The silicon central tracker of the GEM detector has been simulated using the high energy physics simulations code GEANT. This paper will describe the level of detail of the geometry of the tracker that is in the code, including the silicon detectors themselves as well as all non-sensitive volumes such as support structures; the digitization, or detector response to particles, of the silicon detectors; the coordinate reconstruction from the digitizations, and some of the results of the simulations regarding the detector performance.

7326 (LA-UR–93-3528) **Prototype explosives detection system based on nuclear resonance absorption in nitrogen.** Morgado, R.E. (Los Alamos National Lab., NM (United States)); Arnone, G.; Cappiello, C.C.; Gardner, S.D.; Hollas, C.L.; Ussery, L.E.; White, J.M.; Zahrt, J.D.; Krauss, R.A. Los Alamos National Lab., NM (United States). [1993]. 12p. Sponsored by Federal Aviation Administration, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9310164–7: International symposium on substance identification technologies, Innsbruck (Austria), 4-8 Oct 1993). Order Number DE94003979. Source: OSTI; NTIS; GPO Dep.

A-prototype explosives detection system that was developed for experimental evaluation of a nuclear resonance absorption techniques is described. The major subsystems are a proton accelerator and beam transport, high-temperature proton target, an airline-luggage tomographic inspection station, and an image-processing/detection- alarm subsystem. The detection system performance, based on a limited experimental test, is reported.

7327 (LA-UR–93-3588) **The effects of proton beam quality on the production of gamma rays for nuclear resonance absorption in nitrogen.** Morgado, R.E. (and others); Cappiello, C.C.; Dugan, M.P. Los Alamos National Lab., NM (United States). [1993]. 12p. Sponsored by Federal Aviation Administration, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9310164–6: International symposium on substance identification technologies, Innsbruck (Austria), 4-8 Oct 1993). Order Number DE94003977. Source: OSTI; NTIS; GPO Dep.

We describe a method for performing nuclear resonance absorption with the proton beam from a radio frequency quadrupole (RFQ) linear accelerator. The objective was to assess the suitability of the pulsed beam from an RFQ to image nitrogen relative to that of electrostatic accelerators. This choice of accelerator results in tradeoffs in performance and complexity in return for the prospect of higher average current. In spite of a reduced resonance attenuation coefficient in nitrogen, we successfully produced three-dimensional tomographic images of real explosives in luggage the first time the unoptimized system was operated. The results and assessments of our initial laboratory measurements are reported.

7328 (LA-UR–93-3707) **Data acquisition system developed for the resonance absorption project.** Arnone, G.J.; Hollas, C.L. Los Alamos National Lab., NM (United States). [1993]. 5p. Sponsored by Federal Aviation Administration, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-931107–19: 1993 IEEE nuclear science symposium and medical imaging conference, San Francisco, CA (United States), 2-5 Nov 1993). Order Number DE94003973. Source: OSTI; NTIS; GPO Dep.

Minimizing signal errors and losses in high-rate gamma-ray imaging systems places demands on the signal-processing and data acquisition electronics. We will describe the data acquisition system developed for the resonance absorption project and techniques used to minimize dead-time and data losses. The data acquisition system acquires pulse-height spectra from an array of gamma-ray detectors and is made available to multiple processors by using the VMEbus standard to provide concurrent data analysis. A SUN workstation is used to develop the application software and also provides the user interface. We have developed a pulse-height-analysis board that has been optimized for low dead time. By incorporating an independent, high-speed signal channel for each detector, we are able to improve performance over multiplexed techniques.

7329 (LA-UR–93-3748) **Long-Range Alpha Detector (LRAD) sensitivity to beta contamination and soil moisture.** Johnson, J.D.; Allander, K.S.; Bounds, J.A.; Garner, S.E.; Johnson, J.P.; MacArthur, D.W. Los Alamos National Lab., NM (United States). [1993]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-931107–18: 1993 IEEE nuclear science symposium and medical imaging conference, San Francisco, CA (United States), 2-5 Nov 1993). Order Number DE94003972. Source: OSTI; NTIS; INIS; GPO Dep.

Long-Range Alpha Detector (LRAD) systems are designed to monitor alpha contamination by measuring the number of ions in the air. Alpha particles are a form of ionizing radiation and a typical 5-MeV alpha particle will create about 150,000 ion pairs in air. Recent tests have been performed to determine the sensitivity of LRAD systems to beta contamination and soil moisture levels. These results and the general technology are discussed in this paper.

7330 (LBL–33967) **Lithium drifted silicon detector fabrication on gettered Floating-Zone silicon.** Walton, J.T.; Wong, Y.K.; Derhacobian, N.; Haller, E.E. Lawrence Berkeley Lab., CA (United States). Nov 1993. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-931107–15: 1993 IEEE nuclear science symposium and medical imaging conference, San Francisco, CA (United States), 2-5 Nov 1993). Order Number DE94003890. Source: OSTI; NTIS; GPO Dep.

A gettering procedure using phosphorus doped glass is shown to remove lithium-ion precipitation sites from p-type Floating-Zone (FZ) silicon. A model involving interaction between grown-in vacancies and oxidation-injected silicon interstitials is proposed to explain the gettering procedure. Examples of silicon lithium-drifted detectors fabricated on ungettered and gettered FZ silicons are presented.

7331 (LBL–33991) **GAMMASPHERE: Correction technique for detector charge trapping.** Goulding, F.S.; Landis, D.A. Lawrence Berkeley Lab., CA (United States). Nov 1993. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-931107–24: 1993 IEEE nuclear science symposium and medical imaging conference; Institute of Electrical and Electronic Engineers (IEEE) medical imaging conference, San Francisco, CA (United States); San Francisco, CA (United States), 2-5 Nov 1993; 4 Order Number DE94004554. Source: OSTI; NTIS; INIS; GPO Dep.

GAMMASPHERE uses 110 very large germanium detectors. Such detectors exhibit charge trapping effects on energy resolution initially due to a native electron trap that is present in virtually all germanium. Furthermore, radiation damage is a serious problem in GAMMASPHERE experiments, producing hole traps that degrade resolution and eventually require annealing to restore the original performance. The technique discussed here uses the current pulse shape from a detector to develop a parameter related to the radius of the largest interaction in the "track" of a gamma ray in the detector. Since the charge trapping loss in a signal can be related to the distance carriers travel, the "radius" parameter can be used by software to apply a trap correction to the signal.

7332 (LBL–33998) **Microstrip Gas Chambers on glass and ceramic substrates.** Gong, W.G.; Wieman, H.; Harris, J.W.; Mitchell, J.T.; Hong, W.S.; Perez-Mendez, V. Lawrence Berkeley Lab., CA (United States). Nov 1993. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-9311114–9: Institute of Electrical and Electronic Engineers (IEEE) medical imaging conference, San Francisco, CA (United States), 4-6 Nov 1993). Order Number DE94005207. Source: OSTI; NTIS; INIS; GPO Dep.

We report developments of Microstrip Gas Chambers (MSGC) fabricated on glass and ceramic substrates with various resistivities. Low resistivity of the substrate is found to be critical for achieving stable operation of microstrip gas chambers. The microstrip pattern consists of 10 μm wide anodes and 90 μm wide cathodes with a 200 μm anode-to-anode pitch. High-quality microstrips are fabricated using the dry etch after UV-photolithography. Our chambers are tested in an Ar(90)-CH_4(10) gas mixture at atmospheric pressure with a 100 μCi ^{55}Fe source. An energy resolution (FWHM) of 15% has been achieved for 6 keV soft X-rays. At a rate of 5 x 10^4 photons/sec/mm^2, gas gains are stable within a few percents. Long-term tests of gain stability and rate capability are yet to be pursued.

7333 (LBL–34022) **Determination of surface recombination velocity and bulk lifetime in detector grade silicon and germanium crystals.** Derhacobian, N.; Fine, P.; Walton, J.T.; Wong, Y.K.; Rossington, C.S.; Luke, P.N. Lawrence Berkeley Lab., CA (United States). Oct 1993. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-931107–17: 1993 IEEE nuclear science symposium and medical imaging conference, San Francisco, CA (United States), 2-5 Nov 1993). Order Number DE94003886. Source: OSTI; NTIS; INIS; GPO Dep.

Utility of a noncontact photoconductive decay (PCD) technique is demonstrated in measuring bulk lifetime, τ_B, and surface recombination velocity, S, in detector grade silicon and germanium crystals. We show that the simple analytical equations which relate the observed effective lifetimes in PCD transients to τ_B and S have a limited range of applicability. The noncontact PCD technique is used to determine the effect of several surface treatments on the observed effective lifetimes in Si and Ge. A degradation of the effective lifetime in Si is reported as result of the growth of a thin layer of native oxide at room temperature under atmospheric conditions.

7334 (LBL–34663) **X-ray holographic microscopy using the atomic-force microscope.** Howells, M.R. (Lawrence Berkeley Lab., CA (United States)); Jacobsen, C.J.; Lindaas, S. Lawrence Berkeley Lab., CA (United States); State Univ. of New York, Stony Brook, NY (United States). Dept. of Physics. Sep 1993. 15p. Sponsored by USDOE, Washington, DC (United States);National Science Foundation, Washington, DC (United States). DOE Contract AC03-76SF00098 ; FG02-89ER60858. Grant DIR-9006893. (CONF-9309290–1: 4. international conference on x-ray microscopy, Chenogolovka (Russian Federation), 20-24 Sep 1993). Order Number DE94004003. Source: OSTI; NTIS; INIS; GPO Dep.

The present authors have been seeking for some time to improve the resolution of holographic microscopy and have engaged in a continuing series of experiments using the X1A soft x-ray undulator beam line at Brookhaven. The principle strategy for pushing the resolution lower in these experiments has been the use of polymer resists as x-ray detectors and the primary goal has been to develop the technique to become useful for examining wet biological material. In the present paper the authors report on progress in the use of resist for high-spatial-resolution x-ray detection. This is the key step in in-line holography and the one which sets the ultimate limit to the image resolution. The actual recording has always been quite easy, given a high-brightness undulator source, but the difficult step was the readout of the recorded pattern. The authors describe in what follows how they have built a special instrument: an atomic force microscope (AFM) to read holograms recorded in resist. They report the technical reasons for building, rather than buying, such an instrument and they give details of the design and performance of the device. The authors also describe the first attempts to use the system for real holography and the authors show results of both recorded holograms and the corresponding reconstructed images. Finally, the authors try to analyze the effect that these advances are likely to have on the future prospects for success in applications of x-ray holography and the degree to which the other technical systems that are needed for such success are available or within reach.

7335 (LBL–34813) **Amorphous silicon pixel layers with cesium Iodide converters for medical radiography.** Jing, T. (Lawrence Berkeley Lab., CA (United States)); Cho, G.; Goodman, C.A. Lawrence Berkeley Lab., CA (United States). Nov 1993. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-931107–16: 1993 IEEE nuclear science symposium and medical imaging conference, San Francisco, CA (United States), 2-5 Nov 1993). Order Number DE94003887. Source: OSTI; NTIS; INIS; GPO Dep.

We describe the properties of evaporated layers of Cesium Iodide (Thallium activated) deposited on substrates that enable easy coupling to amorphous silicon pixel arrays. The CsI(Tl) layers range in thickness from 65 to 220μm. We used the two-boat evaporator system to deposit CsI(Tl) layers. This system ensures the formation of the scintillator film with homogenous thallium concentration which is essential for optimizing the scintillation light emission efficiency. The Tl concentration was kept to 0.1–0.2 mole percent for the highest light output. Temperature annealing can affect the microstructure as well as light output of the CsI(Tl) film. 200–300C temperature annealing can increase the light output by a factor of two. The amorphous silicon pixel arrays are p-i-n diodes approximately lμm thick with transparent electrodes to enable them

to detect the scintillation light produced by X-rays incident on the CsI(Tl). Digital radiography requires a good spatial resolution. This is accomplished by making the detector pixel size less then 50μm. The light emission from the CsI(Tl) is collimated by techniques involving the deposition process on pattered substrates. We have measured MTF of greater than 12 line pairs per mm at the 10% level.

7336 (LBL–34832) **Potassium dihydrogen phosphate and potassium tantalate niobate pyroelectric materials and far-infrared detectors.** Baumann, H.B. (Lawrence Berkeley Lab., CA (United States)). Lawrence Berkeley Lab., CA (United States). Oct 1993. 72p. Sponsored by National Aeronautics and Space Administration, Washington, DC (United States). DOE Contract AC03-76SF00098. Contract A59513C. Order Number DE94004559. Source: OSTI; NTIS; GPO Dep.

This thesis discusses characterization of two ferroelectric materials and the fabrication of bolometers. Potassium tantalate niobate (KTN) and potassium dihydrogen phosphate (KDP) are chosen because they can be optimized for operation near 100K. Chap. 2 reviews the physics underlying pyroelectric materials and its subclass of ferroelectric materials. Aspects of pyroelectric detection are discussed in Chap. 3 including measurement circuit, noise sources, and effects of materials properties on pyroelectric response. Chap. 4 discusses materials selection and specific characteristics of KTN and KDP; Chap. 5 describes materials preparation; and Chap. 6 presents detector configuration and a thermal analysis of the pyroelectric detector. Electrical techniques used to characterize the materials and devices and results are discussed in Chap. 7 followed by conclusions on feasibility of KDP and KTN pyroelectric detectors in Chap. 8.

7337 (LBL–34899) **High efficiency neutron sensitive amorphous silicon pixel detectors.** Mireshghi, A.; Cho, G.; Drewery, J.S.; Hong, W.S.; Jing, T.; Lee, H.; Kaplan, S.N.; Perez-Mendez, V. Lawrence Berkeley Lab., CA (United States). Nov 1993. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-931107–30: 1993 IEEE nuclear science symposium and medical imaging conference, San Francisco, CA (United States), 2-5 Nov 1993). Order Number DE94005208. Source: OSTI; NTIS; INIS; GPO Dep.

A multi-layer a-Si:H based thermal neutron detector was designed, fabricated and simulated by Monte Carlo method. The detector consists of two PECVD deposited a-Si:H pin detectors interfaced with coated layers of Gd, as a thermal neutron converter. Simulation results indicate that a detector consisting of 2 Gd films with thicknesses of 2 and 4 μm, sandwiched properly with two layers of sufficiently thick ($\sim$30μm) amorphous silicon diodes, has the optimum parameters. The detectors have an intrinsic efficiency of about 42% at a threshold setting of 7000 electrons, with an expected average signal size of $\sim$12000 electrons which is well above the noise. This efficiency will be further increased to nearly 63%, if we use Gd with 50% enrichment in ^{157}Gd. We can fabricate position sensitive detectors with spatial resolution of 300 μm with gamma sensitivity of $\sim 1 \times 10^{-5}$. These detectors are highly radiation resistant and are good candidates for use in various application, where high efficiency, high resolution, gamma insensitive position sensitive neutron detectors are needed.

7338 (NIIYaF-MGU–92-7-256) **Detection of 40-2000 MeV neutrons at the intensive gamma-ray background by means of a CsJ(Tl)-detector during the synchrotron U-70 experiment.** Antipov, A.V.; Belogorlov, E.A.; Bogomolov, A.V.; Britvich, G.I.; Kuptsov, S.I.; Lupenko, G.V.; Myagkova, I.N.; Ryumin, S.P.; Chumakov, A.A. Moskovskij Gosudarstvennyj Univ., Moscow (Russian Federation). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki. 1992. 24p. (In Russian). Order Number DE94610922. Source: OSTI; NTIS (US Sales Only): INIS.

Detector characteristics are investigated for solar neutron detection at cosmic stations. It is shown that usage of the identification method by the shape of scintillation flash is CsI(Tl) provides for reliable discrimination of neutron and γ-quanta in the studied energy range. Estimations are obtained for the identification efficiency of secondary protons and electrons in 13,5-80 MeV. The spectrum of isotopic composition of the products of neutron interaction with Cs and nuclei is estimated. Dependences are calculated of the neutron detection efficiency on the identification circuit threshold for space conditions. 14 refs.; 8 figs.; 1 tab.

7339 (NUREG/CR–6062) **Performance of portable radiation survey instruments.** Eisenhower, E. (Advanced Systems Technology, Inc., Atlanta, GA (United States)); Welch, L.; Wiblin, C. Nuclear Regulatory Commission, Washington, DC (United States). Div. of Regulatory Applications; Advanced Systems Technology, Inc., Atlanta, GA (United States). Dec 1993. 26p. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). Source: OSTI; NTIS; INIS; GPO.

This report examines alleged and documented deficiencies in the performance and the calibration of existing portable radiation survey instruments. This report also examines a limited number of reported overexposures and excessive exposures attributed to instrumentation or calibration problems. The high failure rates in performance testing of a limited number of instruments indicate further testing is needed to demonstrate which instruments are acceptable and for what application. Further, the adequacy of calibration is not demonstrated at this time as many calibrations are performed by nonaccredited calibration laboratories. A review of the regulatory requirements and practices of the NRC and Agreement States regarding the use of existing performance standards such as ANSI N42-17A-1988 and the use of accredited calibration laboratories demonstrates that (1) the regulatory programs do not require compliance with existing industry standards; and (2) instruments are generally not required to be calibrated by accredited laboratories. Options are recommended that might encourage the use of industry performance standards and calibration techniques.

7340 (ORNL/FTR–4683) **Travel to Switzerland to perform data analysis, provide advice concerning the electromagnetic calorimeter level-1 power monitoring system, and particpate in the L3 experiment: Foreign trip report, June 14–30, 1993.** Read, K.F. Oak Ridge National Lab., TN (United States). 19 Jul 1993. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE93018608. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The traveler's duties from June 15 to June 30, 1993, included performing L3 data analysis with emphasis on use of the electromagnetic calorimeter (BGO). The traveler worked with an L3 colleague to perform analysis concerning reconstruction of J/ψ and χ_c mesons. In addition, the traveler attended L3 meetings, both public and private, concerned with both hardware and software issues. The traveler provided advice concerning the BGO level-1 power and temperature monitoring system which the traveler had developed in previous years. The traveler served as L3 shift leader during his shifts and fulfilled his L3 shift allotment for the year. The traveler engaged in discussions to stay abreast of the status of developments of the proposed LHC collider and detectors at CERN.

7341 (PNL–8959) **Evaluation of the Science Applications International Corporation PD-4 electronic dosimeter.** Johnson, M.L. Pacific Northwest Lab., Richland, WA (United States). Nov 1993. 22p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE94004565. Source: OSTI; NTIS; INIS; GPO Dep.

The SAIC PD-4 electronic dosimeter was tested against the criteria given in ANSI N13.27 and for stability and angular response. Based on the results of the testing, the SAIC PD-4 electronic dosimeter is considered acceptable as a supplemental dosimeter for use at the Hanford Site with the following limitations. Though the dosimeter has a rate mode, it may not be used to establish worker dose rates. The dosimeter underresponds at high dose rates and may not be used in dose rate fields that exceed 600 R/h. The dosimeter also underresponds to photon energies less than 70 KeV and should not be used in areas where the external photon dose would be primarily from plutonium and its decay products. Because of the transmitter, the dosimeter has a relatively short battery life. The batteries should be replaced with fresh batteries by trained personnel each time the dosimeter is used (or once each day if used continuously). The requirement that an instrument be returned to the calibration facility for battery changes is waived for this instrument.

7342 (PNL-SA–22101) **Foreign criteria and programs.** Swinth, K.L. (Pacific Northwest Lab., Richland, WA (United States)); Thompson, I.M.G. Pacific Northwest Lab., Richland, WA (United States). Mar 1993. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9303220–3: Workshop on measurement quality assurance for ionizing radiation, Washington, DC (United States), 16-18 Mar 1993). Order Number DE94004362. Source: OSTI; NTIS; INIS; GPO Dep.

The concept of measurement quality assurance (MQA) as embodied in National Institute of Standards and Technology (NIST) programs is not generally used within European programs for testing or accreditation. Although the essential elements of quality control and quality assurance are in the European programs, the concept of testing the capability of the laboratory itself, in terms of its performance for the designated measurements, may not be included. Rather, the European programs use the concept of periodic calibration of laboratory reference standards against the next highest level of standards. Thus, they embody the concept of measurement traceability to appropriate primary standards. Within Europe a series of calibration accreditation programs has been established in the various countries tied together through a multilateral agreement. The radiation measurement programs are based on the International Organization for Standardization (ISO) 9000 series of standards. The purpose of this paper is to outline the overall operation of European Accreditation Programs in the radiation calibration and measurement areas. The operation of the radiation measurement programs of the National Measurement Accreditation Service (NAMAS) in the United Kingdom is described in detail along with other European programs. The manner in which these programs relate to individual dosimetry service programs is also described.

7343 (PNL-SA–22411) **Monte Carlo calculations of low background detector response.** Miley, H.S. Pacific Northwest Lab., Richland, WA (United States). Nov 1993. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-931107–27: 1993 IEEE nuclear science symposium and medical imaging conference, San Francisco, CA (United States), 2-5 Nov 1993). Order Number DE94004593. Source: OSTI; NTIS; INIS; GPO Dep.

An implementation of the Electron Gamma Shower 4 code (EGS4) has been developed to allow convenient simulation of typical gamma ray measurement systems. Coincidence gamma rays, beta spectra, and angular correlations have been added to adequately simulate a complete nuclear decay and provide corrections to experimentally determined detector efficiencies. This code has been used to strip certain low-background spectra for the purpose of extremely low-level assay. Monte Carlo calculations of this sort can be extremely successful since low background detectors are usually free of significant contributions from poorly localized radiation sources, such as cosmic muons, secondary cosmic neutrons, and radioactive construction or shielding materials. Validation of this code has been obtained from a series of comparisons between measurements and blind calculations. The singles counting efficiency of a particular counting experiment was reproduced within the accuracy of the known dimensions of the detector components. This allowed the complete simulation of a nuclear decay, including two coincident gamma rays with a non-isotropic angular correlation. In addition, text-book efficiency curves have been reproduced for several sizes of sodium iodide detectors. Examples of the use and several spectral results are presented.

7344 (SLAC-PUB–5906) **Design and performance of the SLD Vertex Detector, a 120 Mpixel tracking system.** Agnew, G.D. (Brunel Univ., Uxbridge (United Kingdom)); Cotton, R.; Damerell, C.J.S. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Mar 1992. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-920837–46: ICHEP-26: 26th International Union of Pure and Applied Physics (IUPAP) conference on high energy physics, Dallas, TX (United States), 6-12 Aug 1992). Order Number DE94005241. Source: OSTI; NTIS; INIS; GPO Dep.

This paper describes the design, construction, and initial operation of the SLD Vertex Detector, the first device to employ charge coupled devices (CCDs) on a large scale in a high energy physics experiment. The Vertex Detector comprises 480 CCDs, with a total of 120 Mpixels. Each pixel functions as an independent particle detecting element, providing space point measurements of charged particle tracks with a typical precision of 5 μm in each co-ordinate. The CCDs are arranged in four concentric cylinders just outside the beam pipe which surrounds the e^+e^- collision point of the SLAC Linear Collider (SLC). The Vertex Detector is a powerful tool for distinguishing secondary vertex tracks, produced by decay in flight of heavy flavour hadrons or tau leptons, from tracks produced at the primary event vertex. Because the colliding beam environment imposes severe constraints on the design of such a detector, a six year R&D programme was needed to develop solutions to a number of problems. The requirements include a low-mass structure (to minimise multiple scattering) both for mechanical support and to provide signal paths for the CCDS; operation at low temperature with a high degree of mechanical stability; and relatively high speed CCD readout, signal processing, and data sparsification. The lessons learned through the long R&D period should be useful for the construction of large arrays of CCDs or smart pixel devices in the future, in a number of areas of science and technology.

7345 (SLAC-PUB–5970) **Performance of a silicon CCD pixel vertex detector in the SLD.** Strauss, M.G. (Massachusetts Univ., Amherst, MA (United States)). SLD Collaboration. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Oct 1992. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-921122–67: Meeting of the Division of Particles and Fields of the American Physical Society, Batavia, IL (United States), 10-14 Nov 1992). Order Number DE94003461. Source: OSTI; NTIS; INIS; GPO Dep.

We present first results on the performance of a CCD based silicon vertex detector operated in 1992 in the SLC Large Detector (SLD) at the SLAC Linear Collider (SLC). A sample of 11K polarized Z^0 decays have been analyzed. Results on operational experience, alignment techniques, beam and detector backgrounds, and mechanical and thermal stability are presented. In conjunction with the central drift chamber, we present data on tracking and vertexing efficiency, and impact resolution for Z^0 events.

7346 (SLAC-PUB–6267) **Gamma Large Area Silicon Telescope (GLAST): Applying silicon strip detector technology to the detection of gamma rays in space.** Atwood, W.B. The GLAST Collaboration. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Jun 1993. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9305305–1: GLAST silicon detector conference, Hiroshima (Japan), 22-24 May 1993). Order Number DE94003451. Source: OSTI; NTIS; INIS; GPO Dep.

The recent discoveries and excitement generated by space satellite experiment EGRET (presently operating on Compton Gamma Ray Observatory – CGRO) have prompted an investigation into modern detector technologies for the next generation space based gamma ray telescopes. The GLAST proposal is based on silicon strip detectors as the "technology of choice" for space application: no consumables, no gas volume, robust (versus fragile), long lived, and self triggerable. The GLAST detector basically has two components: a tracking module preceding a calorimeter. The tracking module has planes of crossed strip (x,y) 300 μm pitch silicon detectors coupled to a thin radiator to measure the coordinates of converted electron-positron pairs. The gap between the layers (~5 cm) provides a lever arm for track fitting resulting in an angular resolution of $<0.1°$ at high energy. The status of this R & D effort is discussed including details on triggering the instrument, the organization of the detector electronics and readout, and work on computer simulations to model this instrument.

7347 (SLAC-PUB–6352) **A Full-Acceptance Detector (FAD) for the SSC: An Overview.** Bjorken, J.D. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Sep 1993. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9306176–21: Workshop on physics at current accelerators and the supercollider, Argonne, IL (United States), 2-5 Jun 1993). Order Number DE94005232. Source: OSTI; NTIS; INIS; GPO Dep.

This status of the FAD initiative to provide a full-acceptance detector at the SSC is reviewed.

7348 (SLAC-PUB–6376) **CsI electromagnetic calorimeter development for a low or medium energy e^+e^- collider.** King, M.E. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Oct 1993. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9306276–1: 3. international workshop on a tau-charm factory, Marbella (Spain), 1-6 Jun 1993). Order Number DE94003448. Source: OSTI; NTIS; INIS; GPO Dep.

Design considerations for an electromagnetic CsI calorimeter suitable for use at low and medium energy, high-luminosity e^+e^- storage rings are presented, together with results of a test of an array of CsI(Tl) crystals in an e^-/π^- beam (120 to 400 MeV) at TRIUMF. The crystal array used in the test was designed to explore longitudinal and transverse crystal segmentation, and a redundant wavelength-shifter and photodiode readout system. Energy resolution of $(1.69 \pm 0.08)\%/\sqrt{E}$ and $(1.83 \pm 0.05)\%/\sqrt{E}$ was obtained for two different crystal tower configurations. Position resolution of 6.5 (9.0) mm was obtained at 300 (120)MeV for four 4×4 cm^2, 4 rl. CsI crystals.

7349 (SSCL-Preprint–516) **Real-time tracking with a 3D-Flow processor array.** Crosetto, D. Superconducting Super Collider Lab., Dallas, TX (United States). Jun 1993. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC35-89ER40486. (CONF-9306258–14: Workshop on B physics at hadron colliders, Snowmass, CO (United States), 21 Jun - 2 jul 1993). Order Number DE94003981. Source: OSTI; NTIS; INIS; GPO Dep.

The problem of real-time track-finding has been performed to date with CAM (Content Addressable Memories) or with fast coincidence logic, because the processing scheme was thought to have much slower performance. Advances in technology together with a new architectural approach make it feasible to also explore the computing technique for real-time track finding thus giving the advantages of implementing algorithms that can find more parameters such as calculate the sagitta, curvature, pt, etc., with respect to the CAM approach. The report describes real-time track finding using new computing approach technique based on the 3D-Flow array processor system. This system consists of a fixed interconnection architecture scheme, allowing flexible algorithm implementation on a scalable platform. The 3D-Flow parallel processing system for track finding is scalable in size and performance by either increasing the number of processors, or increasing the speed or else the number of pipelined stages. The present article describes the conceptual idea and the design stage of the project.

7350 (SSCL-Preprint–535) **SDC tracking capabilities for B physics.** Coupal, D.P. Superconducting Super Collider Lab., Dallas, TX (United States). Jun 1993. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC35-89ER40486. (CONF-9306258–13: Workshop on B physics at hadron colliders, Snowmass, CO (United States), 21 Jun - 2 jul 1993). Order Number DE94003590. Source: OSTI; NTIS; INIS; GPO Dep.

The $b\bar{b}$ production cross section is estimated to be 1 mb at $\sqrt{s}$ = 40 TeV, implying 10^{12} produced $b\bar{b}$ pairs at an SSC luminosity of $10^{32} cm^{-2} sec^{-1}$ (.1 x design). SDC has the potential to exploit this high rate to explore a-number of B physics topics, in particular, CP violation in the neutral B meson. This note describes the SDC particle tracking design and its predicted performance parameters relevant to B physics.

7351 (BNL–49632) **A step-height standard for surface profiler calibration.** Takacs, P.Z. (Brookhaven National Lab., Upton, NY (United States)); Li, M.X.O.; Furenlid, K.; Church, E.L. Brookhaven National Lab., Upton, NY (United States). Sep 1993. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-930722–55: Annual meeting of the Society of Photo-Optical Instrumentation Engineers (SPIE), San Diego, CA (United States), 11-16 Jul 1993). Order Number DE94004948. Source: OSTI; NTIS; GPO Dep.

We report on the design and fabrication of an all-silicon test pattern that is very useful for assessing the performance of all types of profiling instruments. We present examples of results obtained from applying this method to various kinds of profiling instruments, including a WYKO TOPO 3D system, Microamp Promap 512 profilers, a ZYGO Maxim 3-D system, and scanning probe AFM systems. We also present the results from a measurement of the BRDF of the step with a TMA CASI scatterometer to show the utility of the step as a potential calibration standard for scattered light measuring instruments.

7352 (DOE/ER/61072–7) **The automated rotating shadowband spectroradiometer.** Harrison, L.; Beik, M.A.; Michalsky, J.J. State Univ. of New York, Albany, NY (United States). Atmospheric Sciences Research Center. [1993]. 4p. Sponsored by USDOE, Washington, DC (United States);New York State Energy Research and Development Authority, Albany, NY (United States). DOE Contract FG02-90ER61072 ; AC06-76RL01830. Grant 1725-EEED-IEA-92. (CONF-930346–5: Optical Society of America meeting on optical remote sensing of the atmosphere, Salt Lake City, UT (United States), 8-12 Mar 1993). Order Number DE94001878. Source: OSTI; NTIS; GPO Dep.

We are developing a photodiode array rotating shadowband spectroradiometer (RSS) as part of the Instrument Development Program (IDP) of the Atmospheric Radiation Measurement (ARM) Program of the United States Department of Energy (DOE). This instrument uses the automated rotating shadowband technique to separate and measure the spectrally resolved direct-normal, total horizontal, and diffuse horizontal irradiances in the 360 to 1060 nm wavelength region. It is intended as an instrument for the central facility of each of the cloud and radiation testbed (CART) sites, and will complement the array of multi-filter rotating shadowband radiometers (MFRSR) currently being deployed by ARM and other research programs including TOGA/COARE.

7353 (DOE/ER/61443–2) **Development of a multi-sensor in situ fiber optic fluorometer: Progress report, June 1, 1992–October 31, 1993.** Lohrenz, S.E. (University of Southern Mississippi, Stennis Space Center, MS (United States)); Asper, V.L.; Morris, M.J.; Walters, R.A. University of Southern Mississippi, Stennis Space Center, MS (United States). Nov 1993. 27p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-92ER61443. Order Number DE94003399. Source: OSTI; NTIS; GPO Dep.

Our objective is to develop and evaluate a multi-sensor in situ fiber optic fluorometer. The instruments is designed to sample and store in vivo strobe-stimulated fluorescence data at multiple depths and high frequencies (1 Hz). This information may be used for estimating the distribution and abundance of particulate pigment biomass, for supporting models of water column primary production and as a complement to remotely sensed ocean color estimates of pigment biomass. The instrument is unique in that it uses fiber optic technology to increase vertical resolution. While it is theoretically possible to accomplish this task using a large number of commercially available fluorometers, our proposed design would provide a less expensive approach. Two prototype instruments have been built and are being tested. The first, a single sensor instrument interfaced with a 486 personal computer, has been used to optimize hardware and sensor design and to evaluate fiber performance an instrument detection limits. The second instrument, containing 8 sensors and capable of autonomous operation with time-series data acquisition and storage, was recently deployed in a cruise in the Gulf of Mexico. Preliminary results indicate that the instrument meets all the project goals and that low cost, high frequency, high spatial resolution fluorescence data are obtainable with the current

design. Additional work will focus on further optimization of hardware design and software algorithms, and construction of an additional instrument specifically designed for deployement in the benthic boundary layer.

7354 (FNAL/C–93/339) **Distributing functionality in the Drift Scan Camera System.** Nicinski, T.; Constanta-Fanourakis, P.; MacKinnon, B.; Petravick, D.; Pluquet, C.; Rechenmacher, R.; Sergey, G. Fermi National Accelerator Lab., Batavia, IL (United States). Nov 1993. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-9310239–1: 3. annual conference on astronomical data analysis software and systems, Victoria (Canada), 13-15 Oct 1993). Order Number DE94003640. Source: OSTI; NTIS; INIS; GPO Dep.

The Drift Scan Camera (DSC) System acquires image data from a CCD camera. The DSC is divided physically into two subsystems which are tightly coupled to each other. Functionality is split between these two subsystems: the front-end performs data acquisition while the host subsystem performs near real-time data analysis and control. Yet, through the use of backplane-based Remote Procedure Calls, the feel of one coherent system is preserved. Observers can control data acquisition, archiving to tape, and other functions from the host, but, the front-end can accept these same commands and operate independently. The DSC meets the needs for such robustness and cost-effective computing.

7355 (SAND–92-1107) **Inert strength of pristine silica glass fibers.** Smith, W.L.; Michalske, T.A. Sandia National Labs., Albuquerque, NM (United States). Nov 1993. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. Order Number DE94004685. Source: OSTI; NTIS; GPO Dep.

Silica glass fibers have been produced and tested under ultra high vacuum (UHV) conditions to investigate the inert strength of pristine fibers in absence of reactive agents. Analysis of the coefficient of variation in diameter (v_d) vs the coefficient of variation of breaking strength (v_σ) does not adequately explain the variation of breaking stress. Distribution of fiber tensile strength data suggests that the inert strength of such fibers is not single valued and that the intrinsic strength is controlled by defects in the glass. Furthermore, comparison of room temperature UHV data with LN_2 data indicates that these intrinsic strengths are not temperature dependent.

7356 (SAND–92-1108) **The deposition of boron nitride and carbon films on silica glass fibers.** Smith, W.L.; Michalske, T.A.; Rye, R.R. Sandia National Labs., Albuquerque, NM (United States). Nov 1993. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. Order Number DE94004684. Source: OSTI; NTIS; GPO Dep.

A chemical vapor deposition technique is used to produce amorphous boron nitride and carbon thin films on high strength silica glass fibers. In this method, the fiber is drawn under ultra high vacuum conditions and low pressure process gases, in the presence of a hot tungsten filament, are used to grow films at low substrate temperatures. Films deposited with this technique do not degrade the intrinsic pristine strength of the silica fibers under dry conditions and, when stressed in chemically aggressive environments, act as effective barrier coatings.

7357 (SAND–92-2909) **Holographic interferometry: A user's guide.** Griggs, D. Sandia National Labs., Albuquerque, NM (United States). Oct 1993. 31p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. Order Number DE94003136. Source: OSTI; NTIS; GPO Dep.

This manual describes the procedures and components necessary to produce a holographic interferogram of a flow field in the Sandia National Laboratories hypersonic wind tunnel. In contrast to classical interferometry, holographic interferometry records the amplitude and phase distribution of a lightwave passing through the flow field at some instant of time. This information can then be reconstructed outside the wind tunnel for visual analysis and digital processing, yielding precise characterizations of aerodynamic phenomena. The reconstruction and subsequent hologram image storage process is discussed, with particular attention paid to the digital image processor and the data reduction technique.

7358 (UCRL-JC–114506) **Characterization of physically vapor deposited AF2400 thin films.** Chow, R.; Spragge, M.K.; Loomis, G.E.; Rainer, F.; Ward, R.; Thomas, I.M.; Kozlowski, M.R. Lawrence Livermore National Lab., CA (United States). Nov 1993. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-931108–13: Fall meeting of the Materials Research Society (MRS), Boston, MA (United States), 29 Nov - 3 dec 1993). Order Number DE94004019. Source: OSTI; NTIS; GPO Dep.

Anti-reflective coatings made with Teflon AF2400 had the highest damage thresholds recorded for physical vapor deposited coatings at the Lawrence Livermore National Laboratory damage facility. Physical vapor deposited layers of Teflon AF2400, a perfluorinated amorphous polymer, maintained the bulk optical properties of a high transmittance from 200 nm to 1600 nm, and a low refractive index. In addition, the refractive index can be intentionally reduced by control of two common deposition parameters, deposition rate and substrate temperature. Scanning electron microscopy and nuclear magnetic resonance observations indicated that morphological changes caused the variations in the refractive index rather than compositional changes. The coatings adhered to fused silica and silicon wafers under normal laboratory handling conditions.

7359 (UCRL-JC–115309) **Modelling atmospheric turbulence effects on ground-based telescope systems.** Bradford, L.W. (California Univ., Santa Cruz, CA (United States). Dept. of Physics); Flatte, S.M.; Max, C.E. Lawrence Livermore National Lab., CA (United States). 30 Sep 1993. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9306245–2: North Atlantic Treaty Organization/Advanced Study Institute (NATO/ASI) conference on adaptive optics for astronomy, Cargese (France), 29 Jun - 9 aug 1993). Order Number DE94004211. Source: OSTI; NTIS; GPO Dep.

Questions still exist concerning the appropriate model for turbulence- induced phase fluctuations seen in ground-based telescopes. Bester et al. used a particular observable (slope of the Allan variance) with an infrared interferometer in an attempt to distinguish models. The authors have calculated that observable for Kolmogorov and "random walk" models with a variety of outer scales and altitude-dependent turbulence and wind velocity. The authors have found that clear distinction between models requires good data on the vertical distribution of wind and turbulence. Furthermore, measurements at time separations of order 60 s are necessary to distinguish the "random walk" model from the Kolmogorov model.

7360 (KFK–5068) **Investigations of a coherent vector radar technique for the observation of the atmosphere near 10 GHz.** Graebe, D. Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Technische Physik. Dec 1992. 63p. (In German). Order Number DE94734012. Source: OSTI; NTIS (US Sales Only).

The radar measurement technique is used to an increasing degree for the investigation of the atmosphere. A novel measurement system was built on the basis of a vector network analyzer and its capability has been examined. The main feature of this system is the measurement technique, where the received signal will be analyzed for magnitude and phase. The subsequent fast Fourier transformation provides the representation of the radar echo over the delay time. To characterize the system parameters a reference line has been set up to a mast at a distance of approximately 700 m. First measurements have shown, that static targets with small radar cross sections are detectable. For typically weather appearance like clouds and rain the resolution limit will be shown. Consequences for the design of future measurement systems will be described. (orig.)

This article provides a brief description of electromagnetic traps, used to confine charged particles. These devices are typically used by chemists and physicists today. Here the author considers an application at ISOLDE where two Penning traps are used together for high accuracy mass measurements. The first trap collects the radionuclides, and cools them, compressing their phase space volume. They are then transferred to a second trap, designed for precision measurements. Here the author reviews the basic operation of Penning and Paul (or radio-frequency quadrupole) traps, and touches on features of their operation.

7362 (CONF-9305134–, pp. 63-69) **Development of a dual-sinker densimeter for high-accuracy fluid P-V-T measurements.** McLinden, M.O. (National Institute of Standards and Technology, Boulder, CO (United States)); Frederick, N.V. Argonne National Lab., IL (United States). 1993. DOE Contract AI05-88ER13823. From 11. symposium on energy engineering sciences; Argonne, IL (United States); 3-5 May 1993. In *Eleventh symposium on energy engineering sciences: Proceedings: Solid mechanics and processing: Analysis, measurement and characterization.* 300p. Order Number DE93019930. Source: OSTI; NTIS; INIS; GPO Dep.

A dual-sinker densimeter to very accurately measure the pressure-volume-temperature (P-V-T) properties of fluids over a temperature range of 80 K to 520 K and at pressures up to 35 MPa is in the final stages of development at NIST. The density of a fluid is determined by measuring the difference in the buoyancy forces experienced by two sinkers of identical mass, surface area, and surface material, but very different volumes. The buoyancy forces on the sinkers are transmitted to a semi-microbalance by means of a magnetic suspension coupling. This paper reviews the principle of the measurement and describes the overall design of the system.

7365 (SAND–93-1256C) **Risk-based methods applicable to ranking conceptual designs.** Breeding, R.J. (Sandia National Labs., Albuquerque, NM (United States)); Ortiz, K.; Ringland, J.T.; Lim, J.J. Sandia National Labs., Albuquerque, NM (United States). [1993]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-940312–44: 2. Probabilistic safety assessment and management conference (PSAM), San Diego, CA (United States), 20-24 Mar 1994). Order Number DE94002920. Source: OSTI; NTIS; GPO Dep.

In Ginichi Taguchi's latest book on quality engineering, an emphasis is placed on robust design processes in which quality engineering techniques are brought "upstream," that is, they are utilized as early as possible, preferably in the conceptual design stage. This approach was used in a study of possible future safety system designs for weapons. As an experiment, a method was developed for using probabilistic risk analysis (PRA) techniques to rank conceptual designs for performance against a safety metric for ultimate incorporation into a Pugh matrix evaluation. This represents a high-level UW application of PRA methods to weapons. As with most conceptual designs, details of the implementation were not yet developed; many of the components had never been built, let alone tested. Therefore, our application of risk assessment methods was forced to be at such a high level that the entire evaluation could be performed on a spreadsheet. Nonetheless, the method produced numerical estimates of safety in a manner that was consistent, reproducible, and scrutable. The results enabled us to rank designs to identify areas where returns on research efforts would be the greatest. The numerical estimates were calibrated against what is achievable by current weapon safety systems. The use of expert judgement is inescapable, but these judgements are explicit and the method is easily implemented on an spreadsheet computer program.

7366 (UCRL-JC–112576) **A model for fuel fire duration and application to the B-1B bomber.** Magnoli, D.E. Lawrence Livermore National Lab., CA (United States). Oct 1993. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-940312–18: 2. Probabilistic safety assessment and management conference (PSAM), San Diego, CA (United States), 20-24 Mar 1994). Order Number DE94001610. Source: OSTI; NTIS (US Sales Only); GPO Dep.

A model for determining the duration of a fuel-spill fire was developed. The scenario is that a parked fuel-and-weapon-laden system suffers damage that includes a hole in a fuel tank and that the spilling fuel ignites. Duration of the whole fire is not the focus of the model. What is of interest is duration at a nearby weapon storage point, which may be significantly remote from the spill location. The model derives duration as a function of several parameters, including the size of the fuel spill hole, the distance between the spill point and the point of interest, the amount of fuel available, and the form of the fuel tank that is spilling fuel. The effects of wind and of fire-fighting efforts are not considered in this study. Spilling from more than one fuel tank is not examined. The model is applied to the B-1B bomber. Model application to a specific system fixes some of the parameters. Fire duration at the weapons bays can thus be derived as a function of (1) the size of the hole from which the fuel is spilling and (2) the spill location on the aircraft. Parameter 1 determines how fast the fuel spills and thus how large the fire will be. Parameter 2 determines which tank the hole is in and therefore how much fuel is available, how much hydrostatic head there is, and how far the hole is from the weapons bay.

4501 Chemical Explosions and Explosives

7367 (LA-UR–93-2080) **Mach reflection of spherical detonation waves.** Hull, L.M. Los Alamos National Lab., NM (United States). [1993]. 9p. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-940312–4: 2. Probabilistic safety assessment and management conference (PSAM), San Diego, CA (United States), 20-24 Mar 1994). Order Number DE93016604. Source: OSTI; NTIS; INIS; GPO Dep.

When two detonation waves collide, the shape of the wave front at their intersection can be used to categorize the flow as regular or irregular reflection. In the case of regular reflection, the intersection of the waves forms a cusp. In the case of irregular reflection, the cusp is replaced by a leading shock locus that bridges the incident waves. Many workers have studied irregular or Mach reflection of detonation waves, but most of the their experimental work has focused on the interaction of plane detonation waves.

Reflection of spherical detonation waves has received less attention. This study also differs from previous work in that the focus is to measure the relationship between the detonation velocity and the local wave curvatue for irregular reflection of spherical detonation waves. Two explosives with different detonation properties, PBX 9501 and PBX 9502, are compared.

7368 **Insensitive explosive.** Lee, Kien-yin; Storm, C.B. To Dept. of Energy. 1991. U.S. patent application 7-767,603. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE94003050. Source: OSTI; NTIS; GPO Dep.

This invention relates to the field of chemistry and, more particularly, to explosives. This invention is the result of a contract with the Department of Energy (Contract No. W-7405-ENG-36). It is desirable to use explosives in weapons and other applications which are less sensitive than the common explosives RDX, TNT, and HMX, since there have been catastrophic explosions of munitions which use these compounds. In preliminary characterization and sensitivity testing, it has been found that 3-amino-5-nitro-1,2,4-triazole (ANTA) is a promising insensitive high explosive. This report details the safety, production, and physical properties of ANTA.

7369 (SAND–92 2662C) **Examination of phase transformations and decomposition chemistry in thermally aged thin-film explosives.** Erickson, K.L.; Trott, W.M.; Renlund, A.M. Sandia National Labs., Albuquerque, NM (United States). [1993]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. (CONF-9305189–6: 1993 joint Army, Navy, NASA, Air Force (JANNAF) Propulsion Systems Hazards Subcommittee meeting, Ft. Lewis, WA (United States), 10-14 May 1993). Order Number DE93040054. Source: OSTI; NTIS; GPO Dep.

To develop predictive models for the response of weapon systems to abnormal thermal environments, such as cookoff, an improved understanding of temperature-dependent thermophysical phenomena (such as phase transformations) and decomposition chemistry in totally confined explosive samples is needed. It is particularly important to examine the effects of maintaining-intimate contact between the decomposition products and the remaining condensed-phase explosive during slow reaction at elevated temperatures since confinement of the decomposition products may significantly affect thermophysical phenomena and decomposition reaction rates. The purpose of this work has been to examine experimentally the effects on condensed-phase chemistry which result when decomposition products remain in intimate contact with the reacting explosive during isothermal aging experiments at temperatures below those of the DTA exctherm for the explosive. To provide confinement, minimize vapor space, and permit condensed-phase chemical analysis, experiments were done using thin-film samples of the explosive, which were pressed and sealed between two infrared-transmitting windows, so that condensed-phase chemistry could be monitored using infrared spectroscopy. Experiments were done with NC, HMX, HMX-NC composite, and RDX samples. Results from the experiments with NC showed that for some decomposition mechanisms, the reaction rates for confined samples compared favorably with published reaction rates from unconfined samples. However, the results also demonstrated that for other mechanisms, the reaction rates were significantly affected by confinement of the decomposition products. The experiments with HMX and RDX indicated that some decomposition occurred at temperatures well below the temperatures of the respective DTA exotherms, and the experiments with HMX-NC composite samples showed some interaction between NC and HMX at temperatures as low as 150°C.

7370 (SAND–93-2568C) **Blasting, graphical interfaces and Unix.** Knudsen, S. (RE/SPEC, Inc., Albuquerque, NM (United States)); Preece, D.S. Sandia National Labs., Albuquerque, NM (United States). [1993]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-940144–2: 20. annual Society of Explosives Engineers meeting on explosives and blasting techniques, Austin, TX (United States), 30 Jan - 2 feb 1994). Order Number DE94003102. Source: OSTI; NTIS; GPO Dep.

A discrete element computer program, DMC (Distinct Motion Code) was developed to simulate blast-induced rock motion. To simplify the complex task of entering material and explosive design parameters as well as bench configuration, a full-featured graphical interface has been developed. DMC is currently executed on both Sun SPARCstation 2 and Sun SPARCstation 10 platforms and routinely used to model bench and crater blasting problems. This paper will document the design and development of the full-featured interface to DMC. The development of the interface will be tracked through the various stages, highlighting the adjustments made to allow the necessary parameters to be entered in terms and units that field blasters understand. The paper also discusses a novel way of entering non-integer numbers and the techniques necessary to display blasting parameters in an understandable visual manner. A video presentation will demonstrate the graphics interface and explains its use.

7371 (UCRL-ID–114715) **Fuel fire test results for RX-08-FK in a toroidal composite vessel.** Black, W. (Lawrence Livermore National Lab., CA (United States)); Bretl, D.; von Holtz, E.; Didlake, J.; Ferrario, M.; Spingarn, J.; Schwegel, J. Lawrence Livermore National Lab., CA (United States); Sandia National Labs., Livermore, CA (United States). Jul 1993. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48 ; AC04-76DP00789. Order Number DE94003863. Source: OSTI; NTIS; GPO Dep.

A fuel first test was conducted on October 15, 1992, during which a toroidal composite vessel containing 6.5 kg of RX-08-FK Paste Extrudable Explosive was subjected to a dynamic (transient) thermal environment. The vessel was mounted inside a closed, but vented, thin-walled steel cylinder, and the entire assembly was then engulfed in a fuel fire. Approximately 5 minutes into the test, the PEX began to burn. At the time reaction of PEX occurred, temperatures of the inside wall of the steel cylinder were 815C and temperatures on outside wall of the composite vessel ranged from 163–454C. Subsequently, temperatures in excess of 950C were reached inside the cylinder for tens of minutes. Based on criteria set forth in MIL-STD-1648A(AS), the RX-08-FK-loaded vessel passed the fuel fire test, because no violent reaction beyond burning was observed.

7372 (UCRL-JC–113295) **Unlike pair interactions in N_2-H_2O mixtures.** van Thiel, M.; Ree, F.H. Lawrence Livermore National Lab., CA (United States). Jul 1993. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-930676–66: 14. international conference of the International Association for the Advancement of High Pressure Science and Technology, Colorado Springs, CO (United States), 27 Jun - 2 jul 1993). Order Number DE94004867. Source: OSTI; NTIS; INIS; GPO Dep.

Statisical-mechanical chemical equilibrium calculations have been performed to determined the deviation of the unlike species potential from that predicted by the Lorentz-Berthelot rule. The potentials of the water-water and nitrogen-nitrogen interactions have been reexamined in the light of remaining deviations from experiment. The resulting deviation of the constant from one (1), in the extended Lorentz-Berthelot rule, is determined from the best exp-6 potentials for nitrogen and water with consideration of possible deviations of the measured detonation velocity of RX-23-AB from its ideal equilibrium value.

Representatives from LLNL, LANL, SNL, Arzamas-16, and Chelyabinsk-70 attended the Second Computer Modeling Conference of Russian and US Weapons Laboratories at Arzamas-16,

Russia. The Russians are still building shock physics and radiation transport codes appropriate for weapons design. They are hampered by their weak computers. They are routinely using parallel computers. They have are large pool of code developers and analysts. Some of their algorithms are more advanced than those in the US. I visited experimental impact physics facilities Russia and Germany to discuss projects with collaborators.

7374 (PNL-SA–22307) **The use of benchmarking at the U.S. Department of Energy's Pantex Plant.** Anderson, F.G. (Mason and Hanger-Silas Mason Co., Inc., Amarillo, TX (United States)); Burling, J.; Moncivais, G.C.; Skelton, R.; Fulton, J.T.; Hostick, C.J.; Tuttle, T. Pacific Northwest Lab., Richland, WA (United States). Sep 1993. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Source: OSTI; NTIS; GPO Dep.

The U.S. Department of Energy's (DOE's) Pantex Plant, located in Amarillo, Texas, is responsible for the assembly, stockpile maintenance, and disassembly of nuclear weapons. Pantex is operated by the Mason and Hanger-Silas Mason Co., Inc. The following summarizes the pilot study that was designed to establish Pantex as a leader in using the continuous improvement tool of benchmarking within the DOE's Nuclear Weapon Complex (NWC). The pilot study was conducted with Mason and Hanger-Silas Mason Co. and Pacific Northwest Laboratory (PNL) personnel during 1992.

7375 (SAND–93-1235C) **Development of fast-running thermal and structural response models for probabilistic analysis of complex systems.** Benjamin, A.S.; Brown, N.N. Sandia National Labs., Albuquerque, NM (United States). [1993]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-940312–27: 2. Probabilistic safety assessment and management conference (PSAM), San Diego, CA (United States), 20-24 Mar 1994). Order Number DE94001826. Source: OSTI; NTIS; GPO Dep.

This paper describes two fast-running physical response algorithms, which were developed for the analysis of nuclear detonation pathways in nuclear weapons systems exposed to fires and crashes but which can be used for other applications such as probabilistic structural analyses of civil systems exposed to dynamic loadings and the dynamic analyses of nuclear reactors exposed to external events. The first is embodied in a computer code called Thermal Evaluation and Matching Program for Risk Applications (TEMPRA-3D). The second is contained in a computer code entitled Spring-mass Transient Response Evaluation for Structural Systems (STRESS-3D). TEMPRA-3D is a lumped-capacitance thermal analysis code that is extremely fast running and unconditionally stable. It contains fully integrated numerical models for many phenomena of interest in the evaluation of system responses, including thermal conduction, thermal radiation, thermal convection, chemical reactions, and material decomposition. The code is capable of calculating the timing of important events, such as component failures or the ignition of explosives. If uncertainty distributions are provided, it computes pairwise probabilities. STRESS-3D is a dynamical structural analysis code that models a system as a connection of masses and nonlinear springs. The principal functions of STRESS-3D are to calculate the dynamic responses to various types of impacts, focusing upon the stresses and strains in shell-like structures and the mean accelerations and displacements of solid components. Some of the key features of the code are: (1) explicit integration of Newton's law of motion for each mass; (2) spring forces evaluated form constitutive relationships and appropriate areas; (3) characterization of strain-hardening in inelastic materials and compressive load-bearing capability of foam materials; and (4) innovative modeling of shells.

7376 (SAND–93-1236C) **Development of smart searching algorithms for vulnerability and uncertainty analyses in probabilistic risk assessments.** Benjamin, A.S. Sandia National Labs., Albuquerque, NM (United States). [1993]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000 ; AC04-76DP00789. (CONF-940312–33: 2. Probabilistic safety assessment and management conference (PSAM), San Diego, CA (United States), 20-24 Mar 1994). Order Number DE94001825. Source: OSTI; NTIS; GPO Dep.

In order to evaluate the risk inherent in a complex system, including a reasonable accounting of the many uncertainties that characterize both the environments to which the system is exposed and the responses of the system to these environments, risk analysts are forced to use statistical approaches. If the system is very well designed for safety, then simple convolution or sampling approaches may have to be augmented by intelligent searching schemes. An excellent example is the prediction of the probability of an accidental nuclear detonation for a nuclear weapon system. Under practically all situations, accidental nuclear detonation is virtually impossible because modern nuclear weapon systems are designed to preclude it. They have a series of strong links and weak links that are guaranteed to fail in a prescribed order when exposed to virtually all credible abnormal environments, such as fires, impacts, punctures, crushes, external pressures, lightning or chemical attack. However, no engineered system is perfect, and under certain peculiar conditions involving combined environments that are spatially directs in the worst possible way, the strong links may fail before the weak links and an accidental nuclear detonation may conditions through an intelligent searching process and to determine whether their probability of occurrence is high enough to be of concern. In the weapon system application, LHS generates millions of sample members, each consisting of a different set of parameter values, and we must employ intelligent searching techniques to reduce this set to a more workable number. We do this through a discriminator subprocess, which we will describe.

7377 (SAND–93-2088) **Stockpile Dismantlement Database Training Materials.** Sandia National Labs., Albuquerque, NM (United States). Nov 1993. 356p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. Order Number DE94003689. Source: OSTI; NTIS; GPO Dep.

This document, the Stockpile Dismantlement Database (SDDB) training materials is designed to familiarize the user with the SDDB windowing system and the data entry steps for Component Characterization for Disposition. The foundation of information required for every part is depicted by using numbered graphic and text steps. The individual entering data is lead step by step through generic and specific examples. These training materials are intended to be supplements to individual on-the-job training.

7378 (SAND–93-2173C) **Nuclear weapon system risk assessment.** Carlson, D.D. Sandia National Labs., Albuquerque, NM (United States). [1993]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-940312–32: 2. Probabilistic safety assessment and management conference (PSAM), San Diego, CA (United States), 20-24 Mar 1994). Order Number DE94001830. Source: OSTI; NTIS; GPO Dep.

Probabilistic risk assessment (PRA) is a process for evaluating hazardous operations by considering what can go wrong, the likelihood of these undesired events, and the resultant consequences. Techniques used in PRA originated in the 1960s. Although there were early exploratory applications to nuclear weapons and other technologies, the first major application of these techniques was in the Reactor Safety Study, WASH-1400, [1] in which the risks of nuclear power accidents were thoroughly investigated for the first time. Recently, these techniques have begun to be adapted to nuclear weapon system applications. This report discusses this application to nuclear weapon systems.

7379 (UCRL-ID–115283) **Analysis of spark-induced bubble experiments using CALE.** Simonson, S.C. III; McAllister, S.W. Lawrence Livermore National Lab., CA (United States). Oct 1993. 69p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE94003667. Source: OSTI; NTIS; GPO Dep.

Calculations were made using the 2-D hydrodynamics code CALE of underwater bubble oscillations and collapse for two situations of interest in the development of underwater acoustic sources. The first is the case of a single bubble to which energy is added to prolong oscillations. The second is the case of a three-bubble array, which typifies one end element in a linear array.

Comparisons were made with a series of experiments with spark-induced bubbles carried out at Tetra Corp. The bubbles were made at a depth of 64 cm with periods of about 400 μs. Onedimensional calculations were used to study single bubbles. The 1-D results showed that energy needs to be added at a precise phase in order to promote bubble re-excitation. The experiments showed evidence of losses caused by interaction with the relatively large electrodes upon collapse, leading to a 50 percent reduction in amplitude and period of the second oscillation. When a second discharge was made at the end of the first o on, the next osculation had 80 percent of the amplitude of the first. This can be interpreted either as formation of a new bubble, or as pumping the previous bubble, both occurring in a disturbed environment. Two-dimensional calculations were used to study the three-bubble array. The 2-D results showed significant interaction between the central and side bubbles, leading to jetting. For the particular combination of size and spacing used, jetting occurred in the third oscillation of the bubbles.

7380 (UCRL-ID–115681) **Computer simulations of WIGWAM underwater experiment.** Kamegai, Minao; White, J.W. Lawrence Livermore National Lab., CA (United States). Nov 1993. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE94004226. Source: OSTI; NTIS; GPO Dep.

We performed computer simulations of the WIGWAM underwater experiment with a 2-D hydro-code, CALE. First, we calculated the bubble pulse and the signal strength at the closest gauge in one-dimensional geometry. The calculation shows excellent agreement with the measured data. Next, we made two-dimensional simulations of WIGWAM applying the gravity over-pressure, and calculated the signals at three selected gauge locations where measurements were recorded. The computed peak pressures at those gauge locations come well within the 15% experimental error bars. The signal at the farthest gauge is of the order of 200 bars. This is significant, because at this pressure the CALE output can be linked to a hydro-acoustics computer program, NPE Code (Nonlinear Progressive Wave-equation Code), to analyze the long distance propagation of acoustical signals from the underwater explosions on a global scale.

7381 (UCRL-JC–114200) **WESVA: A decision aid for comparing warhead advanced surety R&D options.** Homsy, R.V.; Sicherman, A.; Stephens, D.R. Lawrence Livermore National Lab., CA (United States). Oct 1993. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-940312–24: 2. Probabilistic safety assessment and management conference (PSAM), San Diego, CA (United States), 20-24 Mar 1994). Order Number DE94001764. Source: OSTI; NTIS; INIS; GPO Dep.

Newly designed warheads that incorporate advanced surety concepts can reduce the risks of accidental radiological material dispersal, nuclear detonation, and unauthorized use. But these potential surety benefits entail cost and performance penalties. Present constraints on R&D budgets, time, and allowable nuclear tests also create significant uncertainties as to whether new concepts can be successfully developed and implemented. These factors complicate the decisions involved in selecting surety concepts for more extensive R&D. To help decision makers compare R&D options, we developed a decision aid called Weapon Safety Value Assessment (WESVA). This paper describes WESVA and suggests how a WESVA-like approach can be of interest in other decision-making contexts.

7382 (UCRL-JC–115269) **Probabilistic cost-benefit analysis of enhanced safety features for strategic nuclear weapons at a representative location.** Stephens, D.R.; Hall, C.H.; Holman, G.S.; Graham, K.F.; Harvey, T.F.; Serduke, F.J.D. Lawrence Livermore National Lab., CA (United States). Oct 1993. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-940312–21: 2. Probabilistic safety assessment and management conference (PSAM), San Diego, CA (United States), 20-24 Mar 1994). Order Number DE94001765. Source: OSTI; NTIS; GPO Dep.

We carried out a demonstration analysis of the value of developing and implementing enhanced safety features for nuclear weapons in the US stockpile. We modified an approach that the Nuclear Regulatory Commission (NRC) developed in response to a congressional directive that NRC assess the "value-impact" of regulatory actions for commercial nuclear power plants. Because improving weapon safety shares some basic objectives with NRC regulations, i.e., protecting public health and safety from the effects of accidents involving radioactive materials, we believe the NRC approach to be appropriate for evaluating weapons-safety cost-benefit issues. Impact analysis includes not only direct costs associated with retrofitting the weapon system, but also the expected costs (or economic risks) that are avoided by the action, i.e., the benefits.

7383 (UCRL-JC–115404) **The integration of human factors into the risk assessment of a nuclear device arming and firing system.** Altenbach, T.; Ferrell, W. Lawrence Livermore National Lab., CA (United States). 10 Oct 1993. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-940312–17: 2. Probabilistic safety assessment and management conference (PSAM), San Diego, CA (United States), 20-24 Mar 1994). Order Number DE94001606. Source: OSTI; NTIS (US Sales Only); GPO Dep.

This study is concerned with the potential for the release of plutonium from a nuclear device due to hardware component failures, human errors, and/or external natural phenomena affecting the A&F system. Intentional human actions such as sabotage or terrorist subversion were excluded from this analysis. The time period of concern begins when the device and the A&F equipment are located physically adjacent at ground zero, until the device is fully stemmed. This time period is divided into the following phases: device delivery and installation, hot dry run testing, and device insertion. Dispersal following a detonation of the device high explosive is the only release mode considered, and no attempt was made to estimate the consequences of a dispersal.

4505 Strategic Defense Initiative

7384 (LA-SUB–93-263) **Object Tracking and Designation (OTD): Final report, Phase 2.** Los Alamos National Lab., NM (United States); Strategic Defense Initiative Organization, Washington, DC (United States). Nov 1990. 16p. Sponsored by Department of Defense, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE94002566. Source: OSTI; NTIS; GPO Dep.

We demonstrated on the Object Tracking and Designation (OTD) project, the effectiveness of the 001 technology to the development of complex scientifically-oriented applications for SDI. This document summarizes the results of the project. In the OTD system, Object sightings from Measurement Processing are sorted by Object Sorting into azimuth/elevation bins, then passed to Object Screening. Object Screening separates sightings which are part of an established track from those for which no track has been established. In Process Sighting, sightings determined to be part of established tracks are sent to Update Tracks; uncorrelated sightings are sent to Generate Tracks. Generate Tracks first performs a rate smoothing of the data in Rate Smoothing. In Candidate Track Selection (CTS) uncorrelated sightings are compared with the previous five to seven frames. Those sightings which can be put together to form a candidate ballistic trajectory are sent to the Trajectory Fitting process. In the Trajectory Fitting process, candidate tracks are fitted to precision trajectories. Valid trajectories are sent to Radiometric Discriminant Initialization in the form of a new track message, and object sightings making up the trajectory are removed from the Object Sighting data structure. In Radiometric Discriminant Initialization, radiometric discriminants are produced from the new track message and the resulting discriminant values used to initialize a track record in the Object Track File data structure which is passed to the Prediction function. The Metric Discrimination process uses angle data to determine object lethality. The object's designation is then sent to the Prediction process. In the Prediction process the track's position and uncertainty on the next frame is predicted based upon a coefficient corresponding to the object's estimated class and on the expected interception of the track and the scanner on the next frame.

7385 (DOE/FTR–93017644) **Travel to Japan for meetings on global environmental challenges and industrial pollution control: Foreign trip report, November 1–16, 1991.** Tischer, R.E. USDOE Pittsburgh Energy Technology Center, PA (United States). 18 Dec 1991. 16p. Sponsored by USDOE, Washington, DC (United States). Order Number DE93017644. Source: OSTI; NTIS (US Sales Only); GPO Dep.

Richard E. Tischer, Project Manager, US Department of Energy, Pittsburgh Energy Technology Center (DOE/PETC;FTS 723-4891) visited Japan on November 1–16, 1991. The purpose of this trip was threefold: (1) to participate in an International Energy Agency (IEA) International Conference on Technology Responses to Global Environmental Challenges held in Kyoto; (2) to participate in the Third DOE-PETC/Agency of Natural Resources and Energy (ANRE)-Electric Power Development Company (EPDC) Technical meeting and the Fourth DOE-PETC/Ministry of International Trade and Industry (MITI)-ANRE Subcommittee meeting on Pollution Control Technology held in Tokyo; and (3) to visit three sites carrying out ANRE-sponsored R&D, which were located in the Nagasaki Prefecture. Representatives from four US industrial and research organizations participated, at their own expense, in the Tokyo meeting and site tours.

7386 (UCRL-ID–114900) **Introduction to the nuclear criticality safety evaluation of facility X-705, Portsmouth Gaseous Diffusion Plant.** Sheaffer, M.K.; Keeton, S.C. Lawrence Livermore National Lab., CA (United States). 16 Aug 1993. 42p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE94004806. Source: OSTI; NTIS; INIS; GPO Dep.

This report is the first in a series of documents that will evaluate nuclear criticality safety in the Decontamination and Recovery Facility, X-705, Portsmouth Gaseous Diffusion Plant. It provides an overview of the facility, categorizes its functions for future analysis, reviews existing NCS documentation, and explains the follow-on effort planned for X-705. A detailed breakdown of systems, subsystems, and operational areas is presented and cross-referenced to existing NCS documentation.

Source: OSTI; NTIS; GPO Dep.

As part of the Southern Oxidant Study (SOS) (UCAR, 1990), Brookhaven National Laboratory operated a "SENIOR" (South Eastern Network for Intensive Ozone Research) measurement site on a campaign basis during parts of the summers of 1991 and 1992. Measurements were made for the purpose of understanding the pervasive high levels of O_3 observed in the southeastern US (Meagher et al, 1987 Aneja et al, 1990; NRC, 1991). In this article the authors focus on the 1992 observations of O_3 and the predication of O_3 formation rates based on a radical budget calculation and based on the photostationary state.

7388 (BNL–49690) **The validation of ATSR measurements with in situ sea temperatures.** Minnett, P.J. (Brookhaven National Lab., Upton, NY (United States)); Stansfield, K.L. Brookhaven National Lab., Upton, NY (United States). 8 Oct 1993. 6p. Sponsored by USDOE, Washington, DC (United States);National Oceanic and Atmospheric Administration, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-9310231–1: 2. ERS symposium on space at the service of our environment, Hamburg (Germany), 11-14 Oct 1993). Order Number DE94003195. Source: OSTI; NTIS; GPO Dep.

The largest source of uncertainty in the retrieval of SST (sea-surface) temperature from space-borne infrared radiometric measurements is in the correction for the effects of the intervening atmosphere. During a research cruise of the R/V Alliance measurements of sea surface temperature, surface meteorological variables and surface infrared radiances were taken. SST fields were generated from the ATSR data using pre-launch algorithims derived by the ATSR Instrument Team (A.M. Zavody, personal communication), and the initial comparison between ATSR measurements and SST taken along the ship's track indicate that the dual-angle atmospheric correction is accurate in mid-latitude conditions.

7389 (CONF-9306266–) **White House Conference on Global Climate Change.** USDOE, Washington, DC (United States). [1993]. 102p. Sponsored by USDOE, Washington, DC (United States). From Global climate change; Washington, DC (United States); 10-11 Jun 1993. Source: OSTI (Free of Charge).

President Clinton has directed the White House office on Environmental Policy to coordinate an interagency process to develop a plan to fulfill the commitment he made in his Earth Day address on April 21, 1993. This plan will become the cornerstone of the Climate Change Plan that will be completed shortly after the Rio Accord enters into force. The Office on Environmental Policy established the Interagency Climate Change Mitigation Group to draw on the expertise of federal agencies including the National Economic Council; the Council of Economic Advisors; the Office of Science and Technology Policy; the Office of Management and Budget; the National Security Council; the Domestic Policy Council; the Environmental Protection Agency; and the Departments of Energy, Transportation, Agriculture, Interior, Treasury, Commerce, and State. Working groups have been established to examine six key policy areas: energy demand, energy supply, joint implementation, methane and other gases, sinks, and transportation. The purpose of the White House Conference on Global Climate Change was to "tap the real-world experiences" of diverse participants and seek ideas and information for meeting the President's goals. During the opening session, senior administration officials defined the challenge ahead and encouraged open and frank conversation about the best possible ways to meet it.

7390 (DOE/CE/23810–22E) **ARTI Refrigerant Database: [Quarterly progress report, 1 July 1993–30 September 1993].** Calm, J.M. Calm (James M.), Great Falls, VA (United States). 28 Nov 1993. 159p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91CE23810. Order Number DE94004906. Source: OSTI; NTIS; GPO Dep.

The Refrigerant Database consolidates and facilitates access to information to assist industry in developing equipment using alternative refrigerants. The underlying purpose is to accelerate phase out of chemical compounds of environmental concern. The database provides bibliographic citations and abstracts for publications that may be useful in research and design of air-conditioning and refrigeration equipment. The complete documents are not included, though some may be added at a later date. The database identifies sources of specific information on R-32, R-123, R-124, R-125, R-134, R134a, R-141b, R-142b, R-143a, R-152a, R-227ea, R-245ca, R-290 (propane), R-717 (ammonia), ethers, and others as well as azeotropic and zeotropic blends of these fluids. It addresses lubricants including alkylbenzene, polyalkylene glycol, polyol ester, and other synthetics as well as mineral oils. It also references documents addressing compatibility of refrigerants and lubricants with metals, plastics, elastomers, motor insulation, and other materials used in refrigerant circuits. Incomplete citations or abstracts are provided for some documents. They are included to

accelerate availability of the information and will be completed or replaced in future updates.

7391 (DOE/ER–0597T) **Global Change Research: Summaries of research in FY 1993.** USDOE Office of Energy Research, Washington, DC (United States). Oct 1993. 230p. Sponsored by USDOE, Washington, DC (United States). Order Number DE94003150. Source: OSTI; NTIS; GPO Dep.

This document describes the activities and products of the Global Research Program in FY 1993. This publication describes all of the projects funded by the Environmental Sciences Division of DOE under annual contracts, grants, and interagency agreements in FY 1993. Each description contains the project's title; its 3-year funding history (in thousands of dollars); the period over which the funding applies; the name(s) of the principal investigator(s); the institution(s) conducting the projects; and the project's objectives, products, approach, and results to date (for most projects older than 1 year). Project descriptions are categorized within the report according to program areas: climate modeling, quantitative links, global carbon cycle, vegetation research, ocean research, economics of global climate change, education, information and integration, and NIGEC. Within these categories, the descriptions are grouped alphabetically by principal investigator. Each program area is preceded by a brief text that defines the program area, states its goals and objectives, lists principal research questions, and identifies program managers.

7392 (DOE/ER/61010–T9) **Formation and emission of methane in rice soils: Experimental determination and modeling analysis: Final report.** Law, V.J.; Bhattacharya, S.K. California Univ., Davis, CA (United States). 31 Aug 1993. 20p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FC03-90ER61010. Order Number DE93040720. Source: OSTI; NTIS; GPO Dep.

Rice paddy soils have been identified as a major source of methane emissions contributing to the observed atmospheric increase in methane. This points to the need for a method of quantifying and predicting methane emissions for the widely varying conditions used in rice agriculture throughout the world. In the present work, a mathematical model for estimating the emission of methane from rice paddy soils is developed and refined. Kinetic parameters for methanogenesis in a Louisiana rice soil are determined from laboratory data on methane production from acetic acid substrate. Use of a stirred reactor allows simultaneous measurement of acetate consumption and methane production while minimizing mass transfer limitations. An existing model for rice plant growth is utilized to provide data on the availability of root exudates as a carbon source for the methanogens. The final methane model includes the kinetic parameters, plant data, and estimated transport parameters. With adjustments in these parameters, it provides an acceptable match to field data.

7393 (DOE/ER/61010–T10) **Methane emissions from natural wetlands.** Meyer, J.L. (Georgia Univ., Athens, GA (United States)); Burke, R.A. Jr. California Univ., Davis, CA (United States). [1993]. 19p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FC03-90ER61010. Order Number DE93040796. Source: OSTI; NTIS; GPO Dep.

Analyses of air trapped in polar ice cores in conjunction with recent atmospheric measurements, indicate that the atmospheric methane concentration increased by about 250% during the past two or three hundred years (Rasmussen and Khalil, 1984). Because methane is a potent "greenhouse" gas, the increasing concentrations are expected to contribute to global warning (Dickinson and Cicerone, 1986). The timing of the methane increase suggests that it is related to the rapid growth of the human population and associated industrialization and agricultural development. The specific causes of the atmospheric methane concentration increase are not well known, but may relate to either increases in methane sources, decreases in the strengths of the sinks, or both.

7394 (DOE/ER/61059–2) **Cloud and aerosol characterization for the ARM central facility: Multiple remote sensor techniques development: Final technical report.** Sassen, K. Utah Univ., Salt Lake City, UT (United States). Dept. of Meteorology. 1 Nov 1993. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-90ER61059. Order Number DE94003523. Source: OSTI; NTIS; GPO Dep.

In support of the initial phase of the Instrument Development Program (IDP) of the Atmospheric Radiation Measurement (ARM) program, the authors have researched the means by which multiple remote sensing techniques could be best applied to characterizing the cloudy atmosphere. This research has directly supported the short-term goal of aiding in the selection of the most appropriate instrumentation for ARM Clouds and Radiation Testbed (CART) sites, but also has more long-term consequences for the application of remote sensing for measuring cloud properties of crucial concern to general circulation and climate models. To accomplish the goals they have (1) developed a mobile, state-of-the-art, scanning polarization diversity lidar (PDL) to test a variety of techniques for cloud remote sensing, including simultaneous dual-wavelength and dual-polarization, and high-speed variable field-of-view operations; (2) successfully participated in field projects using the PDL along with other remote sensors and instrumented aircraft to obtain detailed datasets for the testing of instrument techniques; (3) in collaboration with researchers at the NOAA Wave Propagation Laboratory, used numerical cloud modeling and empirical studies to develop and refine remote sensing approaches for cloud property retrieval.

7395 (DOE/ER/61065–3) **Testbed model and data assimilation for ARM: Progress report No. 3, 1 September 1992–30 April 1993.** Louis, J.F. Atmospheric and Environmental Research, Inc., Cambridge, MA (United States). 28 Apr 1993. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-90ER61065. Order Number DE94000432. Source: OSTI; NTIS; GPO Dep.

The ultimate objectives of this research are to further develop ALFA (AER Local Forecast and Assimilation) model originally designed at AER for local weather prediction and apply it to several related purposes in connection with the Atmospheric Radiation Measurement (ARM) program: (a) to provide a testbed that simulates a global climate model in order to facilitate the development and testing of new cloud parametrizations and radiation models; (b) to assimilate the ARM data continuously at the scale of a climate model, using the adjoint method, thus providing the initial conditions and verification data for testing parametrizations; (c) to study the sensitivity of a radiation scheme to cloud parameters, again using the adjoint method, thus demonstrating the usefulness of the testbed model. The data assimilation uses a variational technique that minimizes the difference between the model results and the observation during the analysis period. The adjoint model is used to compute the gradient of a measure of the model errors with respect to nudging terms that are added to the equations to force the model output closer to the data.

7396 (DOE/ER/61365–T2) **An evaluation of the utility of ground-based high resolution interferometer (GB-HIS) soundings of the planetary boundary layer.** Ding, Hanjun. Wisconsin Univ., Madison, WI (United States). 1993. 84p. Sponsored by USDOE, Washington, DC (United States);National Aeronautics and Space Administration, Washington, DC (United States). DOE Contract FG02-92ER61365. Grant NAG-1-1177. Order Number DE94000960. Source: OSTI; NTIS; GPO Dep.

This thesis evaluates atmospheric soundings generated from the ground-based high resolution interferometer soundes (GB-HIS). The two goals are (1) to estimate the accuracy of GB-HIS temperature and dew point soundings using statistical analysis and comparison against observation from simultaneous radiosondes, and (2) to exploit the high temporal resolution of GB-HIS data set to analyze planetary boundary layer (PBL) thermodynamic properties. This thesis consists of five additional sections. Section 2 describes the methodology of GB-HIS retrieval as developed by Smith (1993). Section 3 provides a statistical error analysis of the GB-HIS system. Section 4 shows the utility of GB-HIS data in monitoring the PBL evolution, while Section 5 discusses and validates a simple mixed-layer growth model recently developed by Stull (1993). Finally, Section 6 offers conclusions and suggestions for further studies.

7397 (DOE/EV/03688–T3) **Consequence assessment for Airborne Releases of SO_2 from the Y-12 Pilot Dechlorination Facility.** Pendergrass, W.R. National Oceanic and Atmospheric

Administration, Oak Ridge, TN (United States). Air Resources Lab. Atmospheric Turbulence and Diffusion Div. Jun 1992. 30p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AI05-76EV03688. Order Number DE93017968. Source: OSTI; NTIS; INIS; GPO Dep.

The Atmospheric Turbulence and Diffusion Division was requested by the Department of Energy's Oak Ridge Operations Office to conduct a consequence assessment for potential atmospheric releases of SO_2 from the Y-12 Pilot Dechlorination Facility. The focus of the assessment was to identify "worst" case meteorology which posed the highest concentration exposure potential for both on-site as well as off-site populations. A series of plausible SO_2 release scenarios were provided by Y-12 for the consequence assessment. Each scenario was evaluated for predictions of downwind concentration, estimates of a five-minute time weighted average, and estimate of the dimension of the puff. The highest hazard potential was associated with Scenario 1, in which a total of eight SO_2 cylinders are released internally to the Pilot Facility and exhausted through the emergency venting system. A companion effort was also conducted to evaluate the potential for impact of releases of SO_2 from the Pilot Facility on the population of Oak Ridge. While specific transport trajectory data is not available for the Pilot Facility, extrapolations based on the Oak Ridge Site Survey and climatological records from the Y-12 meteorological program does not indicate the potential for impact on the city of Oak Ridge. Steering by the local topographical features severely limits the potential impact ares. Due to the lack of specific observational data, both tracer and meteorological, only inferences can be made concerning impact zones. It is recommended tat the Department of Energy Oak Ridge Operations examine the potential for off-site impact and develop the background data to prepare impact zones for releases of hazardous materials from the Y-12 facility.

7398 (DOE/FTR–93017643) **Travel to the Netherlands for the International Workshop on CO_2 and the Biosphere: Foreign trip report, November 13–22, 1991.** Dahlman, R.C. USDOE, Washington, DC (United States). [1991]. 9p. Sponsored by USDOE, Washington, DC (United States). Order Number DE93017643. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The purpose of this travel was to present a paper at the International Workshop on CO_2 and the Biosphere. The paper described DOE-supported research on CO_2 and plants, and the traveler participated in discussions of scientific findings and ideas for future research needs related to the direct effect of CO_2 on plants, crops and ecosystems. In addition, the traveler met with Prof Mark Stitt (Univ Heidelberg) to discuss approaches and opportunities for using molecular techniques in fundamental studies of plant response to CO_2 enrichment.

7399 (DOE/HWP–147) **Energy recovery ventilation as a radon mitigation method for Navy family housing in Guam.** USDOE Oak Ridge Operations Office, TN (United States); Oak Ridge National Lab., TN (United States). HAZWRAP Support Contractor Office. Dec 1993. 70p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE94005146. Source: OSTI; NTIS; INIS; GPO Dep.

Energy recovery ventilation involves the exchange of contaminated indoor air with fresh, uncontaminated outdoor air with recovery of energy. During radon mitigation diagnostics, air change measurements were performed within three typical Navy family houses, and some were found to be well below recommended minimum standards. The only practical way to solve the indoor air quality problem was to increase the ventilation rate. Options were evaluated, and it was decided to install energy recovery ventilation (ERV) systems. An ERV system is a packaged unit complete with blower fans, controls, and air-to-air heat exchanger. However, because of economical limits on the quantity of conditioned air that can be exchanged, ERV has a finite range of application in radon abatement. In Guam, ERV has potential applications in up to 370 units and in an additional 154 units if the mechanical systems are moved indoors. The performance of ERV systems were evaluated during a demonstration program to determine the removal efficiency of radon.

7400 (DOE/OR/00033–T554) **Interactions between a tropical mixed boundary layer and cumulus convection in a radiative-convective model.** Dean, C.L. (Pennsylvania State Univ., University Park, PA (United States)). Oak Ridge Inst. for Science and Education, TN (United States); Pennsylvania State Univ., University Park, PA (United States). May 1993. 142p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-76OR00033. Order Number DE94000848. Source: OSTI; NTIS; GPO Dep.

This report details a radiative-convective model, combining previously developed cumulus, stable cloud and radiation parameterizations with a boundary layer scheme, which was developed in the current study. The cloud model was modified to incorporate the effects of both small and large clouds. The boundary layer model was adapted from a mixed layer model was only slightly modified to couple it with the more sophisticated cloud model. The model was tested for a variety of imposed divergence profiles, which simulate the regions of the tropical ocean from approximately the intertropical Convergence Zone (ITCZ) to the subtropical high region. The sounding used to initialize the model for most of the runs is from the trade wind region of ATEX. For each experiment, the model was run with a timestep of 300 seconds for a period of 7 days.

7401 (DOE/RL/12092–T1) **Partial and preliminary inventory of NOAA data for ARM/IDASS research.** Martner, B.E. (comp.). National Oceanic and Atmospheric Administration, Boulder, CO (United States). Wave Propagation Lab. Jun 1991. 32p. Sponsored by USDOE, Washington, DC (United States);National Oceanic and Atmospheric Administration, Washington, DC (United States). DOE Contract AI06-91RL12092. Order Number DE94000567. Source: OSTI; NTIS; GPO Dep.

The first quarter of 1991 was an extremely active time for atmospheric measurements in the Denver area. Four field projects were conducted with overlapping schedules and area domains between mid-January and mid-April. The data collected may be of mutual interest to the participants of the various projects. Data inventory catalogs for each project will assist researchers by documenting the kinds of measurements, periods of observation, the data archival mediums, and the data availability. This report provides a partial and preliminary inventory of data obtained for the Department of Energy's Atmospheric Radiation Measurement (ARM) program Integrated Data Assimilation and Sounding System (IDASS) research. It includes only those measurements obtained by the National Oceanic and Atmospheric Administration's Wave Propagation Laboratory and Aeronomy Laboratory (NOAA/WPL and NOAA/AL). Many of these data are currently undergoing post-processing and inspection by each instrument's operating group to improve and insure data quality. Therefore, the information in this report is preliminary.

7402 (ECN-RX–93-107) **Reduction of solar radiation by manmade aerosol.** Ten Brink, H.M. Netherlands Energy Research Foundation (ECN), Petten (Netherlands). Oct 1993. 12p. Order Number DE94729808. Source: OSTI; NTIS; Available from the library of the Netherlands Energy Research Foundation (ECN), P.O. Box 1, 1755 ZG Petten (Netherlands).

Article intended for the proceedings of the European Conference on Climate Change, Copenhagen, Denmark, 6-10 Sep 1993.

The amount of solar radiation reaching the earth is reduced by reflection of the light on (manmade) aerosol particles. This effect presents the major uncertainty in quantifying climate change by the increase in greenhouse gas emissions. The dominant reason for the uncertainty is the localized character of aerosol. It is the aim of the present study to quantify the effect of anthropogenic aerosol on the local climate in Europe. This is realized along three interconnected approaches. First, empirical factors stemming from measurements in the US and used in the present estimates of the reflection of solar radiation by anthropogenic aerosol are checked for their validity in the European domain. Secondly, historical data on solar flux in Europe are related to the historic trend in aerosol loading. Finally, a sophisticated aerosol and cloud (radiation) module is developed for incorporation in a climate model. The radiation module uses aerosol characteristics as measured in the field and is validated via solar radiation measurements. Since the study recently started only preliminary results are reported. 1 fig., 13 refs.

7403 (ENEA-RT-AMB–91-18) **Atmospheric radiative transfer: LOWTRAN 7 calculation code.** Cagnetti, V. (ENEA,

Casaccia (Italy). Area Energia Ambiente e Salute); Corticelli, M.A.; Santucci, R. No corporate text available. Jan 1993. 56p. (In Italian). (RT/AMB–91-18). Order Number DE94727313. Source: OSTI; NTIS (US Sales Only).

The main problem of correcting telemetered data from the effect due to the absorption and consequent riemission of energy, in the observed wavelength, by the atmosphere, can be solved with different strategies. The Lowtran code, developed by NOOA is based on a mathematical model for the simulation of the iteration between photons and atmosphere; this code has been adapted to the 3. 20 version of FORTRAN Microsoft for PC IBM/DOS compatible. The code is fully explained and commented.

7404 (ENEA-RT-AMB–92-11) **Wind field modelling: Mass consistent model and simulation of atmospheric dispersion of passive pollutants over complex terrain and heterogeneous surfaces.** Busuoli, M. (ENEA, Bologna (Italy)); Zanini, G. No corporate text available. Apr 1993. 103p. (In Italian). (RT/AMB–92-11). Order Number DE94727312. Source: OSTI; NTIS (US Sales Only).

Numerical modeling techniques are applied to study the atmospheric dispersion of passive pollutant over complex terrain. A code uses the winds provided by a diagnostic wind model utilizing terrain following coordinates, to advect and diffuse the effluent. The numerical simulations refer to the tracer release (SF_6) experiments carried out in the lake Brasimone area (Appennine mountains between Bologna and Florence) during June 1985.

7405 (ETDE-IT–93-249) **Urban area PBL study by means of Doppler sodar and cryogenic radiometer: Present status of research.** Abbate, G. (Rome Univ. (Italy). Dipt. di Fisica); Calisse, P.; Fiocco, G.; Rao, M.P.; Berteotti, C. No corporate text available. 1992. 11p. (CONF-9206419–1: Geophysics and environment: Basic pollution, Rome (Italy), 16-18 Jun 1992). Order Number DE94727351. Source: OSTI; NTIS (US Sales Only).

With the aim of contributing to a deeper knowledge of the interrelation between radiative and dynamic energy exchanges in the planetary boundary layer (PBL) of an urban environment, two measurement campaigns were carried out in Rome, 12-18 Sept. 1990 and 16-22 Sept. 1991, using a tri-axial Doppler sodar operating in the monostatic mode and a cryogenic radiometer operating at about 850 micro m wavelength. The two instruments were operated simultaneously, the sodar for wind field characterization and the cryogenic radiometer for measurements of the associated radiation field and atmospheric temperature fluctuations. Depending upon the meteorological conditions, the two sets of data were found to exhibit fairly high values of correlation. Cross-correlograms are presented here between vertical velocity (averaged along 300 m in height) and radiometric data, for typical PBL conditions, together with scatterplots clearly showing the relation between the two data sets. Kinematic eddy sensible heat fluxes computed by using radiometric temperature rather than ground temperature values were found to be lower, as expected.

7406 (EUR–14411, pp. 69-150) **Properties and behaviour of radon and thoron and their decay products in the air.** Porstendoerfer, J. (Goettingen Univ. (Germany). Isotopenlaboratorium fuer Biologische und Medizinische Forschung). Commission of the European Communities, Luxembourg (Luxembourg). 1993. In *Fifth International Symposium on the natural radiation environment.* 282p. Order Number DE94608870. Source: OSTI; NTIS (US Sales Only); INIS.

In a first chapter, this paper describes radon and thoron decay chains and their decay products. In a second chapter, the main radioactive decay properties, the quantities and the units are listed, which are used in radiation protection in relation with the radon / thoron daughters in air and in the inhalation exposure of individuals. The main processes influencing the concentration and activity aerosol size distribution of the radon and thoron daughters are summarized in chapter 3. In the fourth chapter, radon, thoron, and their decay products in the human environment are characterized. Data of activity concentration and activity aerosol size distribution measurements obtained under realistic conditions in different dwellings and in the open atmosphere are reported. In chapter 5, the implications of the experimental data for dose factors and estimates the average dose of the population by radon, thoron, and their decay products. 149 refs., 17 tabs., 22 figs.

7407 (IKE–2-99) **Modeling of the deposition processes during dew formation in complex structures: Contribution to EUROTRAC subproject BIATEX. Final report.** Bieder, U.; Schatz, A. Stuttgart Univ. (Germany). Inst. fuer Kernenergetik und Energiesysteme. Jan 1993. 130p. (In German). Sponsored by Bundesministerium fuer Forschung und Technologie, Bonn (Germany). Foerderkennzeichen BMFT 07EU752. Order Number DE94734010. Source: OSTI; NTIS (US Sales Only).

Measurements and simple theoretical estimates have shown, that wet vegetation can be a more effective sink for air pollutants than dry vegetation. This is valid especially for water soluble compounds and for compounds which are very reactive in the liquid phase. Nevertheless, a quantification of the enhanced air pollutant deposition to wet vegetation has not been carried out. In this study, the enhanced trace gas deposition to wet vegetation is investigated on the example of low and homogeneous vegetation wetted by dew. Therefore a one dimensional Three-Layer-Resistance-Model was developed and tested against measurements. The simulation calculation shows a strong dependency of the SO_2 deposition on the availability of neutralizing compounds near the ground, especially of NH_3. Highly water soluble gases, as H_2O_2, dissolve almost totally in dew, so their deposition rate to wet vegetation can be up to 80% higher than to dry vegetation. The deposition rate of moderate soluble gases, which are reactive in the liquid phase, such as SO_2, can enhance in the presence of dew up to 50%. Even for insoluble gases, which are reactive in the liquid phase, as O_3, the deposition rate to wet vegetation can enhance up to 20% compared to the deposition to dry vegetation. (orig.). 83 refs., 23 tabs., 42 figs.

7408 (IVL-B–1106) **Ammonia emissions from two fertilized wheat fields.** Ferm, M. Swedish Environmental Research Inst., Goeteborg (Sweden). Jul 1993. 12p. Order Number DE94730415. Source: OSTI; NTIS.

The NH_3 emissions from two winter wheat fields have been measured with a new variant of the gradient technique. Wind speed weighted, weekly average NH_3 concentrations and the average wind speed were determined using passive samplers. One of the fields received an optimum amount of nitrogen fertilization and the second field 60% of the optimum. The measurements started on June 11th and ended on the day of harvesting (Aug 3rd, 1992). The measurements clearly show that the NH_3 emissions equal the NH_3 deposition from the atmosphere, and that the two fluxes are very small and negligible compared to the nitrogen content of the crop. An explanation to this may be that the summer was unusually warm and dry. No loss of nitrogen could be detected from the weekly crop analyses. 6 refs, 8 figs, 2 tabs

7409 (LA-UR–93-4000) **Development of methods for evaluating options for improving air quality in Santiago, Chile and its environs: Final report.** Williams, M.D.; Brown, M.J. Los Alamos National Lab., NM (United States). Oct 1993. 36p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE94003955. Source: OSTI; NTIS; GPO Dep.

Santiago, Chile has a serious air pollution problem. Aerosols reach very high levels and ozone exceeds US ambient standards on over 100 days a year. Chileans are very concerned about the poor air quality of Santiago and the effect of emissions from their copper smelters both near Santiago and at other sites. Officials from both the Santiago metropolitan air quality commission (La Comision Especial de Descontaminacion de le Region Metropolitana) and a government owned copper development company (La Empress Nacional de Mineria (ENAMI)) have asked for assistance to deal with the air quality problems in the city and associated with smelter emissions. This report describes the first steps in that effort. Santiago lies in a valley between a small coastal range to the west and the towering Andes to the cast. Air motion is greatly affected by the major topographical features which include the Pacific Ocean, the coastal range, and the Andes. In this first year of work the authors concentrated on gathering information on the meteorology, topography, and air quality of the metropolitan region. They examined two smelter sites and applied models to them to help their understanding and to provide assistance to ENAMI. One smelter, Ventanas, was located on the Pacific coast to the northwest of Santiago, while the other, Paipote, was located several

hundred kilometers to the north. The Ventanas emissions may potentially affect Santiago air quality. Several advantages of working with the smelters in the first phase of the project are: (1) there is more monitoring in the vicinity of the smelters, (2) the development of a useful emission inventory is easier, (3) they pose a simpler problem of immediate interest whose resolution will provide an early benefit to the Chilean colleagues, and (4) the authors gain important experience as they prepare to delve deeper into Santiago's air pollution problems.

7410 (LA-UR–93-4224) **Global atmospheric and ocean modeling on the connection machine.** Atlas, S.R. (Thinking Machines Corp., Cambridge, MA (United States)). Los Alamos National Lab., NM (United States). [1993]. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9306285–1: North Atlantic Treaty Organization/Advanced Study Institute (NATO/ASI) workshop in high performance computing in geosciences, Chamouix (France), 21-25 Jun 1993). Order Number DE94003930. Source: OSTI; NTIS; INIS; GPO Dep.

This paper describes the high-level architecture of two parallel global climate models: an atmospheric model based on the Geophysical Fluid Dynamics Laboratory (GFDL) SKYHI model, and an ocean model descended from the Bryan-Cox-Semtner ocean general circulation model. These parallel models are being developed as part of a long-term research collaboration between Los Alamos National Laboratory (LANL) and the GFDL. The goal of this collaboration is to develop parallel global climate models which are modular in structure, portable across a wide variety of machine architectures and programming paradigms, and provide an appropriate starting point for a fully coupled model. Several design considerations have emerged as central to achieving these goals. These include the expression of the models in terms of mathematical primitives such as stencil operators, to facilitate performance optimization on different computational platforms; the isolation of communication from computation to allow flexible implementation of a single code under message-passing or data parallel programming paradigms; and judicious memory management to achieve modularity without memory explosion costs.

7411 (LRAP–133) **A differential optical absorption spectroscopy (DOAS) system for urban atmospheric pollution monitoring.** Edner, H.; Ragnarson, P.; Spaennare, S.; Svanberg, S. Lund Univ. (Sweden). Dept. of Physics. [1993]. 12p. Order Number DE94730427. Source: OSTI; NTIS.

We describe a fully computer-controlled differential optical absorption spectroscopy (DOAS) system for atmospheric air pollution monitoring. A receiving optical telescope can sequentially tune in to light beams from a number of distant high-pressure xenon lamp light sources to cover the area of a medium-sized city. A beam-finding servo system and automatic gain control allow unattended long-time monitoring. Using an astronomical code, celestial sources can also be searched and tracked. Selected wave-length regions are rapidly and repetitively swept by a monochromator to sensitively record the atmospheric absorption spectrum while avoiding the detrimental effects of atmospheric turbulence. By computer fitting to stored laboratory spectra the path-averaged concentration of a number of important pollutants such as NO_2, SO_2 and O_3 can be evaluated. 22 refs, 9 figs

7412 (NEI-DK–1387) **Substitution of CFC in release agents.** Arbejdsrapport fra Miljoestyrelsen, 54, Arbejdsrapport fra Miljoestyrelsen, 54. Olsen, I. (Direktoratet for Arbejdstilsynet (Denmark)); Olsen, E.; Overgaard Pedersen, J. Miljoestyrelsen, Copenhagen (Denmark). 1993. 102p. (In Danish). Order Number DE94730329. Source: OSTI; NTIS.

A working party, ultimately under the Danish Ministry of the Environment, has investigated the substitution of chlorofluorocarbons (CFC) in slip agents in connection with gasoline mixtures, refrigerators etc. and the aims and results of this investigation are here presented in detail. The feasibility of microemulsions, where water and carbon dioxide as extinguishing agents are built into pure organic solvent blends intended for slip agents, were examined as these are not inflammable. Flash-point determinations were carried out. Addition of 1,1-dichloro-1-fluoro ethane to the microemulsions was advantageous. The CFC materials used previously can be substituted with solvents but these have slower drying rates and have a flash point of over 55 degrees centigrade. Carbon dioxide can be sprayed under high pressure, allowing a reduction of solvent normally used and eliminating fire risk, but this is not economically feasible. It is claimed that the consumption of CFC used to produce slip agents has been reduced to zero since April 1993, due to statutory order and the work described in the report. (AB) (31 refs.)

7413 (NEI-DK–1391) **Indoor climate in buildings located on polluted ground: Measurement results and countermeasures.** Cowiconsult Raadgivende Ingenioerer A/S, Lyngby (Denmark). Apr 1992. 110p. (In Danish). Order Number DE94730327. Source: OSTI; NTIS.

Prepared for Bygge- og Boligstyrelsen.

In the case of buildings located on land polluted by rubbish dumps, industrial wastes, gasworks etc., it can be necessary to evaluate whether the indoor climate is influenced in such a way that it can constitute a health hazard to the occupants. A summary is presented of previous measurements carried out on indoor climates in 24 cases of buildings standing on polluted grounds. In addition, a description is given of a number of countermeasures that have been applied. (AB)

7414 (NEI-SE–128) **Volatile hazardous hydrocarbons in road tunnels, cars and smoky rooms.** Barrefors, G. Chalmers Univ. of Technology, Gothenburg (Sweden). Dept. of Chemical Environmental Science. 1993. 20p. Order Number DE94730407. Source: OSTI; NTIS; Available from: Chalmers Univ. of Technology, Dept. of Chemical Environmental Science, S-412 96 Gothenburg, Sweden.

Hazardous volatile hydrocarbons were determined in selected urban environments where many people are exposed to high concentration levels. Quantitative proportions of C_2-C_8 alkenes, alkadienes, alkynes, alkanes and arenes were determined for air polluted by vehicle exhaust or tobacco smoke. Samples were taken on adsorbent cartridges and analyzed by gas chromatography after thermal desorption and cryofocusing. The concentrations of total non-methane hydrocarbons in the Tingstad Tunnel in Gothenburg were found to be 800-4000 $\mu g/m^3$. These concentration levels are several times higher than those in a car in urban traffic. The high concentrations of benzene, ethene, and 1.3-butadiene, representing particular health hazards, are disquieting with regard to the present knowledge of the toxicity of these hydrocarbons. Current plans for new long road tunnels may be questioned with regard to the resulting increased exposure of motorist and passengers to air pollutants. Many volatile hydrocarbons found in environmental tobacco smoke are also present in vehicle exhaust in similar proportions. Urban air polluted by petrol-fuelled vehicles differs mainly by much lower proportions of isoprene and much higher proportions of petrol alkanes and alkylbenzenes. The total concentration of C_2-C_8 hydrocarbons was found to be similar in a smoky room and inside a car in urban traffic. 28 refs, 1 fig, 1 tab

7415 (NEI-SE–129) **Determination of volatile hydrocarbons in air.** Loefgren, L. Chalmers Univ. of Technology, Gothenburg (Sweden). Dept. of Chemical Environmental Science. 1990. 9p. (In Swedish). Order Number DE94730408. Source: OSTI; NTIS: Available from: Chalmers Univ. of Technology, Dept. of Chemical Environmental Science, S-412 96 Gothenburg, Sweden.

Environmentally important hydrocarbons in air were determined by sampling on selected adsorbents followed by thermal desorption and gas chromatography on suitable columns in the laboratory. The carcinogenic 1.3-butadiene and the four isomeric butenes were determined in the complex hydrocarbon mixture of petrol exhaust and petrol vapour in urban air. The concentration of butadiene, reflecting outdoor urban exposure, was in the range of 0.5-5 $\mu g/m^3$. Exposure levels of a suburban motorist was assessed for more than twenty volatile aromatic hydrocarbons from traffic exhaust. The levels were found to be 5-10 times higher than those of a train commuter. Comparisons in Switzerland and Sweden with differential optical absorption spectroscopy (DOAS) demonstrated this recently developed technique to be useful for continuous monitoring of benzene and toluene (above 10 $\mu g/m^3$) in moderately to heavily polluted urban air. The diffuse hydrocarbon emissions from the process area of a bitumen refinery were determined from vertical and horizontal concentration profiles across the emission

plume. The sum of the C_8-C_9 hydrocarbons made up 40% and the aromatic hydrocarbons made up 20% of the plume.

7416 (NEI-SE–130) **Terpenes emitted to air from forestry and the forest industry.** Stroemvall, A.M. Chalmers Univ. of Technology, Gothenburg (Sweden). Dept. of Chemical Environmental Science. 1992. 25p. Order Number DE94730409. Source: OSTI; NTIS; Available from: Chalmers Univ. of Technology, Dept. of Chemical Environmental Science, S-412 96 Gothenburg, Sweden.

The work reported in this thesis focuses on the poorly studied anthropogenic terpene emission from the industrial use of softwood. The advanced analytical determinations were made by adsorption sampling followed by thermal desorption and gas chromatography in the laboratory. Monoterpenes from forestry were analyzed for Scots pine (Pinus sylvestris) and Norway spruce (Picea abies). Near to a harvester, the total monoterpene concentrations reached $\approx$ 1000 $\mu g/m^3$, whereas the background level was $\approx$ 1 $\mu g/m^3$. Prominent monoterpenes were α-pinene, β-pinene, 3-carene, camphene, limonene, β-phellandrene, myrcene and terpinolene. Local formation of phytotoxic photooxidants may occur because of the short lifetimes of terpenes in air. Terpenes in process emissions and plumes from kraft pulp industries were found to have a uniform composition similar to that of pulpwood and of recovered sulphate turpentine. Predominant monoterpenes were α-pinene and 3-carene from Scots pine. The emitted terpenes give rise to photooxidants and to oxidation of co-emitted sulphur and nitrogen oxides. The monoterpenes in emissions from industries producing stone groundwood and thermomechanical pulp were similar in composition to that of the processed pulpwood from Norway spruce. The process emissions from a sulphite mill consisted mainly of p-cymene, formed from spruce monoterpenes by acid rearrangements. The terpene emissions from the barking of timber and pulpwood differed somewhat in composition from that of the wood. Oxidative decomposition and acid rearrangements of monoterpenes in the sampling cartridges were studied as major analytical difficulties. Pretreatment with thio sulphate and hydrogen carbonate prevented unwanted reactions of the terpenes. 62 refs

7417 (NILU-OR–27/93) **Monitoring of the ozone layer: A Norwegian and global perspective.** Stordal, F.; Braathen, G.O.; Dahlback, A. Norsk Inst. for Luftforskning, Lillestroem (Norway). Jul 1993. 11p. (In Norwegian). Order Number DE94730351. Source: OSTI; NTIS.

The observed reduction of stratospheric ozone is described. The focus is on global changes and changes over Europe and Norway. The development of the atmospheric contents of chlorine and bromine compounds, which deplete the ozone layer, is discussed. 10 refs., 5 figs., 2 tabs.

7418 (NUTEK–89-1791) **Exhaust gas emissions from sea transportation.** Alexandersson, A. (MariTerm AB, Gothenburg (Sweden)); Flodstroem, E.; Oeberg, R.; Staalberg, P. Swedish National Board for Industrial and Technical Development (NUTEK), Stockholm (Sweden); Swedish Transport Research Board, Stockholm (Sweden). May 1991. 359p. (In Swedish). (TFB–91-18). Order Number DE94730443. Source: OSTI; NTIS.

The aim of the project has been to clarify the exhaust gas emissions of sea transportation, as regards quantity as well as type, and to relate this to the total emissions over Sweden. Different purification techniques have been studied and examples of ship-adapted exhaust purification have been worked out and presented. 77 refs, 60 figs, 45 tabs

7419 (PNL-SA–22351) **An overview of the ASCOT program.** Doran, J.C. Pacific Northwest Lab., Richland, WA (United States). Sep 1993. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-930810–13: Topical meeting on environmental transport and dosimetry, Charleston, SC (United States), 31 Aug - 3 sep 1993). Order Number DE94004356. Source: OSTI; NTIS; INIS; GPO Dep.

ASCOT (Atmospheric Studies in Complex Terrain) is a multilaboratory U.S. Department of Energy research program studying the properties of atmospheric boundary layers over non-uniform terrain and the interactions among various scales of motion that influence those properties. Within this context, one of the principal goals of the ASCOT program is to provide information necessary for an accurate description of transport and diffusion processes for atmosphere pollutants that may be released in regions of complex terrain. Three examples from past ASCOT research relevant to this goal are presented. Current and proposed research in the Front Range region of Colorado in the vicinity of the Rocky Flats Plant is also described.

7420 (SAND–93-2599C) **Trace organic chemical detection using an ultraviolet excitation molecular beam fluorometer.** Preppernau, B.L.; Hargis, P.J. Sandia National Labs., Albuquerque, NM (United States). [1993]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-940341–1: 4. laser applications to chemical analysis meeting, Jackson Hole, WY (United States), 8-11 Mar 1994). Order Number DE94002649. Source: OSTI; NTIS; GPO Dep.

Detection of air-borne environmental contaminants, such as organic solvents, requires unambiguous compound identification and sensitivity to concentrations below those permitted by regulating agencies. One promising detection approach uses a pulsed supersonic molecular beam vacuum expansion in combination with fluorescence signal spectral analysis to identify species in a chemical mixture. This report describes the use and performance of the ultraviolet excitation molecular beam fluorometer.

7421 (UCID–21336-Rev.1) **CHAWS user's guide: System description and standard operating procedures, Lexington-Blue Grass Army Depot.** Martins, S.A.; Shinn, J.H. (eds.). Lawrence Livermore National Lab., CA (United States). May 1993. 130p. Sponsored by Department of Defense, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE94003668. Source: OSTI; NTIS; GPO Dep.

The Chemical Hazard Warning System (CHAWS) is designed to collect meteorological data and to display, in real time, the dispersion of hazardous chemicals that may result from an accidental release. Meteorological sensors have been placed strategically around the Lexington-Blue Grass Army Depot and are used to calculate direction and hazard distance for the release. Based on these data, arrows depicting the release direction and distance traveled are graphically displayed on a computer screen showing a site map of the facility. The objectives of CHAWS are as follows: To determine the trajectory of the center of mass of released material from the measured wind field; to calculate the dispersion of the released material based on the measured lateral turbulence intensity (sigma theta); to determine the height of the mixing zone by measurement of the inversion height and wind profiles up to an altitude of about 1 km at sites that have SODAR units installed; to archive meteorological data for potential use in climatological descriptions for emergency planning; to archive air-quality data for preparation of compliance reports; and to provide access to the data for near real time hazard analysis purposes. CHAWS sites are located at the Pine Bluff Arsenal, Arkansas, Edgewood area of Aberdeen Proving Ground, Maryland, Tooele Depot, Utah, Lexington-Blue Grass Depot, Kentucky, and Johnston Island in the Pacific. The systems vary between sites with different features and various types of hardware. The basic system, however, is the same. Nonetheless, we have tailored the manuals to the equipment found at each site.

7422 (UCRL-ID–112129-Rev.1) **The AFTAC model integration project: An annual progress report: Revision 1.** Rodriguez, D.J.; Moore, R.M. Lawrence Livermore National Lab., CA (United States). Dec 1993. 41p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE94005649. Source: OSTI; NTIS; GPO Dep.

The EXPRESS and ADPIC models have been designed to assist emergency personnel in their response to radiological accidents. Closure on the development of an operational version of the HADPIC Modeling System (HMS), a multi-faceted application that supports the hemispheric ADPIC (HADPIC) atmospheric dispersion model on a Sun workstation, was achieved toward the end of the fiscal year. The fulfilling tasks over the period encompassed by this report included: (1) the generation of software for calculating average concentrations at arbitrary locations in the model domain and displaying isopleths of concentration and (2) the comprehensive testing of major components of the HMS using IEEE standards.

Scientists for Lawrence Livermore National Laboratory and the Institute of Experimental Meteorology in Obninsk, Russia, extensively evaluated their respective models (ADPIC/U.S. and EXPRESS/Russia) using perfluorocarbon tracer data from the Across North America Tracer Experiment (ANATEX). The results of both models are reported here because of the useful insights they provide regarding limits of performance as a function of model sophistication and the quality of the input meteorology.

7423 (UCRL-JC–115045) **The technical basis for air pathway assessment of resuspended radioactive aerosols: LLNL experiences at seven sites around the world.** Shinn, J.H. Lawrence Livermore National Lab., CA (United States). Sep 1993. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-930914–1: The technical basis for measuring, modeling and mitigating toxic aerosols, Albuquerque, NM (United States), 26-30 Sep 1993). Order Number DE94003626. Source: OSTI; NTIS; GPO Dep.

There is a large uncertainty in quantifying the inhalation pathway and the aerosol emission rate in human health assessments of radioactive-contamination sites. The need for site-specific assessments led to formation of our team of specialists at LLNL, who have participated in numerous field campaigns around the world. Our goal was to obtain all the information necessary for determining potential human exposures and to estimate source terms for turbulent transport of the emissions during both normal and disturbed soil conditions. That is, measurements were made of the key variables to quantify the suspended aerosols at the actual contamination sites, but different scenarios for habitation, site management, and site cleanup were included. The most notable locations of these site-investigations were the Marshall Islands (Bikini, Enewetak, and Rongelap), Nevada Test Site (GMX, Little Feller, Palanquin, and Plutonium Valley), Tonopah (Nevada–site of Roller Coaster), Savannah River Lab (South Carolina–H-Area site), Johnston Island (cleanup of rocket-impact site), Chernobyl (Ukraine–grass field end sandy beach sites near Nuclear Power Plant Unit 4), and Palomares (Spain–site of aircraft accident). This discussion will review the variables quantified, methods developed, general results, uncertainty of estimations, and recommendations for future research that are a result of our experience in these field studies.

7424 (UCRL-JC–115085) **Evaluation of the Atmospheric Release Advisory Capability emergency response model for explosive sources.** Baskett, R.L.; Freis, R.P.; Nasstrom, J.S. Lawrence Livermore National Lab., CA (United States). 7 Oct 1993. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48 ; AC08-93NV11265. (CONF-931117–1: 20. international technical meeting on air pollution modelling and its application, Valencia (Spain), 29 Nov - 3 dec 1993). Order Number DE94002986. Source: OSTI; NTIS; GPO Dep.

The Atmospheric Release Advisory Capability (ARAC) at the Lawrence Livermore National Laboratory (LLNL) uses a modeling system to calculate the impact of accidental radiological or toxic releases to the atmosphere anywhere in the world. Operated for the US Departments of Energy and Defense, ARAC has responded to over 60 incidents in the past 18 years, and conducts over 100 exercises each year. Explosions are one of the most common mechanisms by which toxic particulates are injected into the atmosphere during accidents. Automated algorithms with default assumptions have been developed to estimate the source geometry and the amount of toxic material aerosolized. The paper examines the sensitivity of ARAC's dispersion model to the range of input values for explosive sources, and analyzes the model's accuracy using two field measurement programs.

7425 (UCRL-LR–115188) **Radiological analysis of the National Ignition Facility.** Singh, M.S. Lawrence Livermore National Lab., CA (United States). 26 Oct 1993. 42p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE94004272. Source: OSTI; NTIS; INIS; GPO Dep.

The National Ignition Facility (NIF) will be capable of providing a laser output pulse at 0.35 μm wavelength with an energy of 1.8 MJ and a power of 500 TW. The NIF will house a multi-beamline, Nd-doped-glass laser capable of delivering such pulses into a target chamber. In the target chamber, a positioner will center a target containing fusion fuel (a deuterium-tritium mixture) for each ignition shot. Diagnostics in the chamber will provide the test data (e.g., neutron and x-ray yields). The NIF baseline case would result in deuterium-tritium (DT) neutron yields of about 10^{16} to 10^{19} per fusion shot. The baseline fusion shots would use 2 Ci of tritium per capsule, with an annual input of about 600 Ci (60 mg). The resulting anticipated annual airborne emissions would consist of approximately 10 Ci of tritium and small amounts of activated air species. The NEF shielding configuration would limit the direct and skyshine radiation intensities around the facility to less than 0.1 rem/y on site and to less than 0.001 rem/y off site. This report presents the results of atmospheric transport calculations for tritium and activated air emissions; neutron and secondary gamma-ray shielding calculations; and results of benchmark studies for validating the EPA CAP88-PC code (for the transport of tritium) and the Lawrence Livermore National Laboratory neutron-photon transport code TART. All calculations were normalized to the annual baseline case of 1.4×10^{20} DT-fusion neutrons. Tritium emissions were normalized to 10 Ci/y. Radiological analyses show that normal NIF operations would result in off-site radiation intensities that would represent insignificant increases over the natural background radiation intensity. The NIF is a national facility, and the DOE has not completed the site evaluation process. Although the results presented in this report are for LLNL, the analytical approach is applicable to any site.

7426 (WHC-SD-W026-TA–001) **Technical Assessment: WRAP 1 HVAC Passive Shutdown.** Ball, D.E.; Nash, C.R.; Stroup, J.L. Westinghouse Hanford Co., Richland, WA (United States). 12 Aug 1993. 76p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. Order Number DE94003529. Source: OSTI; NTIS; INIS; GPO Dep.

As the result of careful interpretation of DOE Order 6430.IA and other DOE Orders, the HVAC system for WRAP 1 has been greatly simplified. The HVAC system is now designed to safely shut down to Passive State if power fails for any reason. The fans cease functioning, allowing the Zone 1 and Zone 2 HVAC Confinement Systems to breathe with respect to atmospheric pressure changes. Simplifying the HVAC system avoided overdesign. Construction costs were reduced by eliminating unnecessary equipment. This report summarizes work that was done to define the criteria, physical concepts, and operational experiences that lead to the passive shutdown design for WRAP 1 confinement HVAC systems.

7427 (ANL/EA/CP–79950) **Estimating baseline risks from biouptake and food ingestion at a contaminated site.** MacDonell, M.; Woytowich, K.; Blunt, D.; Picel, M. Argonne National Lab., IL (United States). [1993]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-931095–65: Department of Energy environmental remediation conference, Augusta, GA (United States), 24-28 Oct 1993). Order Number DE94003218. Source: OSTI; NTIS; INIS; GPO Dep.

Biouptake of contaminants and subsequent human exposure via food ingestion represents a public concern at many contaminated sites. Site-specific measurements from plant and animal studies are usually quite limited, so this exposure pathway is often modeled to assess the potential for adverse health effects. A modeling tool was applied to evaluate baseline risks at a contaminated site in Missouri, and the results were used to confirm that ingestion of fish and game animals from the site area do not pose a human health threat. Results were also used to support the development of cleanup criteria for site soil.

7428 (ANL/EAD/TM–2) **Adaptive sampling strategy support for the unlined chromic acid pit, chemical waste landfill,**

Sandia National Laboratories, Albuquerque, New Mexico. Johnson, R.L. Argonne National Lab., IL (United States). Nov 1993. 24p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE94004538. Source: OSTI; NTIS; GPO Dep.

Adaptive sampling programs offer substantial savings in time and money when assessing hazardous waste sites. Key to some of these savings is the ability to adapt a sampling program to the real-time data generated by an adaptive sampling program. This paper presents a two-prong approach to supporting adaptive sampling programs: a specialized object-oriented database/geographical information system (SitePlanner™) for data fusion, management, and display and combined Bayesian/geostatistical methods (PLUME) for contamination-extent estimation and sample location selection. This approach is applied in a retrospective study of a subsurface chromium plume at Sandia National Laboratories' chemical waste landfill. Retrospective analyses suggest the potential for characterization cost savings on the order of 60% through a reduction in the number of sampling programs, total number of soil boreholes, and number of samples analyzed from each borehole.

7429 (BNL–49709) **In-situ containment and stabilization of buried waste: Annual report FY 1993.** Allan, M.L.; Kukacka, L.E. Brookhaven National Lab., Upton, NY (United States). Oct 1993. 94p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. Order Number DE94005145. Source: OSTI; NTIS; INIS; GPO Dep.

In FY 1993 research continued on development and testing of grout materials for in-situ containment and stabilization of buried waste. Specifically, the work was aimed at remediation of the Chemical Waste Landfill (CWL) at Sandia National Laboratories (SNL) in Albuquerque, New Mexico as part of the Mixed Waste Landfill Integrated Demonstration (MWLID). The work on grouting materials was initiated in FY 1992 and the accomplishments for that year are documented in the previous annual report (Allan, Kukacka and Heiser, 1992). The remediation plan involves stabilization of the chromium plume, placement of impermeable vertical and horizontal barriers to isolate the landfill and installation of a surface cap. The required depth of subsurface barriers is approximately 33 m (100 ft). The work concentrated on optimization of grout formulations for use as grout and soil cement barriers and caps. The durability of such materials was investigated, in addition to shrinkage cracking resistance, compressive and flexural strength and permeability. The potential for using fibers in grouts to control cracking was studied. Small scale field trials were conducted to test the practicality of using the identified formulations and to measure the long term performance. Large scale trials were conducted at Sandia as part of the Subsurface Barrier Emplacement Technology Program. Since it was already determined in FY 1992 that cementitious grouts could effectively stabilize the chromium plume at the CWL after pre-treatment is performed, the majority of the work was devoted to the containment aspect.

7430 (CONF-9307141–1) **Direct Sampling Ion Trap Mass Spectrometry.** Thompson, C.V.; Wise, M.B.; Buchanan, M.V.; Guerin, M.R. Oak Ridge National Lab., TN (United States). [1993]. 17p. Sponsored by USDOE, Washington, DC (United States);Department of Defense, Washington, DC (United States). DOE Contract AC05-84OR21400. From Mobile Analytical Laboratory workshop; Los Alamos, NM (United States); 20-21 Jul 1993. Order Number DE93040606. Source: OSTI; NTIS; GPO Dep.

This presentation describes the development and field testing of Direct Sampling Ion Trap Mass Spectrometry (DSITMS) for the rapid analysis of volatile organics in air, water, and soil, with an emphasis on the fieldable version of the instrumentation. Direct Sampling Ion Trap Mass Spectrometry (DSITMS) has been developed in our laboratory to provide faster and less costly methods for the screening and analysis of environmental samples. "Direct sampling" involves the introduction of analytes directly into the mass spectrometer with no sample preconcentration and little or no sample preparation. Analytes can be monitored in real-time or near real-time at low part-per-billion (ppb) levels with analysis times ranging from instantaneous to approximately 3 minutes, depending on the sample matrix, the degree of specificity, and the level of quantification required. Particular attention has been given to developing instrumentation which is suitable to field applications. This includes applicability in mobile laboratories and stand-alone vehicle transportation. This paper summarizes the characteristics of DSITMS and describes currently developed instrumentation.

7431 (DOE/EA–0860) **Construction of a Solid State Research Facility, Building 3150: Environmental Assessment.** Oak Ridge National Lab., TN (United States). Jul 1993. 15p. Sponsored by USDOE, Washington, DC (United States). Order Number DE94001262. Source: OSTI; NTIS; INIS; GPO Dep.

The Department of Energy (DOE) proposes to construct a new facility to house the Materials Synthesis Group (MSG) and the Semiconductor Physics Group (SPG) of the Solid State Division, Oak Ridge National Laboratory (ORNL). The location of the proposed action is Roane County, Tennessee. MSG is involved in the study of crystal growth and the preparation and characterization of advanced materials, such as high-temperature superconductors, while SPG is involved in semiconductor physics research. All MSG and a major pardon of SPG research activities are now conducted in Building 2000, a deteriorating structure constructed in the 1940. The physical deterioration of the roof; the heating, ventilation, and air conditioning (HVAC) system; and the plumbing make this building inadequate for supporting research activities. The proposed project is needed to provide laboratory and office space for MSG and SPG and to ensure that research activities can continue without interruption due to deficiencies in the building and its associated utility systems.

7432 (DOE/ER/60581–6) **Effects of vegetation of radon transport processes in soil: The origins and pathways of ^{222}Rn entering into basement structures: Final report, March 15, 1987–May 15, 1993.** Borak, T.B. Colorado State Univ., Fort Collins, CO (United States). Aug 1992. 166p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-87ER60581. Order Number DE94001797. Source: OSTI; NTIS; GPO Dep.

The entry rate of ^{22}Rn into a basement structure was measured continuously. These measurements demonstrated that radon entry did not vanish even when the structure was slightly pressurized. This persistent entry has been determined to be dominated by diffusion through the floor and walls and a combination of diffusion and convection through the floor-wall joint. The highest indoor radon concentrations occurred during calm periods when the pressure differentials between the inside and outside of the structure were small. The objectives of this work were to identify the origins of the radon and investigate the entry pathways. The radon could originate either in the concrete or in the soil surrounding the structure. Entry pathways into the basement were through the concrete floor and walls as well as through the floor-wall joint. The contributions of the origins and entry pathways were determined by continuously measuring the radon entry rate into the basement, using a trace gas system, and the flux density through portions of the floor and walls. Radon entry through the floor-wall joint could be controlled using a baseboard barrier system. Results indicated that, during calm conditions with wind speeds less than 1 m s^{-1}, 25 % of the radon enters through the floor-wall joint and 75 % enters through the concrete. About 30 % of the radon originated in the concrete floor and walls. A method for in-situ determination of the diffusion length and emanation fraction of radon in concrete was developed. For the concrete used in the structure, the average diffusion length and emanation fraction were 27 ± 4 cm and 0.19 ± 0.02 respectively.

7433 (DOE/ER/60844–3) **Experimental assessment and modeling of interphase mass transfer rates of organic compounds in multiphase subsurface systems: Final report, July 1, 1989–June 30, 1993.** Abriola, L.M.; Weber, W.J. Jr. Michigan Univ., Ann Arbor, MI (United States). Oct 1993. 65p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-89ER60844. Order Number DE94003983. Source: OSTI; NTIS; GPO Dep.

Results of an experimental investigation into strady state dissolution of nonaqueous phase liquids (NAPLS) entrapped within water saturated porous media are presented. Influence of porous media type, NAPL characteristics, and aqueous phase flow velocity are examined for transient and steady-state dissolution of NAPL.

Entrapped NAPL distributions are examined and are found to influence mass transfer between the phases. A phenomenological model for the steady state mass transfer process is developed which expresses a lumped mass transfer coefficient as a function of the hydrodynamics of the system and grain size parameters as a surrogate measure of the NAPL distribution. Transient dissolution data is used to develop two alternative phenomenological models for mass transfer. The models are incorporated into a onedimensional numerical simulator and are shown to be effective predictors of transient dissolution data in similar experimental systems. In order to further explore the effects of scale and heterogeneities on NAPL dissolution, the sphere model is incorporated into a twodimensional simulator and is used to explore long-term dissolution of a TCE (trichloroethylene) spill in a layered system of sands. The simulation demonstrates the significance of heterogeneity, both in controlling the initial distribution of NAPL and the rate of NAPL dissolution.

7434 (DOE/FTR–93018762) **Travel to Vienna, Austria for meeting on modelling radionuclide transfer in the environment: Foreignn trip report, March 1–9, 1991.** Templeton, W.L. Pacific Northwest Lab., Richland, WA (United States). 5 Apr 1991. 50p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE93018762. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The purpose of this travel was to the "Validation of Models for the Transfer of Radionuclides in Terrestrial, Aquatic and Urban Environments," research coordination meeting. The traveler also attended a meeting of the International Union of Radioecologists Environmental Modelling Working Group, and a meeting of contractors to the Commission for European Communities Radiation Protection Program.

7435 (DOE-HMIP-RR–93.026) **Evaluation of host rocks and background lithologies as secondary contributors to the uranium and rare-earth element source-term at the Needle's Eye natural analogue site.** Hyslop, E.K. (British Geological Survey, Edinburgh (United Kingdom). Mineralogy and Petrology Group); Pearce, J.M. Department of the Environment, London (United Kingdom). Her Majesty's Inspectorate of Pollution. 1993. 46p. (BGS-TR-WE–92/32.). Order Number DE94610460. Source: OSTI; NTIS (US Sales Only); INIS.

HMIP has a research programme investigating some naturally radioactive sites in the UK as geochemical analogues of radionuclide migration. The objective is to test thermodynamic database and computer codes used for modelling radionuclide migration under environmental conditions. This report describes a study of the distributions of uranium (U) and the rare-earth elements (REE) in the vicinity of pitchblende veins outcropping in the cliff at Needle's Eye on the Solway Coats, SW Scotland. This report improves the information available on the secondary source-terms of U and REE. The minerals in the country rocks are thought to be supplying only minor amounts of these elements to the groundwaters flowing into the Merse silts within the detailed study area close to the mineralisation in the cliff. The pitchblende veins are the principal source-term for U migrating into the Merse silts at the foot of the cliff. (author).

7436 (DOE/MC/29119–3524) **Innovative directional and position specific sampling technique: Phase I: Final report, July 28, 1992–April 28, 1993.** Hutzel, W.J.; Foster, E.L. UTD, Inc., Newington, VA (United States). Apr 1993. 34p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC21-92MC29119. Order Number DE94000049. Source: OSTI; NTIS; INIS; GPO Dep.

UTD, Incorporated has developed a unique real-time, in-situ POsition LOcation (POLO) device which will directly enhance the DOE Environmental Restoration and Waste Management Program through improvements to finding contamination, identifying extent of contamination, remediating, and finally monitoring sites. POLO is smaller than existing technology and is unaffected by the presence of steel and other magnetic materials. The size of the device offers for the first time, the possibility to accurately determine the location of a penetrometer. It will be usable, in its present form, to map the position of a sampling device as that device is inserted into the hole. A three phase program with a 21 month period of performance was proposed to DOE to take the POLO system through the three levels of maturity prior to commercialization. The goal of Phase I of the contract, "Innovative and Position Specific Sampling Technique" was to analyze, test, and refine the individual subsystems of the POLO system. The goals were accomplished and the success criteria met by engineering design and precision construction of the various system components. A prototype module was designed, constructed, and calibrated. The final report presented here details the design, manufacture, and testing of each POLO component (sub-scale) in an experimental configuration. A comprehensive error analysis summarizes the performance and demonstrates that all project goals have been met. Plans for commercialization of POLO are discussed and highlight the expected smooth transition to full scale production.

7437 (DOE/NV/10630–66-Vol.1) **US Department of Energy Nevada Operations Office annual site environmental report, 1992: Volume 1.** Black, S.C.; Latham, A.R.; Townsend, Y.E. (eds.). Reynolds Electrical and Engineering Co., Inc., Las Vegas, NV (United States). Sep 1993. 350p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC08-89NV10630. Order Number DE94003235. Source: OSTI; NTIS; INIS; GPO Dep.

This report contains the environmental monitoring and assessment results for the Nevada Test Site for 1992. Monitoring and surveillance on and around the NTS by DOE contractors and Site user organizations during 1992 indicated that underground nuclear testing operations were conducted in compliance with regulations, i.e., the dose the maximally exposed offsite individual could have received was less than 0.15 percent of the guideline for air exposure. All 1992 nuclear events took place during the first three quarters of the calendar year prior to the Congressional testing moratorium. All discharges of radioactive liquids remained onsite in containment ponds, and there was no indication of potential migration of radioactivity to the offsite area through groundwater. Surveillance around the NTS indicated that airborne radioactivity from test operations was not detectable offsite, and no measurable net exposure to members of the offsite population was detected through the offsite dosimetry program. Using the CAP88-PC model and NTS radionuclide emissions data, the calculated maximum effective dose equivalent offsite would have been 0.012 mrem. Any person receiving this dose was also exposed to 78 mrem from natural background radiation. There were no nonradiological releases to the offsite area. Hazardous wastes were shipped to EPA-approved disposal facilities. Compliance with the various regulations stemming from the National Environmental Policy Act is being achieved and, where mandated, permits for air and water discharges and waste management have been obtained from the appropriate agencies. Non-NTS support facilities complied with the requirements of air quality permits and state or local wastewater discharge and hazardous waste permits.

7438 (DOE/NV/10630–66-Vol.2) **US Department of Energy Nevada Operations Office annual site environmental report, 1992: Volume 2, Appendices.** Black, S.C.; Latham, A.R.; Townsend, Y.E. (eds.). Reynolds Electrical and Engineering Co., Inc., Las Vegas, NV (United States). Sep 1993. 375p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC08-89NV10630. Order Number DE94003236. Source: OSTI; NTIS; INIS; GPO Dep.

These appendices contain 1992 NTS onsite and offsite environmental monitoring results. The onsite data presented are accompanied by summaries of statistical evaluations of the data. Other offsite data collected by the EPA are available from the US Environmental Protection Agency, Environmental Monitoring Systems Laboratory, Las Vegas, Nevada.

7439 (DOE/OR/00033–T543) **Population differentiation in tree-ring growth response of white fir (Abies concolor) to climate: Implications for predicting forest responses to climate change.** Jensen, D.B. Oak Ridge Inst. for Science and Education, TN (United States); California Univ., Berkeley, CA (United States). [1993]. 143p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-76OR00033. Order Number DE94000837. Source: OSTI; NTIS; GPO Dep.

Forest succession models and correlative models have predicted 200–650 kilometer shifts in the geographic range of temperate forests and forest species as one response to global climate change. Few studies have investigated whether population differences may effect the response of forest species to climate change. This study examines differences in tree-ring growth, and in the phenotypic plasticity of tree-ring growth in 16-year old white fir, Abies concolor, from ten populations grown in four common gardens in the Sierra Nevada of California. For each population, tree-ring growth was modelled as a function of precipitation and degree-day sums. Tree-ring growth under three scenarios of doubled $C0_2$ climates was estimated.

7440 (DOE/OR/00033–T555) **A correlation between soil descriptions and ^{226}Ra concentrations in Florida soils.** Harrison, D.P. Oak Ridge Inst. for Science and Education, TN (United States). 1992. 75p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-76OR00033. Order Number DE94000849. Source: OSTI; NTIS; GPO Dep.

The soil radium content in Florida is highly variable. The range in radium concentrations, where the samples involved in this study are concerned, is from 0.1 pCi/g to 18.5 pCi/g. Low ^{226}Ra concentrations (0.1 to 5 pCi/g) are evidenced in sands, moderate concentrations (5 to 11 pCi/g) are found in silt and gravel, and high ^{226}Ra concentrations (>11 pCi/g) are found in soil horizons with shell, clay, and strata with phosphate. Strata containing phosphate yields a high concentration of ^{226}Ra. The information obtained in this study, soil descriptions with their corresponding ^{226}Ra concentrations, comes from geological cores drilled by geotechnical consultants with gamma spectrometry analysis performed by high resolution gamma spectroscopy. Concentration; of ^{226}Ra generally increase with depth. These cores are usually terminated at 20 feet deep, with some cores being shallower than this due to hitting bedrock or encountering the water table. These frequency distributions give the core-logging geologist an approximate concentration of ^{226}Ra based on the description of the soil. Since the correlation of ^{226}Ra and soil descriptions can be used as a tool in assigning indoor radon potential, this study is of importance to land managers, contractors, developers, and regulating agencies who are attempting to place standards on tracts of land with ^{226}Ra concentration used as a criterion.

7441 (DOE/OR/00033–T569) **A study of radon-222 concentrations in North Carolina groundwater.** Evans, J.P. Oak Ridge Associated Universities, Inc., TN (United States); North Carolina Univ., Chapel Hill, NC (United States). 1992. 80p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-76OR00033. Order Number DE94001412. Source: OSTI; NTIS; INIS; GPO Dep.

The groundwater of 400 North Carolina homes was sampled to ascertain the distribution and extent of ^{222}Rn in North Carolina groundwater. Arithmetic mean (AM) and geometric mean (GM) concentrations of 1,816 pCi L^{-1} and 656 pCi L^{-1} were found for the state. These results indicate that two-thirds of 114°C. homes served by groundwater exceed the EPA proposed 300 pCi L^{-1} maximum contaminant level (MCL). Only 2% of NC homes exceeded 10,000 pCi L-1. The Eastern region had the lowest radon concentrations by far, with a GM of 2-)0 pCi L^{-1}. The Central region and Western region had GM's of 794 pCi L^{-1} and 1,032 pCi L^{-1} respectively. The groundwater data approached a log normal distribution. No consistent trends were noted in the relationship between indoor radon concentrations and groundwater radon concentrations. A correlation coefficient of 0.00921 revealed a very weak linear relationship.

7442 (DOE/RL–89-12-Rev.1) **Hanford Site Groundwater Protection Management Program: Revision 1.** Westinghouse Hanford Co., Richland, WA (United States). Nov 1993. 82p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. Order Number DE94005512. Source: OSTI; NTIS; INIS; GPO Dep.

Groundwater protection is a national priority that is promulgated in a variety of environmental regulations at local, state, and federal levels. To effectively coordinate and ensure compliance with applicable regulations, the US Department of Energy has issued DOE Order 5400.1 (now under revision) that requires all US Department of Energy facilities to prepare separate groundwater protection program descriptions and plans. This document describes the Groundwater Protection Management Program for the Hanford Site located in the state of Washington. DOE Order 5400.1 specifies that the Groundwater Protection Management Program cover the following general topical areas: (1) documentation of the groundwater regime, (2) design and implementation of a groundwater monitoring program to support resource management and comply with applicable laws and regulations, (3) a management program for groundwater protection and remediation, (4) a summary and identification of areas that may be contaminated with hazardous waste, (5) strategies for controlling these sources, (6) a remedial action program, and (7) decontamination and decommissioning and related remedial action requirements. Many of the above elements are covered by existing programs at the Hanford Site; thus, one of the primary purposes of this document is to provide a framework for coordination of existing groundwater protection activities. Additionally, it describes how information needs are identified and can be incorporated into existing or proposed new programs. The Groundwater Protection Management Program provides the general scope, philosophy, and strategies for groundwater protection/management at the Hanford Site. Subtier documents provide the detailed plans for implementing groundwater-related activities and programs. Related schedule and budget information are provided in the 5-year plan for environmental restoration and waste management at the Hanford Site.

7443 (EML–557) **In situ gamma-ray spectrometry: A tutorial for environmental radiation scientists.** Miller, K.M.; Shebell, P. USDOE Environmental Measurements Lab., New York, NY (United States). Oct 1993. 45p. Sponsored by USDOE, Washington, DC (United States). Order Number DE94003691. Source: OSTI; NTIS; INIS; GPO Dep.

This tutorial is intended for those in the environmental field who perform assessments in areas where there is radioactive contamination in the surface soil. Techniques will be introduced for performing on-site quantitative measurements of gamma radiation in the environment using high resolution germanium detectors. A basic understanding of ionizing radiation principles is assumed; however, a detailed knowledge of gamma spectrometry systems is not required. Emphasized is the practical end of operations in the field and the conversion of measured full absorption peak count rates in a collected spectrum to meaningful radiological quantities, such as the concentration of a radionuclide in the soil, activity per unit area, and dose rate in the air. The theory of operation and calibration procedures will be covered in detail to provide the necessary knowledge to adapt the technique to site-specific problems. Example calculations for detector calibration are also provided.

7444 (INIS-mf–13733) **Activity report 1990-1992 and proceedings. Volume I.** Mayer-Rosa, D.; Waniek, L.; Suhadolc, P. Ceskoslovenska Akademie Ved, Prague (Czech Republic). Geofyzikalni Ustav. 1993. 247p. (CONF-9209428–: 23. general assembly of the European Seismological Commission, Prague (Czech Republic), 7-12 Sep 1992). Order Number DE94610480. Source: OSTI; NTIS (US Sales Only); INIS.

A report on the activities of the European Seismological Commission (ESC) during the period 1990-1992 together with the Proceedings of the General Assembly of theESC are presented in two volumes. Volume I covers the following topics: recent strong earthquakes in Europe, regional seismicity, historical earthquakes in Europe, statistical models and methods in seismology, numerical modelling in three-dimensional media, methodology of quantification of European earthquakes and recent results, seismic noise and signal detectability, regional seismic network and history of seismometry. One paper dealing with microseismic noise characteristics around the Kozloduy nuclear power plant has been inputted to INIS. (Z.S.).

7445 (INIS-mf–13733, pp. 167-170) **Investigation of spectral and spatial microseismic noise characteristics around Kozloduy NPP (Bulgaria).** Ouzounov, D. (Bulgarian Academy of Sciences, Sofia (Bulgaria). Geophysical Institute); Dineva, S.; Michailov, D.; Petrov, L. Ceskoslovenska Akademie Ved, Prague (Czech Republic). Geofyzikalni Ustav. 1993. (CONF-9209428–: 23. general assembly of the European Seismological Commission,

Prague (Czech Republic), 7-12 Sep 1992). In *Activity report 1990-1992 and proceedings. Volume I: Proceedings.* 247p. Order Number DE94610480. Source: OSTI; NTIS (US Sales Only); INIS.

Microseismic noise (MSN) characteristics were studied in the vicinity of the Kozloduy nuclear power plant NPP. The observations were performed using the noise tomography method at 25 different points in the 50-km area south of the plant. Short-period three-component digital recordings (0.2-25 Hz) with a duration of 300 s and sample rate of 50 Hz were performed. The results on MSN frequency and spatial characteristics show the absence of large heterogeneity structures within the radius of 50 km from the Kozloduy plant; this is consistent with all available geophysical information about the region investigated. (Z.S.) 1 tab., 7 figs., 5 refs.

7446 (INIS-mf–13734) **Activity report 1990-1992 and proceedings. Volume II.** Mayer-Rosa, D.; Waniek, L.; Suhadolc, P. Ceskoslovenska Akademie Ved, Prague (Czech Republic). Geofyzikalni Ustav. 1993. 213p. (CONF-9209428–: 23. general assembly of the European Seismological Commission, Prague (Czech Republic), 7-12 Sep 1992). Order Number DE94610481. Source: OSTI; NTIS (US Sales Only); INIS.

A report of the European Seismological Commission (ESC) on 1990-1992 activities and Proceedings of the General Assembly of the ESC are presented in two volumes. Volume II covers the following topics: study of seismic sound, seismotectonic analysis, deep seismic sounding, the three-dimensional structure of the European lithosphere-asthenosphere system, complexity in earthquake occurrence, earthquake hazard, strong and weak earthquake ground motions, macroseismology, microzonation, and applications in earthquake engineering. One paper dealing with the connection between seismicity and the CO_2-^{222}Rn content in spring water has been inputted to INIS. (Z.S.).

7447 (INIS-mf–13759) **Transuranium elements leaching from simulated HLW glasses in synthetic interstitial claywater.** Wang, L. Louvain Univ. (Belgium). Aug 1992. 96p. Order Number DE94610461. Source: OSTI; NTIS (US Sales Only); INIS.

The main objective of this Master Thesis is to measure the steady-state concentrations of Pu, Np, and Am upon the leaching of High-Level Waste Glass in two types of synthetic claywater: humic acid free and humic acid containing synthetic claywater. The synthetic claywater has a composition that is representative for the in-situ interstitial groundwater of the Boom clay formation, a potential geological repository of radioactive waste in Belgium. The steady-state concentrations of transuranium elements were measured by leaching experiments with a typical duration of 400 days. Five main conclusions are drawn from the experimental data. (1) The transuranium elements that are released from simulated High Level Waste Glass are dominantly present in the synthetic claywater solutions as colloids. These colloids are smaller than 2 nm in absence of humic acids. In the presence of humic acids however, the colloids interact with actinides (adsorb or coagulate) and form particles larger than 2 nm. Np and Am are associated with inorganic and organic colloids in the synthetic interstitial claywater solution whereas Pu forms only inorganic colloids. (2) The steady-state concentration of Pu is in good agreement with the solubility of the Pu compound $PuO_2.xH_2O$. It is therefore concluded that $PuO_2.xH_2O$ is the solubility controlling phase. (3) The Pu(IV)-species are dominant in the leaching solutions. Carbonate and humic acid complexes are negligible. (4) The steady-state concentrations of Np and Am in leaching solutions were much lower than the values calculated on the basis of known thermodynamic data. This indicates that the solubility controlling phases for Np and Am were not correctly identified or that the measured Np and Am concentrations were not steady-state values. (5) Non-active glass leaching tests have indicated that no organic colloids were formed as a result of glass dissolution. (A.S.).

7448 (Juel–2760) **Measuring program of the Federal Republic of Germany: Results of the environment measurements in Russia, Belarus and Ukraine from May 12 to September 26, 1992.** Heinemann, K.; Hille, R. Forschungszentrum Juelich GmbH (Germany). Abt. Sicherheit und Strahlenschutz. May 1993. 115p. (In German). Order Number DE94734098. Source: OSTI; NTIS (US Sales Only); INIS.

21 scientists and engineers conducted environmental measurement and determined the contamination of soil and foodstuff. Samples of food of the population were measured received and the results were given in a certificate with short explanation in the native language. In 3 appendices of this report all results are given in detail. They are discussed in the way of local mean values. In regard to one year earlier the external dosis and the soil contaminations are nearly constant. But the milk contaminations decreased significantly. (orig.)

7449 (KFK–5154) **Contaminated soils and treatment technologies from the chemist's point of view (a summary of literature).** Boukis, N. Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Heisse Chemie; Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Schadstoff- und Abfallarme Verfahren (PSA). Jan 1993. 101p. (In German). Order Number DE94733997. Source: OSTI; NTIS (US Sales Only).

The aim of this study is to provide the reader with some general informations and a comprehensive bibliography about the following subjects: contaminated soils in general, types of soils and their components, common contaminants, their analysis and upper limit values, and technologies of treatment of contaminated soils. (orig.)

7450 (LA-UR–93-3992) **The Nevada Test Site: An analog for a nuclear repository.** Thompson, J.L. Los Alamos National Lab., NM (United States). [1993]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-931201–3: 4. international conference on chemistry and migration behavior of actinides and fission products in the geosphere, Charleston, SC (United States), 12-17 Dec 1993). Order Number DE94003956. Source: OSTI; NTIS; INIS; GPO Dep.

The United States proposes to store high level nuclear wastes underground; a site at Yucca Mountain in southern Nevada is currently under evaluation. A major concern is that radioactive materials may dissolve in the groundwater and be transported to the accessible environment. At the Nevada Test Site (NTS) adjacent to Yucca Mountain underground nuclear tests have been conducted for over 30 years. Radionuclides (unreacted fissile material, activation products, fission products) from these tests remain underground with no confinement by engineered barriers. The US Department of Energy has supported studies since 1973 designed to measure the distribution of these radionuclides and to evaluate the processes by which they might be transported by groundwater. The authors describe here some of what they have learned about how radionuclides are distributed around nuclear test cavities and how they interact with groundwater.

7451 (LBL–34460) **Design calculations for a combined ventilation and brine injection experiment at the Grimsel Rock Laboratory, Switzerland.** Finsterle, S.; Pruess, K. Lawrence Berkeley Lab., CA (United States). Jul 1993. 40p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE94004936. Source: OSTI; NTIS; INIS; GPO Dep.

A combined ventilation and brine injection test is planned at the Grimsel Test Site. The objective of the experiment is to study the transport of liquid and gas in the vicinity of a ventilated drift in order to evaluate the impact of the drying process on the characterization of the rock matrix. The proposed test sequence includes a desaturation-resaturation cycle. In addition, brine and fresh water will be injected from a borehole as trace electrolytes in order to better track the propagation of the individual phases. Results of design calculations using the TOUGH2 code show that injection of brine may significantly influence the unsaturated flow behavior by changing the pressure and saturation distribution around the borehole. Transport velocity is predicted to be very slow, requiring several months for the brine to reach the draft wall. However, the presence of preferential flow paths may reduce travel time and alter brine content and saturation distribution so that certain sensors may respond earlier or not at all.

7452 (LBL–34838) **Hydrogeologic characterization of a fractured granitic rock aquifer, Raymond, California.** Cohen, A.J.B. Lawrence Berkeley Lab., CA (United States). Oct 1993. 108p. Sponsored by USDOE, Washington, DC (United States);Environmental Protection Agency, Washington, DC (United

States). DOE Contract AC03-76SF00098. Order Number DE94005205. Source: OSTI; NTIS; GPO Dep.

The hydrogeologic properties of a shallow, fractured granitic rock aquifer in the foothills of the Sierra Nevada, California were investigated via the analysis of borehole geophysical logs and pumping tests. The drawdowns produced during these tests are not indicative of any simple conceptual aquifer model, and borehole logs show that the granite is intensely fractured. These observations are suggestive of a complex fracture-flow geometry which is extremely difficult to decipher. However, through the measurement of orientations of individual subsurface fractures from acoustic televiewer logs, and correlation between particular fractures and electrical resistivity and thermal-pulse flowmeter logs, it was found that the aquifer is, in general, comprised of two subhorizontal and nearly parallel zones of unloading fractures. Downhole flowmeter measurements taken in several wells provide further evidence for the inferred dual-layer structure of the aquifer, as well as yield quantitative measures of the contribution of flow from each zone. Analysis of drawdowns in pumped wells reveals that there are zones of relatively high transmissivity immediately around them. It was found that these properties, as well as a nearby zone of lower transmissivity, can account for their observed drawdowns. A numerical model was constructed to test whether these major heterogeneities could also account for the drawdowns in observation wells. This stepwise analysis of both the geophysical and hydrological data resulted in the formulation of a conceptual model of the aquifer which is consistent with observations, and which can account for its behavior when subjected to pumping.

7453 (PNL–8935) **Plant reestablishment after soil disturbance: Effects of soils, treatment, and time.** Brandt, C.A.; Alford, K.; McIlveny, G.; Tijerina, A. Pacific Northwest Lab., Richland, WA (United States). Nov 1993. 29p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE94003677. Source: OSTI; NTIS; INIS; GPO Dep.

The Pacific Northwest Laboratory examined plant growth and establishment on 16 sites where severe land disturbance had taken place. The purpose of the study was to evaluate the relative effectiveness of the different methods in term of their effects on establishment of native and alien plants. Disturbances ranged from 1 to 50 years in age. Revegetation using native plants had been attempted at 14 of the sites; the remainder were abandoned without any further management. Revegetation efforts variously included seeding, fertilizer application, mulching with various organic sources, compost application, application of Warden silt loam topsoil over sand and gravel soils, and moderate irrigation.

7454 (PNL–8945) **Conversion of Hanford site well locations to Washington coordinate system of 1983, South Zone 1991 (WCS83S).** Burnett, R.A. (Pacific Northwest Lab., Richland, WA (United States)); Tzemos, S.; Dietz, L.A. Pacific Northwest Lab., Richland, WA (United States). Dec 1993. 90p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE94004567. Source: OSTI; NTIS; INIS; GPO Dep.

Past construction and survey practices have resulted in the use of multiple local coordinate systems for measuring and reporting the horizontal position of wells and other facilities and locations on the Hanford Site. This report describes the development of a coordinate transformation process and algorithm and its application to the conversion of the horizontal coordinates of Hanford site wells from the various local coordinate systems and datums to a single standard coordinate system, the Washington Coordinate system of 1983, South Zone 1991 (WCS83S). The coordinate transformation algorithm, implemented as a computer program called CTRANS, uses standard two-dimensional translation, rotation, and scaling transformation equations and can be applied to any set of horizontal point locations. For each point to be transformed, the coefficients of the transformation equations are calculated locally, using the coordinates of the three nearest registration points (points with known locations in both coordinate systems). The report contains a discussion of efforts to verify and validate both the software and the well location data, a description of the methods used to estimate transformation and registration point accuracy, instructions for using the computer program, and a summary of the Hanford well conversion results for each local coordinate system and datum. Also included are the results of using recent U.S. Army Corps of Engineers survey data to obtain estimated measures of location errors in wells for which the local coordinate data source is undocumented, unverified, and therefore of unknown accuracy.

7455 (PNL–8958) **A summary of chemical and biological testing of proposed disposal of sediment from Richmond Harbor relative to the Deep Off-Shelf Reference Area, the Bay Farm Borrow Area, and the Alcatraz Environs Reference Area.** Mayhew, H.L. (Battelle/Marine Sciences Lab., Sequim, WA (United States)); Karle, L.M.; Gruendell, B.D.; Pinza, M.R. Pacific Northwest Lab., Richland, WA (United States). Dec 1993. 143p. Sponsored by Department of Defense, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE94004587. Source: OSTI; NTIS; GPO Dep.

The US Army Corps of Engineers was authorized to dredge Richmond Harbor to accomodate large, deep-draft vessels. An ecological evaluation of the Harbor sediments was performed describing the physical characteristics, toxic substances, effects on aquatic organisms,and potential for bioaccumulation of chemical contaminants. The objective of this report is to compare the sediment chemistry, acute toxicity, and bioaccumulation results of the Richmond Harbor sediments to each of the reference areas; i.e., the Deep Off-Shelf Reference Area, the Bay Farm Borrow Area, and the Alcatraz Environs Reference Area. This report will enable the US Army Corps of Engineers to determine whether disposal at a reference area is appropriate for all or part of the dredged material from Richmond Harbor. Chemical analyses were performed on 30 sediment samples; 28 of those samples were then combined to form 7 composites. The seven composites plus sediment from two additional stations received both chemical and biological evaluations.

7456 (PNL-SA–20825) **Investigation of electric fields for low-temperature treatment of soils and liquids.** Heath, W.O.; Goheen, S.C.; Miller, M.C.; Richardson, R.L. Pacific Northwest Lab., Richland, WA (United States). Feb 1992. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-920220–2: International specialty conference: in situ treatment of contaminated soil and water, Cincinnati, OH (United States), 4-6 Feb 1992). Order Number DE94004288. Source: OSTI; NTIS; INIS; GPO Dep.

Work was performed to assess the feasibility of an in situ technology for decomposing and removing hazardous organic waste compounds from soils. The technology is based on conductive soil heating and partial electrical discharges (corona) combined with soil-vapor extraction. A pilot-scale facility was developed and used to evaluate the ability to heat and dry soils using polyphase electricity applied through inserted pipes. Uniform heating (100 $\pm$ 2°C) and drying to 1.2-wt % moisture were observed. Heating and resultant in situ steam formation have been demonstrated in previous studies to be effective in removing volatile and semivolatile compounds. Corona reactors were constructed to investigate decomposition of organic compounds by oxidants produced in a point-to-liquid corona discharge in ambient air at room temperature and pressure. Point-to-liquid corona was found to be capable of destroying a wide variety of organics, including three aromatics, two polyaromatics, a pcp, a pcb, an alkane, an alkene, an amide, a complexant, a chelator, and an organic dye. Tests with trichloroethylene demonstrated a decontamination factor of 2×10^5 (equal to a destruction efficiency of 99.999995%) and nearly complete (99.7%) mineralization, with the main byproduct being aqueous chloride ions. Real-time data on the decolorization kinetics of aqueous methylene blue were obtained using in situ probe colorimetry. Reaction rates were directly proportional to the amount of unreacted dye present and the square of electrode current. Other exploratory tests were performed to investigate concepts for generating ac corona discharges in soil and the ability of those discharges to decompose adsorbed organic compounds. All findings are discussed in relation to a conceptual soil-treatment scenario that includes a description of the basic hardware requirements.

7457 (PNL-SA–22677) **The UFA method for site characterization and remediation.** Wright, J.V. (Pacific Northwest Lab., Richland, WA (United States)); Leather, J.M.; Conca, J.L. Pacific

Northwest Lab., Richland, WA (United States). Oct 1993. 21p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-931095–68: Department of Energy environmental remediation conference, Augusta, GA (United States), 24-28 Oct 1993). Order Number DE94004291. Source: OSTI; NTIS; INIS; GPO Dep.

Direct measurement was made of the unsaturated hydraulic conductivity of soils and sediments using a new experimental method. The experimental method, which uses the Unsaturated Flow Apparatus (UFA™), employs open-flow centrifugation in a new application. Centrifugation, like gravity, has the effect on a material of a whole-body force exerting equal force at all points within the sample. The equivalent gravitational force exerted throughout the sample is from one to four orders of magnitude higher than earth gravity (from 10 to 10,000 g). The result is an increase in rate of fluid flow equally at all points throughout the sample so that hydraulic steady state is obtained in most geologic materials in a few hours, even at very unsaturated conditions. This extraordinarily short time allows direct measurement of transport parameters, such as hydraulic conductivity, diffusion coefficient, and retardation factors, in any porous media over the complete range of field moisture contents. Traditional techniques and estimation methods require months to years to obtain these data, and cannot provide data for samples at low water contents. Predictive modeling, site restoration strategies, and remediation formulations can be rapidly tested with the UFA method prior to costly and time-consuming field demonstrations. From 8 to 14 measurements of hydraulic conductivity as a function of decreasing volumetric water content were made on each of approximately 50 aridisol samples from a former waste disposal area at Hanford Site in Washington State. This provided over 500 data points to define the characteristic behavior, with respect to Hanford Site vadose zone water for these soils and sediments. The large hydraulic conductivity data set provided information for mapping the subsurface recharge distribution below an area where disposal of large quantities of liquid wastes occurred during a half-century of government weapons research.

7458 (PNWD–1980-13-HEDR) **Hanford Environmental Dose Reconstruction Project, Quarterly report, September–November 1993.** Cannon, S.D.; Finch, S.M. (comps.). Pacific Northwest Lab., Richland, WA (United States). [1993]. 84p. Sponsored by Department of Health and Human Services, Washington, DC (United States). DOE Contract AC06-76RL01830. Contract 200-92-0503(CDC)18620(BNW). Order Number DE94004755. Source: OSTI; NTIS; INIS; GPO Dep.

The objective of the Hanford Environmental Dose Reconstruction (HEDR) Project is to estimate the radiation doses that individuals and populations could have received from nuclear operations at Hanford since 1944. The project is divided into the following technical tasks. These tasks correspond to the path radionuclides followed from release to impact on humans (dose estimates); Source Terms, Environmental Transport, Environmental Monitoring Data, Demography, Food Consumption, and Agriculture, and Environmental Pathways and Dose Estimates.

7459 (UCRL-ID–110051) **Possible differences in biological availability of isotopes of plutonium: Report of a workshop.** Kercher, J.R.; Gallegos, G.M. (eds.). Lawrence Livermore National Lab., CA (United States). Sep 1993. 56p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9008144–Summ.: Workshop on possible differences in biological availability of isotopes of Plutonium, Las Vegas, NV (United States), 28-29 Aug 1990). Order Number DE94003878. Source: OSTI; NTIS; INIS; GPO Dep.

This paper presents the results of a workshop conducted on the apparent different bioavailability of isotopes ^{238}Pu and ^{239}Pu. There is a substantial body of evidence that ^{238}Pu as commonly found in the environment is more biologically available than ^{239}Pu. Studies of the Trinity Site, Nevada Test Site from nonnuclear and nuclear events, Rocky Flats, Enewetak and Bikini, and the arctic tundra support this conclusion and indicate that the bioavailability of ^{238}Pu is more than an order of magnitude greater than that of ^{239}Pu. Plant and soil studies from controlled environments and from Savannah River indicate no isotopic difference in availability of Pu to plants; whereas studies at the Trinity Site do suggest a difference. While it is possible that these observations can be explained by problems in the experimental procedure and analytical techniques, this possibility is remote given the ubiquitous nature of the observations. Studies of solubility of Pu in the stomach contents of cattle grazing at the Nevada Test Site and from fish from Bikini Atoll both found that ^{238}Pu was more soluble than ^{239}Pu. Studies of the Los Alamos effluent stream indicate that as particle size decreases, the content of ^{238}Pu relative to ^{239}Pu increases.

7460 (UCRL-JC–113059) **ARAC: A flexible real-time dose consequence assessment system.** Ellis, J.S.; Sullivan, T.J. Lawrence Livermore National Lab., CA (United States). 7 Oct 1993. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48 ; AC08-88NV10617. (CONF-9310101–2: Asia and Pacific Basin Regional Congress on radiation protection, Beijing (China), 18-22 Oct 1993). Order Number DE94003627. Source: OSTI; NTIS; INIS; GPO Dep.

Since its beginning, the Atmospheric Release Advisory Capability (ARAC), an emergency radiological dose assessment service of the US Government, has been called on to do consequence assessments for releases into the atmosphere of radionuclides and a variety of other substances. Some of the more noteworthy emergency responses have been for the Three Mile Island and Chernobyl nuclear power reactor accidents, and more recently, for a cloud of gases from a rail-car spill into the Sacramento river of the herbicide metam sodium, smoke from hundreds of burning oil wells in Kuwait, and ash clouds from the eruption of Mt. Pinatubo. The spatial scales of these responses range from local, to regional, to global, and the response periods from hours, to weeks, to months. Because of the variety of requirements of each unique assessment, ARAC has developed and maintains a flexible system of people, computer software and hardware.

7461 (USGS-WRI–92-4065) **An estimate of the roughness length and displacement height of Sonoran Desert vegetation, south-central Arizona.** Claassen, H.C. (Geological Survey, Denver, CO (United States)); Riggs, A.C. Geological Survey, Denver, CO (United States); Geological Survey, Reston, VA (United States). 1993. 20p. Sponsored by USDOE, Washington, DC (United States);Geological Survey, Reston, VA (United States). DOE Contract AI08-92NV10874 ; AI08-78ET44802. Order Number DE94003606. Source: OSTI; NTIS; GPO; U.S. Geological Survey, Books and Open-File Reports Section, Box 25425, Mail Stop 517, Federal Center, Denver, CO 80225-0425; GPO Dep.

A somewhat unconventional technique using a tethered balloon was used to estimate the roughness length for momentum (z_m) and displacement height (d) for typical Sonoran Desert vegetation. It has been suggested that measurements of the meteorological fluxes of momentum, sensible heat, and latent heat are best done at heights above ground level determined by either the roughness length (z_m) or the size and shape of vegetation. Therefore, estimates of z_m and vegetation characteristics are a desirable prerequisite to developing a flux-measurement protocol. Because the literature contains little information on z_m for Sonoran Desert vegetation, it is desirable to measure z_m and the displacement height (d) associated with Sonoran Desert vegetation.

7462 (WHC-SP–0665-8) **Quarterly environmental radiological survey summary: First quarter 1993, 100, 200, 300, and 600 Areas.** McKinney, S.M. Westinghouse Hanford Co., Richland, WA (United States). Apr 1993. 22p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. Order Number DE94002654. Source: OSTI; NTIS; GPO Dep.

Routine radiological surveys to monitor conditions of outdoor sites are performed by Westinghouse Hanford Company's Health Physics Group. Areas surveyed include the road surfaces, radioactive waste storage and disposal sites (cribs, trenches, burial grounds, stabilized ponds and ditches), and unplanned release sites. (See figures 1 through 10.) This report provides a summary of the radiological surveys performed on waste sites during the First Quarter of 1993. The status of corrective action required from current and past reports are also discussed.

7463 (WSRC-MS–93-362-Rev.1) **In situ bioremediation via horizontal wells: Revision 1.** Hazen, T.C.; Looney, B.B.; Enzien,

M.; Dougherty, J.M.; Wear, J.; Fliermans, C.B.; Eddy, C.A. Westinghouse Savannah River Co., Aiken, SC (United States). [1993]. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. (CONF-9209427--1-Rev.1: Michigan Biotechnology Institute symposium, Grand Rapids, MI (United States), 10-15 Sep 1992). Order Number DE94004033. Source: OSTI; NTIS; INIS; GPO Dep.

The test consisted of methane mixed with air into the contaminated aquifer via a horizontal well and extraction from the vadose zone via a parallel horizontal well. This configuration has the advantage of simultaneously stimulating methanotrophic activity in both the groundwater and vadose zone, and inhibiting spread of the contaminant plume. Groundwater was monitored biweekly from 13 wells for a variety of chemical and microbiological parameters. Groundwater from wells in affected areas showed increases in methanotrophs of more than 1 order of magnitude every 2 weeks for several weeks after 1% methane-in-air injection was started. Some wells had increases as much as 7 orders of magnitude. Simultaneous with the increase in methanotrophs was a decrease in water and soil gas concentrations of trichloroethylene (TCE) and tetrachloroethane (PCE). Two wells declined in TCE/PCE concentration in the water by more than 90% to below 2 ppb. All of the wells in the affected zone showed significant decreases in contaminants in less than one month. Chloride concentrations in the water were inversely correlated with TCE/PCE concentration. Four of five vadose zone piezometers declined from concentration as high as 10,000 ppm to less than 5 ppm in less than 6 weeks. The fifth cluster also declined by more than 95%. After only three months on injection, a decline in TCE/PCE in the sediment of more than 30% was also observed, with TCE/PCE being undetectable in most sediments at the end of the 14-month test. Gene probes and direct isolation from the water and sediment revealed that the right types of methanotrophs were being stimulated and that isolates could degrade TCE at a high rate.

7464 (WSRC-TR--93-393) **P-Area Acid/Caustic Basin groundwater monitoring report: Second quarter 1993.** Westinghouse Savannah River Co., Aiken, SC (United States). Sep 1993. 60p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE94004441. Source: CSTI; NTIS; GPO Dep.

The six monitoring wells at the P-Area Acid/Caustic Basin are sampled quarterly as part of the Savannah River Site (SRS) Groundwater Monitoring Program and to comply with the terms of a consent decree signed May 26, 1988, by the US District Court (District of South Carolina, Aiken Division). During second quarter 1993, samples from the monitoring wells were analyzed for indicator parameters, groundwater quality parameters, parameters characterizing suitability as a drinking water supply, and other constituents. Monitoring results that exceeded the final Primary Drinking Water Standards (PDWS) or the SRS flagging criteria or turbidity standard are discussed in this report. During second quarter 1993, no constituents exceeded the final PDWS in wells at the P-Area Acid/Caustic Basin. Aluminum exceeded the SRS Flag 2 criterion in wells PAC 1, 3, 4, 5, and 6. Iron and manganese each exceeded the Flag 2 criterion in wells PAC 2, 3, 5, and 6. Lead was elevated above its Flag 2 criterion in well PAC 5, and radium-228 was above its proposed DWS (Flag 2) in wells PAC 3 and 6. Radium-228 results that exceeded nonvolatile beta activities were reported in these and other wells.

7465 (WSRC-TR--93-394) **K-Area/Caustic Basin Groundwater Monitoring Report: Second quarter 1993.** Thompson, C.Y. Westinghouse Savannah River Co., Aiken, SC (United States). Sep 1993. 64p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE94004030. Source: OSTI; NTIS; GPO Dep.

During second quarter 1993, samples from the KAC monitoring wells at the K-Area Acid/Caustic Basin were collected and analyzed for indicator parameters, groundwater quality parameters, parameters indicating suitability as drinking water, and other constituents. Monitoring results that exceeded the final Primary Drinking Water Standards (PDWS) or the Savannah River Site (SRS) flagging criteria or turbidity standard during the quarter are discussed in this report. No analytes exceeded the final PDWS during second quarter 1993. Aluminum exceeded its Flag 2 criterion in wells KAC 6, 7, and 9. Iron exceeded the Flag 2 criterion in wells KAC 6 and 7, and specific conductance exceeded the Flag 2 criterion in well KAC 9. No samples exceeded the SRS turbidity standard.

7466 (WSRC-TR--93-398) **K-Area and Par Pond Sewage Sludge Application Sites groundwater monitoring report: Second quarter 1993.** Westinghouse Savannah River Co., Aiken, SC (United States). Oct 1993. 56p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE94004444. Source: OSTI; NTIS; GPO Dep.

During second quarter 1993, samples from the three monitoring wells at the K-Area site (KSS series) and the three monitoring wells at the Par Pond site (PSS series) were analyzed for constituents required by South Carolina Department of Health and Environmental Control Construction Permit 13,173 and for other constituents as part of the Savannah River Site (SRS) Groundwater Monitoring Program. This report describes monitoring results that exceeded the final Primary Drinking Water Standards (PDWS) or the SRS flagging criteria. During second quarter 1993, no constituents exceeded the final PDWS or any other flagging criteria at the K-Area and Par Pond Sewage Sludge Application Sites. During first quarter 1993, aluminum and iron exceeded the SRS Flag 2 criteria in one or more of the KSS and the PSS wells. These constituents were not analyzed second quarter 1993. In the KSS well series, the field measurement for alkalinity ranged as high as 35 mg/L in well KSS 1D. Alkalinity measurements were zero in the PSS wells, except for a single measurement of 1 mg/L in well PSS 1D. Historical and current water-level elevations at the K-Area Sewage Sludge Application Site indicate that the groundwater flow direction is south to southwest (SRS grid coordinates). The groundwater flow direction at the Par Pond Sewage Sludge Application Site could not be determined second quarter 1993.

7467 (DOE/ER/61054--3) **Simulation of the carbon cycle in the oceans: Annual report, Third year, September 15, 1992--September 14, 1993.** Siegenthaler, U. Bern Univ. (Switzerland). 1993. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-90ER61054. Order Number DE94000780. Source: OSTI; NTIS; GPO Dep.

In this report, the authors conclude that the average oceanic uptake of anthropogenic CO_2, as determined from four different ocean models and normalized to the observed mean penetration depth of bomb^{-1} ^{4}C (analogue to anthropogenic CO_2), is 2.0 $\pm$ 0.5 GtC/yr (decade 1980--1989). This oceanic uptake plus the year-to-year growth of the atmospheric CO_2 content together are less by 1.8 $\pm$ 1.2 GtC/yr than the estimated anthropogenic CO_2 emissions from fossil fuels and land use.

7468 (DOE/ER/61540--1) **Global survey of carbon dioxide in the ocean: Progress report, January 1, 1993--December 31, 1993.** Sabine, C.; Key, R.M.; Sarmiento, J.L. Princeton Univ., NJ (United States). Sep 1993. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-93ER61540. Order Number DE94001787. Source: OSTI; NTIS; GPO Dep.

This proposal was submitted in response to the DOE call for proposals to participate in obtaining carbon system measurements as part of the World Ocean Circulation Experiment/Hydrographic Program (WOCE/HP). The authors' interest in participating in this global survey stemmed from two major research directions in which our their has been actively involved. The first is the DOE supported ocean carbon cycle model development program. The models developed as part of this program clearly demonstrate the importance of ocean carbon measurements in constraining the oceanic sink of anthropogenic carbon dioxide. The creation of a CO_2 measurement program at Princeton allowed the unique ability for a close interaction between the modellers and the people actually making the measurements. This interaction strengthens both programs.

7469 (DOE/EW/50625–T7) **[Environmental Hazards Assessment Program annual report, June 1992–June 1993]: Use of diatom distributions to monitor environmental health.** Levine, R.H. (Wesleyan Univ., Middletown, CT (United States)). Medical Univ. of South Carolina, Charleston, SC (United States). [1993]. 20p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG01-92EW50625. Order Number DE94004506. Source: OSTI; NTIS; INIS; GPO Dep.

A variety of approaches has been used in the past to assess the environmental impact of anthropogenic contaminants. One reliable index for aquatic environments is the analysis of diatom species distribution; the focus in this case being on the Savannah River. The completed objectives of this study were: (A) the development and use of procedures for measuring diatom distribution in the water column and (B) the development and evaluation of sediment sampling methods for retrospective analysis.

7470 (DOE/EW/53023–T3) **Hazardous materials in aquatic environments of the Mississippi River Basin: Quarterly project status report, July 1, 1993–September 30, 1993.** Tulane Univ., New Orleans, LA (United States). [1993]. 23p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG01-93EW53023. Order Number DE94002242. Source: OSTI; NTIS; GPO Dep.

This document is a brief progress report from each of the research and education projects that are currently funded through the ERWM contract. During third quarter 1993, approval was given by DOE for purchase of equipment. Equipment purchases were initiated and much of the equipment has been received and installed. The committees in charge of coordination of sampling and analyses associated with the collaborative research groups continued to meet and address these issues. Sampling has been done in the lower part of Devil's Swamp and in the Devil's Swamp Lake area. In addition, extensive sampling has been done in Bayou Trepagnier and in Bayou St. John. During this period, Tulane and Xavier Universities continued working closely with Oak Ridge National Laboratories (ORNL). The ORNL 1993 summer student internship program was completed. Plans were made for expanding the program to support 8 students next summer. Leonard Price, a Xavier University Chemistry professor and John Walz, a Tulane University Engineering professor each spent 5 weeks at ORNL. During this time these faculty worked with ORNL researchers exploring mutual interests and discussing possible future collaborations. In September, Drs. Carl Gehrs, Lee Shugart and Marshall Adams of ORNL, visited the Tulane and Xavier campuses. They presented two seminars and met with several of the investigators being supported by the ERWM contract. Tulane/Xavier project administrators participated in the Office of Technology Development's "New Technologies and Program Exhibition" in the Rayburn House Office Building on September 23 and in the Hart Senate Office Building on September 27.

7471 (DOE/OR/00033–T566) **Growth, life history, and species interactions of bluegill sunfish (Lepomis macrochirus) under heavy predation.** Belk, M.C. (Georgia Univ., Athens, GA (United States)). Oak Ridge Associated Universities, Inc., TN (United States); Georgia Univ., Athens, GA (United States). 1992. 128p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-76OR00033 ; AC09-76SR00819. Order Number DE94001409. Source: OSTI; NTIS; GPO Dep.

The purpose of this study was, first, to compare growth and life history characteristics of an unfished population of bluegill sunfish (Lepomis macrochirus) in the presence of an abundant predator population to characteristic exhibited by bluegills in typical southeastern US reservoirs where the abundance of predators is reduced, but fishing is increased. The second objective was to determine if differences observed between populations were determined genetically or environmentally.

7472 (DOE/OR/00033–T568) **Effect of snails (Elimia clavaeformis) on phosphorus cycling in stream periphyton and leaf detritus communities.** Jay, E.A. (North Carolina Univ., Chapel Hill, NC (United States)). Oak Ridge Associated Universities, Inc., TN (United States); North Carolina Univ., Chapel Hill, NC (United States). 1993. 79p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-76OR00033. Order Number DE94001411. Source: OSTI; NTIS; GPO Dep.

In this study, the author examined the effect of grazing on phosphorus cycling in stream periphyton and leaf detritus communities using the snail Elimia clavaeformis. Phosphorus cycling fluxes and turnover rates were measured in a laboratory and in a natural stream, respectively, using radioactive tracer techniques.

7473 (ENEA-RT-AMB–92-08) **Finite element model for prediction of circulation in Gulf of La Spezia (Italy): Tide, wind and seiche effects analysis.** Baldi, A. (ENEA, La Spezia (Italy). Centro Ricerche Energia Ambiente Santa Teresa); Marri, P. No corporate text available. Mar 1993. 29p. (In Italian). (RT/AMB–92-08). Order Number DE94727309. Source: OSTI; NTIS (US Sales Only).

This report describes the use of a finite element model for the prediction of circulation in the Gulf of La Spezia. This model is able to simulate the depth average circulation within small scale embayments characterized by irregular boundaries and bottom topography. The forcing terms, here considered are the tide, the wind and a seiche. The simulations describe the different roles of these forcing terms and the results have demonstrated that a seiche with a period of 70 minutes and an amplitude of 3 cm can be an important forcing term for the circulation in the Gulf of La Spezia and for the flushing time of the harbour waters. This seiche can explain the current velocity values measured in the Gulf and determines the flushing time and the water quality of the harbour.

7474 (INIS-GB–521) **Fisheries and the marine environment: policy support and research 1991-92: Report of the director.** Ministry of Agriculture, Fisheries and Food, Lowestoft (United Kingdom). Directorate of Fisheries Research. 1993. 40p. Order Number DE94610484. Source: OSTI; NTIS (US Sales Only); INIS.

This Directorate of Fisheries Report for 1991-2 reviews the work of the Fish Stock Management Division and the Aquatic Environment Protection Division in the fields of control and monitoring of non-radioactive and radioactive waste and of fish and shellfish disease monitoring. (UK).

7475 (INIS-mf–13734, pp. 317-323) **Investigations of the connection between seismicity and ^{222R}n-CO_2 content in spring waters at the Vogtland area (Germany): first results.** Heinicke, J. (Saxon Academy of Sciences, Leipzig (Germany). Research Group Freiberg/Bad Brambach); Koch, U.; Martinelli, G. Ceskoslovenska Akademie Ved, Prague (Czech Republic). Geofyzikalni Ustav. 1993. (CONF-9209428–: 23. general assembly of the European Seismological Commission, Prague (Czech Republic), 7-12 Sep 1992). In *Activity report 1990-1992 and proceedings. Volume II.* 213p. Order Number DE94610481. Source: OSTI; NTIS (US Sales Only); INIS.

The measurements were carried out at the 'Radonquelle' spring water of Bad Brambach (^{222}Rn activity: 25 kBq.l^{-1}). The results of radon measurements over a period of three years show some significant anomalies in radon activity before, during, and after microseismic events in the region. The measuring interval for calculating the daily average value was < 1 hour. The results also show a good correlation between the CO_2 and radon parameters in an interval measured during a seismically quiet period. (Z.S.) 2 tabs., 7 figs., 18 refs.

7476 (IVL-B–1119) **Life cycle assessments and eutrophication: A concept for calculation of the potential effects of nitrogen and phosphorous.** Samuelsson, M.O. Swedish Environmental Research Inst., Stockholm (Sweden). Oct 1993. 15p. Order Number DE94730429. Source: OSTI; NTIS.

The aim with this report was to make an attempt to calculate the potential effect, on aquatic ecosystems, by nitrogen, phosphorus and organic material to be used in life cycle assessment. In addition, to identify lack of knowledge that has to be study for improving the LCA analysis. It is suggested in this report that the amount of nitrogen and phosphorus transported to the aquatic environment are recalculated to the amount organic carbon that nitrogen and phosphorus can mediate. The produced organic carbon is then used to calculate the potential oxygen consumption by the material. This is made by using the reversed photosynthesis

including oxygen consumption by nitrification. By the use of the relationship it is revealed that 1 mol organic carbon consumes 1.3 mol oxygen. The value of COD by the organic material emitted to the aquatic ecosystem can then be added to the calculated oxygen consumption. Examples are given in the report on non-site specific and site specific calculations. 17 refs, 4 figs, 1 tab

7477 (LA-UR–93-1963) **Geomorphology of plutonium in the Northern Rio Grande.** Graf, W.L. (Arizona Univ., Tempe, AZ (United States). Dept., of Geography). Los Alamos National Lab., NM (United States). Mar 1993. 389p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE94003576. Source: OSTI; NTIS; INIS; GPO Dep.

Nearly all of the plutonium in the natural environment of the Northern Rio Grande is associated with soils and sediment, and river processes account for most of the mobility of these materials. A composite regional budget for plutonium based on multi-decadal averages for sediment and plutonium movement shows that 90 percent of the plutonium moving into the system is from atmospheric fallout. The remaining 10 percent is from releases at Los Alamos. Annual variation in plutonium flux and storage exceeds 100 percent. The contribution to the plutonium budget from Los Alamos is associated with relatively coarse sediment which often behaves as bedload in the Rio Grande. Infusion of these materials into the main stream were largest in 1951, 1952, 1957, and 1968. Because of the schedule of delivery of plutonium to Los Alamos for experimentation and weapons manufacturing, the latter two years are probably the most important. Although the Los Alamos contribution to the entire plutonium budget was relatively small, in these four critical years it constituted 71–86 percent of the plutonium in bedload immediately downstream from Otowi.

7478 (LUNBDS-NBKE–92-5002) **Loading of organo chlorines to a water body; Fate within the baltic sea.** Jaernmark, C. Lund Univ. (Sweden). Dept. of Ecology. 1992. 31p. Order Number DE94730411. Source: OSTI; NTIS.

The aim of this paper is to review mechanisms and interactions that determines the transport and fate of organic air pollutants with special focus on the Baltic ecosystem. Following areas are treated: occurrence forms and transportation of the pollutants in the atmosphere; exchange between the atmosphere and the aquatic environment; movement within the aquatic ecosystem; the sediments role as potential sink; and, how these pollutants are taken up by aquatic organisms. 84 refs, 5 figs, 1 tab

7479 (NEI-NO–383, pp. 154-167) **Climatic effects on fresh water: Nutrient loading, eutrophication and acidification.** Hessen, D.O. (Norwegian Inst. for Water Research, Oslo (Norway)); Wright, R.F. Norsk Inst. for Naturforskning, Trondheim (Norway); Direktoratet for Naturforvaltning, Trondheim (Norway). Feb 1993. (CONF-9011339–: Impact of climatic change on natural ecosystems, with emphasis on boreal and arctic/alpine areas, Trondheim (Norway), 27-29 Nov 1990). In *Impacts of climatic change on natural ecosystems with emphasis on boreal and arctic/alpine areas.* 185p. Order Number DE94730364. Source: OSTI; NTIS.

Climatic change will affect the aquatic environment both directly and indirectly through effects within the catchment area. This in turn will affect water quality for the downstream ecosystems; streams, lakes and the coastal marine environment. We have evaluated the potential effects on boreal aquatic ecosystems in Norway based on a future climatic scenario entailing a 2-4°C increase in temperature and a 5-15% increase in precipitation. A temperature increase can lead to increased mineralisation of organic matter stored in soils. This will release nutrients such as nitrogen and phosphorus, and may affect the trophic status of lakes. The expected changes include increased runoff, increased erosion and mineralisation and thus increased phosphorus loading in winter, summer being characterised by lower loadings but an extended growing season. Assessments based on empirical models suggest no major changes or possibly a slightly improved eutrophic status in large, deep, oligo- to mesotrophic lakes. An increase in total annual phosphorus loading combined with an extended growing season may cause adverse effects in more productive lakes, in particular shallow lakes with periodic oxygen depletion. In addition, phosphorus loading to coastal waters may increase owing to increased erosion in low-lying agricultural areas. A future climate with mild winters can result in major changes in seasonal patterns of freshwater quality. The acid pulse, typical of the spring thaw today, can be replaced by frequent acid pulses during the winter or by chronically acid water all winter. 21 refs., 13 figs., 1 tab.

7480 (NUTEK–91-173) **Stensund aquaculture - ecological technique for waste water treatment.** Guterstam, B. (Stensunds Folkhoegskola, Trosa (Sweden)). Swedish National Board for Industrial and Technical Development (NUTEK), Stockholm (Sweden). Sep 1992. 27p. (In Swedish). Order Number DE94730441. Source: OSTI; NTIS.

The aim of this project is to demonstrate a technique for recycling of plant nutrients and extraction of heat from waste waster. The method use constructed food webs for detoxification and decomposition of the wastes, before inclusion in new biomass in plants and animals. The processes takes place in a specially designed greenhouse, for whole year operation in a Nordic climate.

7481 (SAND–93-2616C) **A comparative evaluation of SAR and SLAR.** Mastin, G.A. (Sandia National Labs., Albuquerque, NM (United States)); Manson, J.J.; Bradley, J.D.; Axline, R.M.; Hover, G.L. Sandia National Labs., Albuquerque, NM (United States). [1993]. 11p. Sponsored by Coast Guard, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-940123–1: 2. thematic conference on remote sensing for marine and coastal environments, New Orleans, LA (United States), 31 Jan - 2 feb 1994). Order Number DE94002922. Source: OSTI; NTIS; GPO Dep.

Synthetic aperture radar (SAR) was evaluated as a potential technological improvement over the Coast Guard's existing side-looking airborne radar (SLAR) for oil-spill surveillance applications. The US Coast Guard Research and Development Center (R&D Center), Environmental Branch, sponsored a joint experiment including the US Coast Guard, Sandia National Laboratories, and the Naval Oceanographic and Atmospheric Administration (NOAA), Hazardous Materials Division. Radar imaging missions were flown on six days over the coastal waters off Santa Barbara, CA, where there are constant natural seeps of oil. Both the Coast Guard SLAR and the Sandia National Laboratories SAR were employed to acquire simultaneous images of oil slicks and other natural sea surface features that impact oil-spill interpretation. Surface truth and other environmental data were also recorded during the experiment. The experiment data were processed at Sandia National Laboratories and delivered to the R&D Center on a computer workstation for analysis by experiment participants. Issues such as optimal spatial resolution, single-look vs. multi-look SAR imaging, and the utility of SAR for oil-spill analysis were addressed. Finally, conceptual design requirements for a possible future Coast Guard SAR were outlined and evaluated.

7482 (DOE/BP/35885–3) **Juvenile passage program: A plan for estimating smolt travel time and survival in the Snake and Columbia Rivers.** Skalski, J.R. (Univ. of Washington, Seattle, WA (United States). Center for Quantitative Science); Giorgi, A. Washington Univ., Seattle, WA (United States). Center for Quantitative Science; Chapman (Don) Consultants, Inc., Redmond, WA (United States). Oct 1993. 64p. Sponsored by USDOE, Washington, DC (United States). DOE Contract BI79-87BP35885 ; AI79-91BP16570. Order Number DE94005630. Source: OSTI; NTIS; GPO Dep.

A plan for developing a program to evaluate juvenile salmon passage is presented that encompasses the Snake (Lower Granite to McNary Dams), Mid-Columbia (Wells to McNary Dams), and Lower Columbia (McNary to Bonneville Dams) segments of the Snake/Columbia River system. This plan focuses on the use of PIT-tag technology to routinely estimate travel times and reach survival of outmigrating yearling and subyearling Chinook, sockeye, and steelhead during spring and summer months. The proposed program outlines tagging studies that could be implemented in (a)

1992, (b) near term (1993–94), and (c) long term (1995 to the next decade). The evolution of this program over time parallels plans to establish additional PIT-tag detector and slide-gate systems at Little Goose, Lower Monumental, McNary, John Day, and Bonneville Dams. The eventual ability to concurrently estimate travel time and survival of release groups will permit evaluation of travel time-survival-flow relationships and identify possible mortality "hot spots" for remediation.

7483 (CONF-9309269–1) **The catalytic inactivation of cellulase enzyme components by palladium complexes.** Woodward, J.; Gooch, M.G.; Shultz, M.D. Oak Ridge National Lab., TN (United States). [1993]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400 ; AC02-83CH10093. From Department of Energy/National Renewable Energy Laboratory (DOE/NREL) ethanol project review meeting; Lakewood, CO (United States); 27-29 Sep 1993. Order Number DE94001136. Source: OSTI; NTIS; GPO Dep.

It has been discovered that sodium hexachloropalladate is a strong inhibitor of cellobiohydrolase I (CBH I) from Trichoderma reesei having an I_{50} of <50 μM with p-nitrophenylcellobioside (PNPC) as the substrate. Similar complexes of the metals platinum, osmium, iridium, and rhodium have little effect on CBH I. Other cellulase activities (Avicelase, β-glucanase) are also inhibited by the palladium complex, suggesting that inhibition of two major types of catalytic activity in cellulase are affected. Preliminary data on the kinetics of inhibition of CBH I by sodium hexachloropalladate indicate that the inhibition is reversible and, possibly, uncompetitive. It is anticipated that sodium hexachloropalladate and other palladium complexes will be useful for determining the effect of the binding of catalytically inactivated CBH I and other cellulase components on the structure of cellulose fibers.

7484 (LBL–34897) **The application of psoralens to the study of DNA structure, function and dynamics.** Spielmann, P.H. (Univ. of California, Berkeley, CA (United States). Dept. of Chemistry). Lawrence Berkeley Lab., CA (United States). Apr 1991. 202p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE94005204. Source: OSTI; NTIS; GPO Dep.

A series of six nitroxide spin-labeled psoralens were designed, synthesized and tested as probes for DNA dynamics. The synthesis of these spin-labeled psoralen derivatives and their photoreactivity with double-stranded DNA fragments is described. The spin labels (nitroxides) were demonstrated to survive the uv irradiation required to bind the probe to the target DNA. EPR spectra of the photobound spin-labels indicate that they do not wobble with respect to the DNA on the time-scales investigated. The author has used psoralen modified DNA as a model for the study of DNA repair enzyme systems in human cell free extracts. He has shown that damage-induced DNA synthesis is associated with removal of psoralen adducts and therefore is "repair synthesis" and not an aberrant DNA synthesis reaction potentiated by deformation of the DNA by adducts. He has found that all DNA synthesis induced by psoralen monoadducts is the consequence of removal of these adducts. By the same approach he has obtained evidence that this in vitro system is capable of removing psoralen cross-links as well. Reported here are synthetic methods that make use of high intensity lasers coupled with HPLC purification to make homogeneous and very pure micromole quantities of furan-side monoadducted, cross-linked, and pyrone-side monoadducted DNA oligonucleotide. These molecules are currently being studied by NMR and X-ray crystallography. The application of the site-specifically psoralen modified oligonucleotide synthesized by these methods to the construction of substrates for the investigation of DNA repair is also discussed.

7485 (LBL–34903) **Structures and related properties of helical, disulfide-stabilized peptides.** Pagel, M.D. (Univ. of California, Berkeley, CA (United States). Dept. of Chemistry). Lawrence Berkeley Lab., CA (United States). Nov 1993. 206p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE94005210. Source: OSTI; NTIS; GPO Dep.

The three dimensional structure of several peptides were determined by NMR spectroscopy and distance geometry calculations. Each peptide formed a predictable, rigid structure, consisting of an α-helix, a "scaffold" region which packed along one face of the helix, and two disulfide bridges which covalently connect the helix and scaffold regions. The peptide Apa-M5 was designed to constrain the M5 peptide from MLCK in a helical geometry using the apamin disulfide scaffold. This scaffold constrains the N- terminal end of the helix with two disulfide bridges and a reverse turn. Like the M5 peptide, Apa-M5 was found to bind calmodulin in a Ca^{2+}-dependent 1:1 stoichiometry. However, the dissociation constant of the (Apa-M5)-calmodulin complex, 107 nM, was 100-fold higher than the dissociation constant of the M5-calmodulin complex. This difference was due to a putative steric overlap between the Apa-M5 scaffold and calmodulin. The peptide Apa-Cro was designed to replace the large structural protein matrix of λ Cro with the apamin disulfide scaffold. However, Apa-Cro did not bind the consensus DNA operator half-site of λ Cro, probably due to a steric overlap between the Apa-Cro disulfide framework and the DNA. The amino acid sequence of the scaffold-disulfide bridge arrangement of the peptide Max was derived from the core sequence of scyllatoxin, which contains an α-helix constrained at the C-terminal end by two disulfide bridges and a two-stranded βsheet scaffold. Max was shown to fold with >84% yield to form a predictable, stable structure that is similar to scyllatoxin. The folding and stability properties of Max make this scaffold and disulfide bridge arrangement an ideal candidate for the development of hybrid sequence peptides. The dynamics of a fraying C-terminal end of the helix of the peptide Apa-AlaN was determined by analysis of ^{15}N NMR relaxation properties.

7486 (UCRL-JC–113838) **Accelerator mass spectrometry in biomedical research.** Vogel, J.S.; Turteltaub, K.W. Lawrence Livermore National Lab., CA (United States). 20 Oct 1993. 24p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-930960–4: 6. international conference on accelerator mass spectrometry, Canberra (Australia), 17 Sep - 1 oct 1993). Order Number DE94004336. Source: OSTI; NTIS; INIS; GPO Dep.

Biological effects occur in natural systems at chemical concentrations of parts per billion ($1:10^9$) or less. Affected biomolecules may be separable in only milligram or microgram quantities. Quantification at attomole sensitivity is needed to study these interactions. AMS measures isotope concentrations to parts per 10^{13}--^{15} on milligram-sized samples and is ideal for quantifying long-lived radioisotopic labels that are commonly used to trace biochemical pathways in natural systems. ^{14}C-AMS has now been coupled to a variety of organic separation and definition technologies. The primary research investigates pharmacokinetics and genotoxicities of toxins and drugs at very low doses. Human subject research using AMS includes nutrition, toxicity and elemental balance studies. ^{3}H, ^{41}Ca and ^{26}Al are also traced by AMS for fundamental biochemical kinetic research. Expansion of biomedical AMS awaits further development of biochemical and accelerator technologies designed specifically for these applications.

7487 (UCRL-JC–115381) **^{14}C-AMS quantification of biomolecular interactions using microbore and plate separations.** Creek, M.R.; Frantz, C.E.; Fultz, E.; Haack, K.; Redwine, K.; Shen, N.; Turteltaub, K.W.; Vogel, J.S. Lawrence Livermore National Lab., CA (United States). 20 Oct 1993. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-930960–5: 6. international conference on accelerator mass spectrometry, Canberra (Australia), 17 Sep - 1 oct 1993). Order Number DE94004335. Source: OSTI; NTIS; GPO Dep.

AMS sensitivity arises from the direct counting of radioisotopes without interference from molecular isobars. No chemical or physical information other than a bulk isotope ratio is available from the usual AMS instrument. Chemical or biological significance of the isotope ratio depends on the definition of the sample prior to conversion to material used in the ion source. The authors use AMS to

quantify biochemical interactions between labeled xenobiotics and their potential targets of toxicity. These potential target molecules are separated and defined by various types of plate and microbore separations, including thin layer chromatography (TLC), high performance liquid chromatography (HPLC) and gel electrophoresis (GE) in quantifying the binding of ^{14}C-labeled compounds to specific DNA and protein fragments. They discuss their methods of using these microbore and plate separations of biomolecules while controlling contamination from ^{14}C in laboratory equipment and give examples.

7488 (DOE/ER/61256–T2) **Role of X-ray-induced transcripts in adaptive responses following X-rays: Progress report – year 2.** Boothman, D.A. Michigan Univ., Ann Arbor, MI (United States). [1993]. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER61256. Order Number DE94005412. Source: OSTI; NTIS; GPO Dep.

The overall goal of this proposal is to clone low dose X-ray-induced genes via molecular biology cloning techniques. From previous data, certain human cells can clearly carry out adaptive survival responses (ASRs) following ionizing radiation. Research goals are to better understand how some human cells can establish ASRs, and why other cells fail to do so. The author has been successful at identifying several genes whose expressions are altered during the establishment of, and actual processes occurring in, the adaptive response of U1-Mel cells. He will, in the next year or so, investigate the kinetics of expression of these genes, and whether or not other environmental stresses affect the expressions of these genes via Northern blot analyses. Finally, he will begin to investigate the function(s) of these genes within the cell, either under normal conditions of growth or following X-irradiation, using antisense expression technologies. Antisense RNA analyses and DNA repair endpoints (i.e., survival recovery, alkaline/neutral filter elutions, and PFGE) will be combined to examine the effects of specific gene "knock out" experiments on ASRs in those human cells which demonstrate this response. The authors is constructing mammalian expression vectors containing cyclin A, cyclin B, p53, or xip5, and xip12 (when full-length cDNAs are available) in the "sense" orientation to overexpress these genes in human cells which did not demonstrate ASRs, such as HTB-152 or a variety of other human fibroblasts. Since many of the xips identified by 2-D gel electrophoresis were cell cycle regulated, the factors turning them on or off within a normal cell cycle may be clearly related to the events occurring in human cells following a genetic insult.

7489 (LA-UR–93-4107) **Genetic algorithms for minimal source reconstructions.** Lewis, P.S.; Mosher, J.C. Los Alamos National Lab., NM (United States). [1993]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9311135–1: Institute of Electrical and Electronic Engineers (IEEE) asilomar conference on signals, systems, and computers, Pacific Grove, CA (United States), 1-3 Nov 1993). Order Number DE94003940. Source: OSTI; NTIS; GPO Dep.

Under-determined linear inverse problems arise in applications in which signals must be estimated from insufficient data. In these problems the number of potentially active sources is greater than the number of observations. In many situations, it is desirable to find a minimal source solution. This can be accomplished by minimizing a cost function that accounts from both the compatibility of the solution with the observations and for its "sparseness". Minimizing functions of this form can be a difficult optimization problem. Genetic algorithms are a relatively new and robust approach to the solution of difficult optimization problems, providing a global framework that is not dependent on local continuity or on explicit starting values. In this paper, the authors describe the use of genetic algorithms to find minimal source solutions, using as an example a simulation inspired by the reconstruction of neural currents in the human brain from magnetoencephalographic (MEG) measurements.

7490 (LA-UR–93-4210) **Collaborative computing for gene mapping.** Gatewood, J.M. Los Alamos National Lab., NM (United States). [1993]. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9308192–1: Real time applications of high performance computation for biological imaging, Urbana, IL (United States), Aug 1993). Order Number DE94003932. Source: OSTI; NTIS; GPO Dep.

The authors are investigating mechanisms for utilizing advances in high performance computing and alignment algorithm development which will allow the analysis of newly acquired sequence data in real time and eliminate the global alignments problems associated with existing datasets. The presence of repetitive DNA sequences in the human genome complicates the process of homology comparisons. Three approaches have been used to address this problem. Two of the approaches involve elimination of the repetitive elements either by removing the repetitive element from the query or scoring words due to the repetitive elements poorly or not at all during the alignment process. The approach involves identification of the repetitive element in the query by comparison to a known repeat set prior to comparison to the large database. Any homologies returned which are contained within a previously identified repeat are ignored unless the homology exceeds set quality parameters. The homologies which extend outside the bounds of the repetitive element are reported. Using this approach the repeat is not eliminated from larger homologous units which may exist, and is returned as part of the overall homology result. The method the authors utilize in the laboratory for gene mapping is fluorescent in situ hybridization (FISH). This approach involves labelling a gene segment with a fluorescent molecule and then mixing the labeled gene segment (probe) with chromosomes.

7491 (BNL–49587) **A storage ring based inverse Compton scattering angiography source?.** Blum, E.B. Brookhaven National Lab., Upton, NY (United States). Sep 1993. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. Order Number DE94003085. Source: OSTI; NTIS; GPO Dep.

Producing the 33.17 keV photons required for coronary angiography with synchrotron radiation requires a combination of a high energy storage ring with an extremely high field wiggler. Such a source may be too big and expensive to be installed in even the largest medical center. Something other than synchrotron radiation may be needed for a practical source. Inverse Compton scattering has been used in the LEGS experiment at NSLS and elsewhere to produce high energy photons. In this process, a head on collision between a low energy photon and a high energy electron transfers energy to the photon which is then emitted in approximately the direction of the incoming electron. For a given electron energy, more higher energy photons can be produced by this method than by synchrotron radiation. This suggests that inverse Compton scattering can possibly be used for a low cost angiography source. The prospects for such a source will be examined in this paper. Unfortunately, the results will show that although it is easy to obtain the required photon energy, an extremely complicated source will be needed to produce the required number of photons.

7492 (DOE/EW/50625–T3) **[Environmental Hazards Assessment Program annual report, June 1992–June 1993]: Results of the environmental health activities and needs assessment of the South Carolina statewide family practice system for the Environmental Hazards Assessment Program: EHAP Volume 1, No. 1.** Musham, C.; Hainer, B. Medical Univ. of South Carolina, Charleston, SC (United States). 1 May 1993. 24p. Sponsored by USDOE, Washington, DC (United States). DOE

Contract FG01-92EW50625. Order Number DE94004510. Source: OSTI; NTIS; INIS; GPO Dep.

An activities and needs assessment was conducted to determine what each of the seven family practice residency programs in South Carolina is providing in environmental health education. In addition, this study was designed to determine: what are the barriers to greater emphasis on environmental health in family practice residency programs and, what the basic environmental health educational goals for family practice residency programs should be.

7493 (GSI–93-23) **Experimental radiotherapy unit to be established at GSI in Darmstadt.** Kraft, G. (comp.); Gademann, G. (comp.). Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany); Heidelberg Univ., Mannheim (Germany). Inst. fuer Klinische Radiologie; Deutsches Krebsforschungszentrum, Heidelberg (Germany). May 1993. 94p. (In German). Order Number DE94734094. Source: OSTI; NTIS (US Sales Only); INIS.

The Radiologische Universitaetsklinik, Heidelberg, the Gesellschaft fuer Schwerionenforschung, GSI, Darmstadt, and the Deutsches Krebsforschungszentrum (DKFZ), Heidelberg, have filed an application for a joint project intended to study the feasibility and methodology of an enhancement of radiotherapy by way of application of heavy ions and novel irradiation techniques. The experimental radiotherapy unit is to be installed at the heavy ion synchrotron of GSI. It is planned to have about 70 patients a year taking part in the clinical study extending over a period of five years. The results obtained shall be analysed to answer the following questions: - Is the technique developed suitable for clinical routine? - Are the improved dose distributions obtained with the charged particles more effective for local tumor healing than the radiation applied for conventional radiotherapy? - Can an additional clinical effect be attributed to the high-LET properties of the heavy charged particles? - Do the results indicate novel applications of the high-precision radiotherapy using heavy ions? The project is also intended to yield baseline data for defining the concept and technical conditions of heavy-ion radiotherapy as a clinical routine method and therefore also encompasses a design study for a heavy-ion accelerator exclusively for clinical applications. (orig./MG)

Source: OSTI; NTIS (US Sales Only); INIS.

Physical, radiobiological, clinical aspects of neutron capture therapy (NCT) were considered. Problems of planning and optimization of NCT courses were discussed. Data of nature of radiation pathomorphosis, radiation injuries of healthy tissues were presented. Problems of acute radiation sickness caused by neutron radiation were regarded.

7495 (LBL–34512-Summ.) **An optimal constrained linear inverse method for magnetic source imaging.** Hughett, P. (Lawrence Berkeley Lab., CA (United States)). Lawrence Berkeley Lab., CA (United States). Nov 1993. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-9311114–4: Institute of Electrical and Electronic Engineers (IEEE) medical imaging conference, San Francisco, CA (United States), 4-6 Nov 1993). Order Number DE94004014. Source: OSTI; NTIS; GPO Dep.

The optimal constrained linear inverse method (OCLIM) is a new algorithm for magnetic source imaging that approximates an unknown continuous current distribution as a weighted sum of current sources in fixed positions, uses prior information about the expected source power density and measurement noise, and can be efficiently computed. It achieves the minimum possible mean square reconstruction error for any linear estimator and provides statistical confidence limits on the reconstructed source amplitudes. The minimum-norm least squares and weighted pseudoinverse methods are included as special cases. However, OCLIM can produce reconstruction artifacts if the true current distribution is inconsistent with the assumed priors.

An anonymous polymerase chain reaction (PCR) primer set and an internal probe were developed that are specific for Pseudomonas sp. strain B13, a 3-chlorobenzoate-metabolizing strain. Using this primer set and probe, we were able to detect Pseudomonas sp. strain B13 DNA sequences in DNA extracted from aquifer samples fourteen and a half months after Pseudomonas sp. strain B13 had been injected into a sand and gravel aquifer on Cape Cod. This primer-set and probe was also used to analyze isolates from 3-chlorobenzoate enrichments of the aquifer samples by Southern blot analysis. Hybridization of Southern blots with the Pseudomonas sp. strain B13-specific probe and a catabolic probe in conjunction with restriction fragment length polymorphism (RFLP) analysis of ribosome genes were used determine that viable Pseudomanas sp. strain B13 persisted in this environment. We also isolated a new 3-chlorobenzoate-degrading strain from one of these enrichment cultures. The B-13 specific probe does not hybridize to DNA from this isolate. The new strain could be are indigenous 3-chlorobenzoate degrader or result from gene exchange between Pseudomonas sp. strain B13 and an indigenous bacterium. The later interpretation is supported by an RFLP pattern of ribosome genes that differs from that of Pseudomonas sp. strain B13, identically sized restriction fragments hybridizing to the catabolic gene probe for the B13 chlorobenzoate pathway, and the absence of any enrichable 3-chlorobenzoate degrading strains in the aquifer prior to inoculation.

7497 (NREL/CP–200-5768-Vol.1, pp. 309-313) **Carbon and nitrogen distribution in oak-hickory forests distributed along a productivity gradient.** Reber, R.T. (Purdue Univ., West Lafayette, IN (United States)); Kaczmarek, D.J.; Pope, P.E.; Rodkey, K.S. National Renewable Energy Lab., Golden, CO (United States). [1993]. (CONF-9308106–Vol.1: 1. biomass conference of the Americas: energy, environment, agriculture, and industry, Burlington, VT (United States), 30 Aug - 2 sep 1993). In *First Biomass Conference of the Americas: Energy, environment, agriculture, and industry: Proceedings, Volume 1.* 796p. Order Number DE93010050. Source: OSTI; NTIS; GPO Dep.

Biomass, carbon and nitrogen pools were determined for oak-hickory forests of varying productivity. Little information of this type is available for the central hardwood region. Six oak-hickory dominated forests were chosen to represent a range in potential site productivity as influenced by soil type, amount of recyclable nutrients and available water. Biomass, carbon and nitrogen storage were determined for the following components: above ground standing biomass, fine root biomass, forest floor organic layers and litterfall. As site sequestered at each site was dependent more on the amount of living biomass at each site Litterfall, to some extent, increased with increasing site productivity. As potential site productivity decreased, total fine root biomass increased. The data suggest that as site quality decreased fine root production and turnover may become as important in nutrient cycling as annual litterfall.

Previous work has shown that HeLa cells stably transfected with an HIV-LTR-CAT construct are induced to express chloramphenicol acetyl transferase (CAT) following exposure to DNA-damaging agents such as ultraviolet radiation, γ rays, neutrons, and others. In this report, the authors demonstrate that this induction of HIV-LTR transcription occurs when stably transfected HeLa cells are exposed to agents which mediate cell killing, such as UV radiation, electroporation of sucrose buffer, prolonged heating, and low and high pH. Cells cultured following UV exposure demonstrated a peak in CAT expression that is evidence in viable (but not necessarily cell division-competent) cells 24 h after exposure; this inductive response continued until at least 72 h after exposure. HIV-LTR induction was dose-dependent, and the amount of CAT transcription induced was correlated with the amount of cell killing that occurred in the culture. Other agents which caused no cell killing (such as heat-shock for up to 2 h, treatment with metronidazole, exposure to sunlight, vitamin C treatment, and others) had no effect on HIV-LTR induction. These results suggest that HIV transcription is induced as a consequence of the turn on of a cellular death or apoptotic pathway.

(ENEA, Bologna (Italy). Area Energia Ambiente e Salute). No corporate text available. Apr 1993. 104p. (RT/AMB–92-12). Order Number DE94727343. Source: OSTI; NTIS (US Sales Only).

The present work is the first part of a series of Technical Reports, summarizing the various analyses carried out using Monte Carlo computational methods for the characterization of reference photon radiation fields for the calibration of personal dosemeters. For this purpose the tissue equivalent ICRU (International Commission on Radiation Units) sphere was adopted as a suitable phantom. In this first Report, which will be followed by other three Reports, a complete analysis of Backscatter Factors and their angular dependence have been carried out for five X-ray reference series as stated by the ISO (International Standards Organization) e B. I. P. M. (Bureau International de Poids et Measurements), besides Cesium and Cobalt. The results so obtained have been compared with values computed in similar conditions at other European Institutions, with satisfactory agreement. The work has been carried out under the CEC contract n 160347 and connected to the activities of EURADOS WG-4 (Computational Dosimetry).

7502 (Juel–2729) **Measuring program of the Federal Republic of Germany: External radiation exposure in the Republics of Russia and White Russia during the summer of 1992 calculated for individuals from the Briansk and Gomel regions.** Uray, I.; Hille, R. Forschungszentrum Juelich GmbH (Germany). Abt. Sicherheit und Strahlenschutz. Feb 1993. 164p. (In German). Order Number DE94734008. Source: OSTI; NTIS (US Sales Only); INIS.

The determinations of external radiation exposure basically had two aims, which were to inform the population about the external radioactive burden at the time of measurement and to provide as accurate data as possible for the various dose reconstruction procedures. The measurements were therefore carried out in different regions at systematically chosen places with widely varying contamination levels that ranged from zero to very high values. The programme yielded results for small villages and places of a more urban character alike. Each dosimeter was handed over together with a questionnaire designed to obtain some information on the social factors surrounding its bearer. (orig.)

7503 (KAERI/AR–357/92) **Laser applications for atmospheric remote sensing.** Shin, Jang Soo (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Lee, Sang Mock; Kim, Cheol Jung. One of the most important thing to solve the environmental pollution problems are to establish a measurement technique to detect the kind and the type of pollution timely, quantitatively and qualitatively with accuracy and precision. The conventional measurement techniques such as wet analysis methods and spectrophotometric methods are generally time-consuming and require many manpowers, so it is apt to induce relatively higher errors in analytical processes. The application of laser for environmental remote sensing is the most powerful candidate to overcome the abovementioned drawbacks of the conventional methods. In this report, we propose the possibility of laser application for environmental sensing. (Author).

7504 (LA–12538-MS) **Multisphere neutron spectroscopy measurements at the Los Alamos National Laboratory Plutonium Facility.** Harvey, W.F. (Los Alamos National Lab., NM (United States)); Hajnal, F. Los Alamos National Lab., NM (United States). Jun 1993. 21p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE94003509. Source: OSTI; NTIS; INIS; GPO Dep.

Multisphere neutron spectroscopy methods are applied to measure representative working fields within the Los Alamos National Laboratory (LANL) Plutonium Facility. This facility hosts dynamic processes, which include the fabrication of ^{238}Pu heat sources for radioisotope generators used to power space equipment and a variety of plutonium research programs that involve recovery, hydrofluorination, and metal production. Neutron fluence per unit lethargy, as a function of neutron energy measured for locations throughout this facility, are described. Dosimeter/remmeter response functions [e.g., determined for a 22.8-cm-diameter neutron rem detector (NRD), an Anderson/Braun-type neutron "Snoopy" monitor, track-etch CR-39, BDI-100 bubble detectors, and Kodak type A nuclear track emulsion film, (NTA)] are folded into these spectra to calculate absolute response values of counts, tracks, or bubbles per unit-dose equivalent. The relative response values per unit- dose equivalent for bare and albedo ^{6}LiF-based thermoluminescent dosimeters (TLDs) are also calculated to estimate response scenarios encountered with use of the LANL-TLD. These

results are further compared to more conventional methods of estimating neutron spectral energies such as the "9-to-3 ratio" method.

7505 (NUREG–0713-Vol.14) **Occupational radiation exposure at commercial nuclear power reactors and other facilities 1992: Twenty-fifth annual report, Volume 14.** Raddatz, C.T. (US Nuclear Regulatory Commission, Washington, DC (United States). Division of Regulatory Applications); Hagemeyer, D. Nuclear Regulatory Commission, Washington, DC (United States). Div. of Regulatory Applications. Dec 1993. 295p. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). Source: OSTI; NTIS; INIS; GPO.

This report summarizes the occupational radiation exposure information that has been reported to the NRC's Radiation Exposure Information Reporting System (REIRS) by nuclear power facilities and certain other categories of NRC licensees during the years 1969 through 1992. The bulk of the data presented in the report was obtained from annual radiation exposure reports submitted in accordance with the requirements of 10CFR20.407 and the technical specifications of nuclear power plants. Data on workers terminating their employment at certain NRC licensed facilities were obtained from reports submitted pursuant to 10CFR20.408. The 1992 annual reports submitted by about 364 licensees indicated that approximately 204,365 individuals were monitored, 183,927 of whom were monitored by nuclear power facilities. They incurred an average individual dose of 0.16 rem (cSv) and an average measurable dose of about 0.30 (cSv). Termination radiation exposure reports were analyzed to reveal that about 74,566 individuals completed their employment with one or more of the 364 covered licensees during 1992. Some 71,846 of these individuals terminated from power reactor facilities, and about 9,724 of them were considered to be transient workers who received an average dose of 0.50 rem (cSv).

7506 (PNWD–2200-HEDR) **Final report on the meteorological database, December 1944–1949: Hanford Environmental Dose Reconstruction Project.** Stage, S.A.; Ramsdell, J.V. Jr.; Simonen, C.A.; Burk, K.W.; Berg, L.K. Pacific Northwest Lab., Richland, WA (United States). Nov 1993. 124p. Sponsored by Department of Health and Human Services, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE94002952. Source: OSTI; NTIS; INIS; GPO Dep.

The Hanford Environmental Dose Reconstruction (HEDR) Project is estimating radiation doses that individuals may have received from operations at Hanford from 1944 to the present. A number of computer programs are being developed by the HEDR Project to estimate doses and confidence ranges associated with radionuclides transported through the atmosphere and the Columbia River. One computer program is the Regional Atmospheric Transport Code for Hanford Emissions Tracking (RATCHET). RATCHET combines release data with information on atmospheric conditions including wind direction and speed. The RATCHET program uses these data to produce estimates of time-integrated air concentrations and surface contamination. These estimates are used in calculating dose by the Dynamic EStimates of Concentrations And Radionuclides in Terrestrial EnvironmentS (DESCARTES) and the Calculations of Individual Doses from Environmental Radionuclides (CIDER) computer programs. This report describes the final status of the meteorological database used by RATCHET. Data collection procedures and the preparation and control of the meteorological database are described, along with an assessment of the data quality.

7507 (RFP–4747) **Qualitative safety analysis of proposed material relocation options.** Cathey, N.G.; Foppe, T.L. EG and G Rocky Flats, Inc., Golden, CO (United States). [1993]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC34-90RF62349. (CONF-940312–26: 2. Probabilistic safety assessment and management conference (PSAM), San Diego, CA (United States), 20-24 Mar 1994). Order Number DE94001391. Source: OSTI; NTIS; INIS; GPO Dep.

This paper presents the methodology used to perform a qualitative safety analysis of various options proposed for the relocation of Special Nuclear Material from its present locations to other areas of the Rocky Flats Plant. This analysis determined the relative risk ranking of various proposed relocation options considering the probability and consequences of accidents associated with the material handling, transportation, and storage locations. Of of the five options, two grouping of results were concluded to be significantly different, allowing the decision makers to balance risk issues with their other requirements (e.g., security, schedule, etc.).

7508 (UCRL-JC–115068) **Practical aspects of shielding high-energy particle accelerators.** Thomas, R.H. (Lawrence Livermore National Lab., CA (United States)). Lawrence Livermore National Lab., CA (United States). Sep 1993. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9310242–2: 18. annual conference of the Australian Radiation Protection Society, Sydney (Australia), 7 Oct 1993). Order Number DE94004199. Source: OSTI; NTIS; INIS; GPO Dep.

The experimental basis of shielding design for high-energy accelerators that has been established over the past thirty years is described. Particular emphasis is given to the design of large accelerators constructed underground. The first data obtained from cosmic-ray physics were supplemented by basic nuclear physics. When these data proved insufficient, experiments were carried out and interpreted by several empirical formulae – the most successful of which has been the Moyer Model. This empirical model has been used successfully to design the shields of most synchrotrons currently in operation, and is still being used in preliminary design and to check the results of neutron transport calculations. Accurate shield designs are needed to reduce external radiation levels during accelerator operations and to minimize environmental impacts such as "skyshine" and the production of radioactivity in groundwater. Examples of the cost of minimizing such environmental impacts are given.

7509 (UCRL-JC–115071) **Accelerators in our past, present, and future: A challenge to radiological protection in the twenty-first century.** Thomas, R.H. (Lawrence Livermore National Lab., CA (United States)). Lawrence Livermore National Lab., CA (United States). Sep 1993. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9310242–1: 18. annual conference of the Australian Radiation Protection Society, Sydney (Australia), 7 Oct 1993). Order Number DE94004198. Source: OSTI; NTIS; GPO Dep.

The foundations of many of the subdisciplines of radiological protection laid in accelerator laboratories began with the invention of accelerators. This paper suggests that the discipline of accelerator radiological protection has played and will continue play a more significant part in our lives than is generally recognized. A brief review of some existing uses of accelerators by society is given, and a few probable future uses are described. These future applications will result in the exposure of accelerator (or "mixed") radiation fields to an increased population. Consequently, what are perceived to be the rather specialized concerns of today's accelerator health physicists will – by necessity – become of general interest to all health physicists.

7510 (Y/DQ–49/R1) **Internal dosimetry performing dose assessments via bioassay measurements.** Bailey, K.M. Oak Ridge Y-12 Plant, TN (United States). 11 May 1993. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OS21400. Order Number DE94003331. Source: OSTI; NTIS; INIS; GPO Dep.

The Internal Dosimetry Department at the Y-12 Plant maintains a state-of-the-art bioassay program managed under the guidance and regulations of the Department of Energy. The two major bioassay techniques currently used at Y-12 are the in vitro (urinalysis) and in vivo (lung counting) programs. Fecal analysis (as part of the in vitro program) is another alternative; however, since both urine and fecal analysis provide essentially the same capabilities for detecting exposures to uranium, the urinalysis is the main choice primarily for aesthetic reasons. The bioassay frequency is based on meeting NCRP 87 objectives which are to monitor the accumulation of radioactive material in exposed individuals, and to ensure that significant depositions are detected.

Sponsored by USDOE, Washington, DC (United States). DOE Contract FG01-92EW50625. Order Number DE94004493. Source: OSTI; NTIS; GPO Dep.

The objectives of the EHAP program stated in the proposal to DOE are to: (1) develop a holistic, national basis for risk assessment, risk management, and risk communication which recognizes the direct impact of environmental hazards on the health and well-being of all, (2) develop a pool of talented scientists and experts in cleanup activities, especially in human health aspects, and (3) identify needs and develop programs addressing the critical shortage of well-educated, highly-skilled technical and scientific personnel to address the health oriented aspects of environmental restoration and waste management.

7512 (NREL/CP–200-5768-Vol.2, pp. 1326-1331) **Biodegradable lignin/polyolefin composite films.** Kosikova, B. (Slovak Academy of Sciences, Bratislava (Slovakia)); Demjanova, V.; Mikulasova, M.; Lora, J.H. National Renewable Energy Lab., Golden, CO (United States). [1993]. (CONF-9308106–Vol.2: 1. biomass conference of the Americas: energy, environment, agriculture, and industry, Burlington, VT (United States), 30 Aug - 2 sep 1993). In *First Biomass Conference of the Americas: Energy, environment, agriculture, and industry: Proceedings, Volume 2.* 711p. Order Number DE94000435. Source: OSTI; NTIS; GPO Dep.

From the view point of environmental protection, the plastic wastes, especially from packing materials, represent a potential waste problem. Various approaches were examined to develop partially or completely biodegradable plastics. New type of partially biodegradable polyolefins was prepared by blending of polypropylene with lignin, which was recovered in the ALCELL process, an organosolv pulping process that uses ethanol-water as the delignifying agent. Films of blends with up to 10% wt ALCELL lignin, prepared in absence of commercial stabilizers, had acceptable mechanical strengths. The effect of iignin on biodegradability of the composite films was examined by comparison of behaviour of both pure and lignin containing films during treatment with fungus Phanerochaete chrysosporium. It was found that this fungus is able to grow and to produce lignolytic enzymes in the presence of the films containing lignin. Biodegradation of lignin in the composite film was confirmed by the releasing of lignin fragments into the extracellular fluid. Because of measurement of mechanical properties offers a mean of direct estimation of polymer degradation, the degree of biodegradation of the films tested was followed by monitoring of elongation at break. The changes of break at elongation in the course of enzymatic treatment revealed that the lignin/PP composite films are potentially environmentally nonpersisting. The micrographs of the lignin containing films obtained by scanning electron microscopy show the significant changes of the film surface upon degradation with Phanerochaete chrysosporium in contrast to unchanged lignin free film.

7513 (UCRL-ID–115334) **Initial ultraviolet-B intensity data at Lawrence Livermore National Laboratory.** Patten, K.O. Jr. (Lawrence Livermore National Lab., CA (United States)); Wuebbles, D.J.; Smith, G.J. Lawrence Livermore National Lab., CA (United States). Oct 1993. 25p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE94004279. Source: OSTI; NTIS; GPO Dep.

A measurement of UV-B reaching the ground has been established at the Lawrence Livermore National Laboratory. The instrument is the same as those operated by the National Institute for Water and Atmospheric Research in their network in New Zealand. The wavelength response of the radiometer is similar to the response of human skin to UV-B. Intensity data are collected by averaging meter readings over 10 minutes from 6:00 am to 6:00 pm Pacific Standard Time, then converting to effective UV-B intensity normalized at 310 nm. This report checks the intensities obtained at LLNL from November 1992 to July 1993 against the expected results: Increased solar zenith angle, whether from the daily cycle or from the yearly cycle in solar position, should decrease UV-B intensity at the ground due to increased optical path; and, intervening cloud cover should decrease ground UV-B intensity. Three additional findings are reported here: Maximum UV-B intensity on cloudless days does not always follow a smooth curve, but instead varies either high or low to some extent; Morning UV-B intensities are less than those in the afternoon at comparable solar zenith angles at certain times of year; LLNL wintertime daily-averaged UV-B intensities are somewhat higher than those observed at Auckland, New Zealand in their winter of 1992.

[1993]. 6p. Sponsored by Texas Univ., Austin, TX (United States). DOE Contract W-7405-ENG-36. (CONF-940223–1: Vision science and its applications, Santa Fe, NM (United States), 11-15 Feb 1994). Order Number DE94000900. Source: OSTI; NTIS; GPO Dep.

the clinical diagnosis of a lesion often requires that a histological analysis be made of a physical specimen of the suspect tissue. In the present work, the authors have utilized an optical biopsy system (OBS) developed at Los Alamos National Laboratory which is safe for patient use and provides a large amount of optical data from the sampled tissue. An earlier version of this system has been used to study age-related changes in the ocular lens (10). The purpose of the present study is to establish the potential clinical utility of the OBS by determining if characteristic features in the optical signatures, obtained from a variety of ophthalmic lesions, are correlated with the histological features of tissue biopsies obtained from these patients.

The Department of Energy supports research in the geosciences in order to provide a sound foundation of fundamental knowledge in those areas of the geosciences that are germane to the DOE's many missions. The Geosciences Research Program is supported by the Office of Energy Research. The participants in this program include DOE laboratories, academic institutions, and other governmental agencies. These activities are formalized by a contract or grant between the DOE and the organization performing the work, providing funds for salaries, equipment, research materials, and overhead. The summaries in this document, prepared by the investigators, describe the scope of the individual programs. The Geosciences Research Program includes research in geophysics, geochemistry, resource evaluation, solar-terrestrial interactions, and their subdivisions including earth dynamics, properties of earth materials, rock mechanics, underground imaging, rock-fluid interactions, continental scientific drilling, geochemical transport, solar-atmospheric physics, and modeling, with emphasis on the interdisciplinary areas.

7516 (DOE/ER/14079–29) **Efficient modeling in transversely isotropic inhomogeneous media.** Alkhalifah, T. Colorado School of Mines, Golden, CO (United States). Center for Wave Phenomena. Nov 1993. 35p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-89ER14079. (CWP–129P). Order Number DE94003394. Source: OSTI; NTIS; GPO Dep.

An efficient modeling technique for transversely isotropic, inhomogeneous media, is developed using a mix of analytical equations and numerical calculations. The analytic equation for the raypath in a factorized transversely isotropic (FTI) media with linear velocity variation, derived by Shearer and Chapman, is used to trace between two points. In addition, I derive an analytical equation for geometrical spreading in FTI media that aids in preserving program efficiency; however, the traveltime is calculated numerically. I then generalize the method to treat general transversely isotropic (TI) media that are not factorized anisotropic inhomogeneous by perturbing the FTI traveltimes, following the perturbation ideas of Cerveny and Filho. A Kirchhoff-summation-based program relying on Trorey's (1970) diffraction method is used to generate synthetic seismograms for such a medium. For the type of velocity models treated, the program is much more efficient than finite-difference and general ray-trace modeling techniques.

7517 (DOE/ER/14113–3) **Hyperfiltration-induced fractionation of lithium isotopes in geologic systems: Progress report, April 1, 1992–June 30, 1993.** Fritz, S.J. Purdue Univ., Lafayette, IN (United States). Dept. of Earth and Atmospheric Sciences. Jun 1993. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-90ER14113. Order Number DE94003520. Source: OSTI; NTIS; GPO Dep.

The purpose of this research was to show whether hyperfiltration is an efficient mechanism to fractionate lithium isotopes. This paper reports results of experiments in which freeze-dried, LiCl-saturated bentonite is sedimented onto a chemically inert filter paper fitted to a porous plug. The filter is connected to a syringe pump capable of delivering solution at a precisely controlled flow rate. Deionized water is forced through the membrane to determine its hydraulic conductivity. The deionized water is then changed to 9.411 mN LiCl solution. The $^{7}Li/^{6}Li$ ratio is measured for the input solution as well as the effluent. The concentration profile for ^{6}Li and ^{7}Li can then be computed. These experiments have shown lithium isotope fractionation by hyperfiltration through geologic materials.

7518 (LA-UR–93-3951) **SPECTRUM analysis of multi-spectral imagery in conjunction with wavelet/KLT data compression.** Bradley, J.N.; Brislawn, C.M. Los Alamos National Lab., NM (United States). [1993]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9311135–2: Institute of Electrical and Electronic Engineers (IEEE) asilomar conference on signals, systems, and computers, Pacific Grove, CA (United States), 1-3 Nov 1993). Order Number DE94003961. Source: OSTI; NTIS; GPO Dep.

The data analysis program, SPECTRUM, is used for fusion, visualization, and classification of multi-spectral imagery. The raw data used in this study is Landsat Thematic Mapper (TM) 7-channel imagery, with 8 bits of dynamic range per channel. To facilitate data transmission and storage, a compression algorithm is proposed based on spatial wavelet transform coding and KLT decomposition of interchannel spectral vectors, followed by adaptive optimal multiband scalar quantization. The performance of SPECTRUM clustering and visualization is evaluated on compressed multispectral data. 8-bit visualizations of 56-bit data show little visible distortion at 50:1 compression and graceful degradation at higher compression ratios. Two TM images were processed in this experiment: a 1024 x 1024-pixel scene of the region surrounding the Chernobyl power plant, taken a few months before the reactor malfunction, and a 2048 x 2048 image of Moscow and surrounding countryside.

7519 (LA-UR–93-4265) **MUSIC for localization of thunderstorm cells.** Mosher, J.C. (Los Alamos National Lab., NM (United States)); Lewis, P.S.; Rynne, T.M. Los Alamos National Lab., NM (United States). [1993]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9311135–4: Institute of Electrical and Electronic Engineers (IEEE) asilomar conference on signals, systems, and computers, Pacific Grove, CA (United States), 1-3 Nov 1993). Order Number DE94004985. Source: OSTI; NTIS; GPO Dep.

Lightning represents an event detectable optically, electrically, and acoustically, and several systems are already in place to monitor such activity. Unfortunately, such detection of lightning can occur too late, since operations need to be protected in advance of the first lightning strike. Additionally, the bolt itself can traverse several kilometers before striking the ground, leaving a large region of uncertainty as to the center of the storm and its possible strike regions. NASA Kennedy Space Center has in place an array of electric field mills that monitor the (effectively) DC electric field. Prior to the first lightning strike, the surface electric fields rise as the storm generator within a thundercloud begins charging. Extending methods we developed for an analogous source localization problem in mangnetoencephalography, we present Cramer-Rao lower bounds and MUSIC scans for fitting a point-charge source model to the electric field mill data. Such techniques can allow for the identification and localization of charge centers in cloud structures.

7520 (LBL–30751) **Development and verification of a numerical technique for coupled hydromechanical phenomena in rocks.** Noorishad, J.; Tsang, C.F. Lawrence Berkeley Lab., CA (United States). Jun 1990. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-900640–8: International conference on rock joints, Loen (Norway), 4-6 Jun 1990). Order Number DE94004006. Source: OSTI; NTIS; GPO Dep.

Analysis of hydromechanical behavior of fractured rocks requires the use of a numerical method, such as the ROCMAS code developed at LBL (Noorishad et al, 1982). A new numerical technique composed of an incremental recasting of the finite element matrix formulation of the hydroelasticity algorithms, coupled with a modified Newton-Raphson linearization scheme, is developed for such analysis. The resulting code, which was named ROCMAS II, was partially verified using existing solutions in the literature. Complete verification was obtained by cross comparison of the performance of ROCMAS II versus that of its predecessor, the ROCMAS code, since the solution techniques of these two codes are completely different. The verified ROCMAS II with its major improvements, such as an incremental set-up, the strain-softening and dilating shear, and hyperbolic normal closure joint model, and the new linearization scheme, allows more realistic simulations of a host of rock mechanic problems in saturated rocks. Furthermore, the ROCMAS II set-up provides a proper basis upon which procedures for general treatment of various kinds of material non-linearity can be built.

7521 (UCRL-ID–115322) **Simulation of the Indian and East-Asian summer monsoon in the ECMWF model: Sensitivity to horizontal resolution.** Sperber, K.R. (Lawrence Livermore National Lab., CA (United States)); Potter, G.L.; Boyle, J.S.; Hameed, S. Lawrence Livermore National Lab., CA (United States). Nov 1993. 37p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (PCMDI–12). Order Number DE94004276. Source: OSTI; NTIS; GPO Dep.

The ability of the ECMWF model (Cycle 33) to simulate the Indian and East Asian summer monsoon is evaluated at four different horizontal resolutions: T21, T42, T63, and T106. Generally, with respect to the large scale features of the circulation, the largest differences among the simulations occur at T42 relative to T21. However, on regional scales, important differences among the high frequency temporal variabilitY serve as a further critical test of the model's ability to simulate the monsoon. More generally, the results indicate the importance of evaluating high frequency time scales as a component of the climate system. T106 best captures both the spatial and temporal characteristics of the Indian and East Asian Monsoon, while T42 fails to correctly simulate the sequence and development of synoptic scale milestones that characterize the monsoon flow. In particular, T106 is superior at simulating the development and migration of the monsoon trough over the Bay of Bengal. In the T42 simulation, the development of the monsoon occurs one month earlier than typically observed. At this time the trough is incorrectly located adjacent to the east coast of India which results in an underestimate of precipitation over the Burma/

Thailand region. This early establishment of the monsoon trough affects the evolution of the East-Asian monsoon and yields excessive preseason rainfall over the Mei-yu region. EOF analysis of precipitation over China indicates that T106 best simulates the Mei-yu mode of variability associated with an oscillation of the rainband that gives rise to periods of enhanced rainfall over the Yangize River Valley. The coarse resolution of T21 precludes simulation of the aforementioned regional scale monsoon flows.

7522 (UCRL-ID–115335) **Numerical procedure for planetary wave solution.** Choi, Woo Kap; Wuebbles, D.J. Lawrence Livermore National Lab., CA (United States). Sep 1993. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE94004280. Source: OSTI; NTIS; INIS; GPO Dep.

The newly-developed LLNL two-dimensional chemical-radiative-transport model requires a knowledge of the EP flux divergence as an input momentum forcing. The major contributions for this forcing term come from the synoptic wave in the troposphere, the planetary wave in the stratosphere and mesosphere and the gravity wave in the upper mesosphere. The major source of the zonal momentum forcing in the middle atmosphere is the nonlinear planetary wave breaking. This planetary wave breaking also plays a significant role of mixing the chemical tracers. Garcia suggested a way of parameterizing the planetary wave breaking by using, linear damping of the primary wave. In this note we describe the procedure of obtaining the wave solution for the parameterization.

7523 (UCRL-JC–112788) **The effect of elevation data representation on nocturnal drainage wind simulations.** Walker, H.; Leone, J.M. Jr. Lawrence Livermore National Lab., CA (United States). Aug 1993. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9309230–3: 2. international workshop in integrating geographic information systems and environmental modeling, Breckenridge, CO (United States), 27-29 Sep 1993). Order Number DE94003624. Source: OSTI; NTIS; GPO Dep.

A critical requirement for accurately representing surface-atmosphere interactions within an atmospheric model is to realistically characterize the land surface. Data must be extracted from a geographical database and transformed so that it is consistent with the needs of the numerical model. In such a process, there are two major classes of error that must be understood and minimized whenever possible. The first class involves the accuracy, precision, and resolution of the geographical data itself. The second is error introduced by the transformations used to assimilate the data into the atmospheric model. Thus, this research has two coupled objectives: to understand the effects of errors within the geographical data base upon the accuracy of the atmospheric model simulation and to design optimal techniques for the transformation of the data. Such transformations are often constrained by the conflicting needs of representing physically important spatial and temporal scales while eliminating scales that cannot be resolved by the a model.

66 PHYSICS

7524 (DOE/FTR–93018043) **Travel to the first congress of the Institute of Physics with topics including the vacuum, plasma, spectroscopy, and physics in medicine topical groups: Foreign trip report, April 17–23, 1993.** Dylla, H.F. Southeastern Universities Research Association, Inc., Newport News, VA (United States). Continuous Electron Beam Accelerator Facility. 19 Jul 1993. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84ER40150. Order Number DE93018043. Source: OSTI; NTIS (US Sales Only); GPO Dep.

This meeting was the first congress offered by the Institute of Physics (IOP) that combined symposia organized by several topical groups of the IOP, including the vacuum, plasma, spectroscopy, and physics in medicine topical groups. Approximately 300 physicists attended the congress. The traveler was invited by the IOP Vacuum Group to present an invited talk on "The Modeling and Measurement of Water Outgassing from Metal Surfaces." In addition, the traveler was invited by the President of IOP, Dr. Clive Foxell, to represent the American Vacuum Society (as current AVS President) at several ceremonial functions during the congress.

7525 (BONN-HE–93-13) **Low-temperature expansions and correlation functions of the Z_3-chiral Potts model.** Han, N.S.; Honecker, A. Bonn Univ. (Germany). Physikalisches Inst. Apr 1993. 17p. (HEP-TH–9304083). Order Number DE94734005. Source: OSTI; NTIS (US Sales Only); INIS.

Using perturbative methods we derive new results for the spectrum and correlation functions of the general Z_3-chiral Potts quantum chain in the massive low-temperature phase. Explicit calculations of the ground state energy and the first excitations in the zero momentum sector give excellent approximations and confirm the general statement that the spectrum in the low-temperature phase of general Z_n-spin quantum chains is identical to one in the high-temperature phase where the role of charge and boundary conditions are interchanged. Using a perturbative expansion of the ground state for the Z_3 model we are able to gain some insight in correlation functions. We argue that they might be oscillating and give estimates for the oscillation length as well as the correlation length. (orig.)

7526 (BUDKERINP–91-74) **Collective dynamics of unstable quantum states.** Sokolov, V.V.; Zelevinskij, V.G. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1991. 47p. (IYaF–91-74.). Order Number DE94611072. Source: OSTI; NTIS (US Sales Only); INIS.

Dynamics of a complicated quantum system interacting with open decay channels is treated by means of the discretized effective non-Hermitian Hamiltonian. The main subject is segregation of collective short-lived resonances, which are similar to the coherent Dicke states in optics. The analysis is carried out with use of two complementary representations (internal and doorway). The phase transition between regimes of weak and strong continuum coupling is considered. 32 refs.

7527 (BUDKERINP–91-98) **Level density of random matrices for decaying systems.** Haake, F.; Izrailev, F.; Saher, D.; Sommers, H.-J. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1991. 10p. (IYaF–91-98.). Order Number DE94611073. Source: OSTI; NTIS (US Sales Only); INIS.

Analytical and numerical results for the level density of a certain class of random non-Hermitian matrices $H=H+i\Gamma$ are presented. The conservative part H belongs to the Gaussian orthogonal ensemble while the damping piece Γ is quadratic in Gaussian random numbers and may describe the decay of resonances through various channels. In the limit of a large matrix dimension the level density assumes a surprisingly simple dependence on the relative strength of the damping and the number of channels. 18 refs.; 4 figs.

7528 (BUDKERINP–92-1) **The 2+1-dimensional integrable generalization of the sine-Gordon equation: Dressing method and initial value problem.** Konopel'chenko, B.G.; Dubrovskij, V.G. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1992. 53p. (IYaF–92-1.). Order Number DE94611074. Source: OSTI; NTIS (US Sales Only); INIS.

The 2+1-dimensional integrable generalization of the sine-Gordon equation symmetric in the spatial variables is studied by the inverse spectral transform method. The solutions with functional parameters, plane solitons (kinks) and plane breathers are constructed by the dressing method. The initial value problem for this equation with the constant boundaries is solved in both cases $\sigma^2=\pm 1$. 21 refs.

7529 (IC–93/233) **Coherent states versus De Broglie-Wavelets.** Barut, A.O. International Centre for Theoretical Physics, Trieste (Italy). Aug 1993. 7p. Order Number DE94611075. Source: OSTI; NTIS (US Sales Only); INIS.

There are two types of nonspreading localized wave forms representing a stable, individual, indivisible, single quantum particle with interference properties endowed with classical (hidden) parameters, i.e. initial positions and velocity: coherent states and

wavelets. The first is exactly known for oscillator, the second for free particles. Their relation and their construction is discussed from a new unified point of view. We then extend this contraction to the Coulomb problem, where with the introduction of a new time variable T, nonspreading states are obtained. (author). 10 refs.

7530 (JINR-D–2-92-552) **Ives-Stilwell experiment and relativistic length.** Strel'tsov, V.N. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of High Energy. 1992. 10p. (In Russian). Order Number DE94611076. Source: OSTI; NTIS (US Sales Only); INIS.

The radar formulation of the relativistic theory operates with light or retarded distances and relativistic or radar length introduced on their basis. In spite of this the aberration of light should be considered as the first manifestation of the light distance. 24 refs.; 2 figs.

7531 (JINR-E–2-92-359) **On calculation of evolution operator kernel of Schroedinger equation.** Slobodenyuk, V.A. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1992. 15p. Order Number DE94611077. Source: OSTI; NTIS (US Sales Only); INIS.

The method for calculation of the evolution operator kernel as an expansion in powers of the time interval δt is proposed. 17 refs.

7532 (JINR-R–4-92-496) **To the qualitative theory of the multichannel quantum systems.** Zakhar'ev, B.N. (Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics); Chabanov, V.M.; Nekhamkin, V.M. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1992. 12p. (In Russian). Order Number DE94611078. Source: OSTI; NTIS (US Sales Only); INIS.

It is clarified that the elementary constituents of the multichannel formalism are: the algorithms of the spectral management of the wave motion along the continuous x (spatial) and discrete a (numbering the channels) co-ordinates. The perturbations which change the partial reduced widths of bound states are considered as well. 14 refs.; 2 figs.

7533 (KAERI/TR–367/93) **Magnetic field effect on selective photoionization.** Lee, Jong Min (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Yoo, Byung Duk; Lee, Young Joo; Cha, Hyung Ki; Choe, Ang Sung; Rho, Si Pyo; Baik, Dae Hyun; Song, Kyu Seok; Yi, Jong Hoon; Jeong, Do Young; Jeong, Eui Chang; Han, Jae Min; Yang, KKorea Atomic Energy Research Inst., Daeduk (Korea, Republic of). Jul 1993. 49p. (In Korean). Order Number DE94611079. Source: OSTI; NTIS (US Sales Only); INIS.

The magnetic field effects on selective photoionization of the atoms of Lanthanides have been examined in a point of view of the enhancement of the efficiency of selective photoionization. The Zeeman shifts and the hyperfine structures have been calculated by the formulae approximated by LS coupling, and the electronic orbitals by the Hartree-Slater equation. The dependence of the energy levels on the magnetic field has been informed. The photoionization rate due to the polarized lights in a magnetic field has been evaluated. The variation of selection rules of the photoionization due to polarized lights, also, has been informed. (Author).

7534 (KFKI–1993-07/B) **Kerr-Schild metrics revisited. Pt. 1: The ground state.** Gergely, L.A.; Perjes, Z. Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. 20p. Order Number DE94611080. Source: OSTI; NTIS (US Sales Only); INIS.

The particular way Kerr-Schild metrics incorporate a congruence of null curves in space-time is a sure source of fascination. The Kerr-Schild pencil of metrics $g_{ab}+\Delta l_a l_b$ is investigated in the generic case when it maps an arbitrary vacuum space-time with metric g_{ab} to a vacuum space-time. The theorem is proved that this generic case does not contain the shear-free subclass as a smooth limit. It is shown that one of the Kota-Perjes metrics is a solution in the shearing class. (R.P.) 15 refs.

7535 (KFKI–1993-09/B) **Kerr-Schild metrics revisited. Pt. 2: The homogeneous integrals.** Gergely, L.A.; Perjes, Z. Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. 21p. Order Number DE94611081. Source: OSTI; NTIS (US Sales Only); INIS.

The vacuum-vacuum Kerr-Schild pencil of metrics $g_{ab}+Vl_a l_b$ in the generic case in an anharmonic dynamical system governed by two constrained sets ψ_1 and ψ_2 of first-order linear differential equations. The ψ_1 system is homogeneous, and provides the source terms for the ψ_2 system nonlinearly. The general solution of the homogeneous equations is obtained. (R.P.) 6 refs.; 3 tabs.

7536 (LA-UR–93-4316) **(j,0) ⊕ (0,j) representation space: Majorana-like construct.** Ahluwalia, D.V.; Goldman, T.; Johnson, M.B. Los Alamos National Lab., NM (United States). [1993]. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9309304–1: 17. International School of Theoretical Physics meeting on standard model and beyond, Krakow (Poland), Sep 1993). Order Number DE94005010. Source: OSTI; NTIS; INIS; GPO Dep.

This is second of the two invited lectures presented at the "XVII International School of Theoretical Physics: Standard Model and Beyond' 93." The text is essentially based on a recent publication by the present authors. Here, after briefly reviewing the (j, 0) ⊕ (0, j) Dirac-like construct in the front form, we present a detailed construction of the (j, 0) ⊕ (0, j) Majorana-like fields.

6612 Techniques of General Use in Physics

7537 **Particle beam generator using a radioactive source.** Underwood, D.G. To Dept. of Energy. 1991. U.S. patent application 7-798,782. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE94005172. Source: OSTI; NTIS; INIS; GPO Dep.

The apparatus of the present invention selects from particles emitted by a radioactive source those particles having momentum within a desired range and focuses the selected particles in a beam having at least one narrow cross-dimension, and at the same time attenuates potentially disruptive gamma rays and low energy particles. Two major components of the present invention are an achromatic bending and focusing system, which includes sector magnets and quadrupole, and a quadrupole doublet final focus system. Permanent magnets utilized in the apparatus are constructed of a ceramic (ferrite) material which is inexpensive and easily machined.

This final technical report represents the results of the research in nonlinear optics (optical phase conjugation) obtained by five (5) predoctoral students in the department of physics at Alabama Agricultural and Mechanical University (AAMU).

7539 (FNAL/C–93/346) **Sloan Digital Sky Survey.** Kent, S.M. Fermi National Accelerator Lab., Batavia, IL (United States). Nov 1993. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-9309298–1: Science with infrared surveys conference, Les Houches (France), 21-24 Sep 1993). Order Number DE94004662. Source: OSTI; NTIS; INIS; GPO Dep.

The Solan Digital Sky Survey is a project which will produce a detailed digital phometric map of half the northern sky to about 23 magnitude using a special purpose wide field telescope of 2.5 meter aperture. This map will be used to select about a million galaxies and 100,000 quasars, for which high resolution spectra will be obtained using the same telescope. A catalog will be produced of all the detected objects, about 100 million galaxies and a similar number of stars, and a million quasar candidates.

7540 (IC–93/252) **Magnetoresistance of films and strips with the diffuse surface scattering.** Aronov, A.G. International

Centre for Theoretical Physics, Trieste (Italy). Aug 1993. 13p. Order Number DE94611100. Source: OSTI; NTIS (US Sales Only); INIS.

Magnetoresistance of films in a parallel magnetic field and strips in a perpendicular field is considered. The temperature and magnetic field dependencies of magnetoconductance depend on the time evolution of the correlator of phases. This correlator has different behavior as the function of time: the ergodic behavior at small magnetic fields is changed on the nonergodic one at large magnetic fields in spite of the diffusion electron motion due to a diffuse scattering on boundaries. This leads to unusual temperature and magnetic field dependencies of magnetoresistance. The ergodic hypothesis is not applicable to mesoscopical fluctuations at such a large quasiclassical field. (author). 6 refs, 5 figs.

7541 (IC–93/267) **Intensity of waves diffracted from symmetrical profile lamellar gratings.** Chakrabarti, S. (International Centre for Theoretical Physics, Trieste (Italy)); Chakravorty, J.N. International Centre for Theoretical Physics, Trieste (Italy). Aug 1993. 15p. Order Number DE94611101. Source: OSTI; NTIS (US Sales Only); INIS.

We derive the expression for the intensity of the diffracted waves from a symmetrical profile lamellar grading (SLG). Such symmetrical structure may improve the performance of an ordinary lamellar grating. If suitably designed, its applicability may be extended to the millimeter to radio wave regions apart from the normal optical and near infrared region in which it is mostly used. Such millimeter wave SLG can have significant application in astronomy and astrophysics. By proper choice of geometrical parameters, an SLG may be used as a microwave antenna in space communication as well. (author). 24 refs, 5 figs.

7542 (IC–93/268) **Some theorems on a class of harmonic manifolds.** Rahman, M.S.; Chen Weihuan. International Centre for Theoretical Physics, Trieste (Italy). Aug 1993. 9p. Order Number DE94611102. Source: OSTI; NTIS (US Sales Only); INIS.

A class of harmonic n-manifold, denoted by HM_n, is, in fact, focussed on a Riemannian manifold with harmonic curvature. A variety of results, with properties, on HM_n is presented in a fair order. Harmonic manifolds are then touched upon manifolds with recurrent Ricci curvature, biRicci-recurrent curvature and recurrent conformal curvature, and, in consequence, a sequence of theorems are deduced. (author). 21 refs.

7543 (IC–93/269) **A theoretical study of ordering phenomena in K-In and K-Sb molten alloys.** Akinlade, O.; Badirkhan, Z. International Centre for Theoretical Physics, Trieste (Italy). Aug 1993. 18p. Order Number DE94611103. Source: OSTI; NTIS (US Sales Only); INIS.

The quasilattice approximation (QLA) has been used to study ordering phenomena in K-In and K-Sb alloys. The concentration-concentration fluctuations in the long wavelength limit $S_{cc}(0)$, the Watten-Cowley short range order parameter α_1 and the chemical diffusion D have been computed. Our calculations yield for both alloys, qualitative agreement with experiment in the transition from a compound forming/phase separating (CF/PS) state observed in K-In to strong compound formation in the case of K-Sb. Most importantly, we obtain the calculated quantities for the whole concentration range, thus complementing the available experimental evidence. Based on the present work and our previous calculations for K-Te, we predict that from an ordering point of view and within the same framework of the QLA, K-Sn for which experimental results are not available would have a lower free energy of mixing and expectedly a stronger tendency for compound formation than that observed in K-Pb. (author). 19 refs, 7 figs, 1 tab.

7544 (IC–93/276) **Identity for propagator in four-fermion theory.** Karnaukhov, S. International Centre for Theoretical Physics, Trieste (Italy). Aug 1993. 4p. Order Number DE94611104. Source: OSTI; NTIS (US Sales Only); INIS.

The method of exact evaluation of quantum partition function (QPF) in some four fermion models is proposed. The calculations are carried out by the path integral method. The integral is evaluated by introducing the additional fields (called Hubbard-Stratanovich transformation in some models), integration over fermionic variables, and considering the finite-dimensional approximation of the rest integral over bosonic fields in the infinite limit. The non-standard representation of propagator is proposed for the Fermi-theory of four-fermion interaction. This representation seems to be more convenient for the nonperturbative analysis. (author). 7 refs.

7545 (KFKI–1993-10/G) **Effect of detector size and position on measured vibration spectra of strings and rods.** Lipcsei, S. (Atomic Energy Research Inst., Budapest (Hungary). Dept. of Applied Reactor Physics); Kiss, S.; Por, G. Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. 17p. Order Number DE94611105. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Progress in Nuclear Energy.

Weight functions of string and rod vibrations are described by standing and travelling wave models. The effects of detector size and position on the measured vibration spectra was investigated, and the main characteristics of the transfer function were calculated by a simple standing wave model. The theoretical results were compared with data from laboratory rod vibration experiments, and with pressure fluctuation spectra obtained at the Paks Nuclear Power Plant. In addition, some fundamental physical consequences can be made using the theory of superposition of travelling waves and their reflection on clamped rod ends. (R.P.) 5 refs.; 10 figs.

7546 (LA–12644-M) **TIPC user manual.** Kelley, T.A.; Roussel-Dupre, R.A.; Symbalisty, E.M.D.; Clodius, W.B. Los Alamos National Lab., NM (United States). Nov 1993. 52p. Sponsored by Department of Defense, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE94004470. Source: OSTI; NTIS; GPO Dep.

The Translonospheric Propagation Code (TIPC) computer program executes tasks related to the detection of vhf and uhf signals following propagation through the ionosphere. These tasks include: transionospheric propagation, signal detection, signal processing, delta time of arrival study, delta time of arrival uncertainty study, and signal reconstruction. The parameters needed to accomplish each task are defined and the process of using TIPC in each of these tasks is explained step-by-step. TIPC is also capable of saving these parameter values defined for the specific task. In addition, subroutine descriptions are identified.

7547 (LAMP–93/3) **Three-photon micromasers.** Lamp Series Report (Laser, Atomic and Molecular Physics), Lamp Series Report (Laser, Atomic and Molecular Physics). Obada, A.S.F. (International Centre for Theoretical Physics, Trieste (Italy)); Abu Sitta, A.M.M.; Yasin, O.M. International Centre for Theoretical Physics, Trieste (Italy). Aug 1993. 8p. Order Number DE94611106. Source: OSTI; NTIS (US Sales Only); INIS.

A non-degenerate 3-photon micromaser is analyzed. A 4-level atom is taken and 3 models of the field are considered. The model is solved for the case of resonance and the master equation for the density matrix is obtained. Semi-analytical solutions are obtained under specified approximations. Three modes can exist depending on the time of interaction. (author). 10 refs, 2 figs.

7548 (LA-UR–93-4173) **The status of the solar neutrino problem.** Bowles, T.J. Los Alamos National Lab., NM (United States). [1993]. 17p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9305309–1: 16. meeting on elementary particle physics, Kazimierz (Poland), 24-28 May 1993). Order Number DE94003934. Source: OSTI; NTIS; INIS; GPO Dep.

Perhaps the most outstanding discrepancy between prediction and measurements in current particle physics comes from the solar neutrino problem, in which a large deficit of high-energy solar neutrinos is observed. Many Nonstandard Solar Models have been invoked to try to reduce the predicted flux, but all have run into problems in trying to reproduce other measured parameters (e.g., the luminosity) of the Sun. Other explanations involving new physics such as neutrino decay and neutrino oscillations, etc. have also been proffered. Again, most of these explanations have been ruled out by either laboratory or astrophysical measurements. It appears that perhaps the most likely particle physics solution is that of matter enhanced neutrino oscillation, the Mikheyev-Smirnov-Wolfenstein (MSW) oscillations. Two new radiochemical gallium experiments, which have a low enough threshold to be sensitive to

the dominant flux of low-energy p-p neutrinos, now also report a deficit and also favor a particle physics solution. The next generation of solar experiments promise to finally resolve the source of the "solar neutrino problem" by the end of this decade.

7549 (LA-UR–93-4185) **A space-based classification system for RF transients.** Moore, K.R. (Los Alamos National Lab., NM (United States)); Call, D.; Johnson, S.; Payne, T.; Ford, W.; Spencer, K.; Wilkerson, J.F.; Baumgart, C. Los Alamos National Lab., NM (United States). [1993]. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9309289–1: International workshop on artificial intelligence applications in solar-terrestrial physics, Lund (Sweden), 22-24 Sep 1993). Order Number DE94003933. Source: OSTI; NTIS; INIS; GPO Dep.

The FORTE (Fast On-Orbit Recording of Transient Events) small satellite is scheduled for launch in mid 1995. The mission is to measure and classify VHF (30–300 MHz) electromagnetic pulses, primarily due to lightning, within a high noise environment dominated by continuous wave carriers such as TV and FM stations. The FORTE Event Classifier will use specialized hardware to implement signal processing and neural network algorithms that perform onboard classification of RF transients and carriers. Lightning events will also be characterized with optical data telemetered to the ground. A primary mission science goal is to develop a comprehensive understanding of the correlation between the optical flash and the VHF emissions from lightning. By combining FORTE measurements with ground measurements and/or active transmitters, other science issues can be addressed. Examples include the correlation of global precipitation rates with lightning flash rates and location, the effects of large scale structures within the ionosphere (such as traveling ionospheric disturbances and horizontal gradients in the total electron content) on the propagation of broad bandwidth RF signals, and various areas of lightning physics. Event classification is a key feature of the FORTE mission. Neural networks are promising candidates for this application. The authors describe the proposed FORTE Event Classifier flight system, which consists of a commercially available digital signal processing board and a custom board, and discuss work on signal processing and neural network algorithms.

7550 (LA-UR–93-4262) **Acceleration in astrophysics.** Colgate, S.A. Los Alamos National Lab., NM (United States). [1993]. 21p. Sponsored by National Aeronautics and Space Administration, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9308206–1: International workshop on acceleration and radiation generation in space and laboratory plasmas, Kardmall (Greece), 10 Aug - 4 sep 1993). Order Number DE94004986. Source: OSTI; NTIS; INIS; GPO Dep.

The origin of cosmic rays and applicable laboratory experiments are discussed. Some of the problems of shock acceleration for the production of cosmic rays are discussed in the context of astrophysical conditions. These are: The presumed unique explanation of the power law spectrum is shown instead to be a universal property of all lossy accelerators; the extraordinary isotropy of cosmic rays and the limited diffusion distances implied by supernova induced shock acceleration requires a more frequent and space-filling source than supernovae; the near perfect adiabaticity of strong hydromagnetic turbulence necessary for reflecting the accelerated particles each doubling in energy roughly 10^5 to ^{6} scatterings with negligible energy loss seems most unlikely; the evidence for acceleration due to quasi-parallel heliosphere shocks is weak. There is small evidence for the expected strong hydromagnetic turbulence, and instead, only a small number of particles accelerate after only a few shock traversals; the acceleration of electrons in the same collisionless shock that accelerates ions is difficult to reconcile with the theoretical picture of strong hydromagnetic turbulence that reflects the ions. The hydromagnetic turbulence will appear adiabatic to the electrons at their much higher Larmor frequency and so the electrons should not be scattered incoherently as they must be for acceleration. Therefore the electrons must be accelerated by a different mechanism. This is unsatisfactory, because wherever electrons are accelerated these sites, observed in radio emission, may accelerate ions more favorably. The acceleration is coherent provided the reconnection is coherent, in which case the total flux, as for example of collimated radio sources, predicts single charge accelerated energies much greater than observed.

7551 (LA-UR–93-4279) **BATSE burst location accuracy and constraints on the fraction of repeating GRB sources.** Strohmayer, T.E. (Los Alamos National Lab., NM (United States)); Fenimore, E.E.; Miralles, J.A. Los Alamos National Lab., NM (United States). [1993]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9310252–2: BATSE gamma-ray burst workshop, Huntsville, AL (United States), 21-23 Oct 1993). Order Number DE94004981. Source: OSTI; NTIS; GPO Dep.

We use a one parameter model for GRB source repetition to investigate the ability of BATSE to detect source repetition and to place constraints on the fraction of repeating sources. From Monte Carlo simulations we find that the current uncertainty in BATSE burst locations severely limits our ability to confidently detect source repetition from distributions containing fewer than 10 – 15% repeaters. A fit of our repetition model to 260 BATSE catalog bursts yields a best-fit repeating fraction of f_r = 21% with a 90% confidence region ranging from 5.5 to 32.5%. By modifying the size of the measurement errors in our simulations we show that the location and width of the confidence region depends sensitively on the burst location errors. With BATSEs present location accuracy analysis of larger samples of bursts will not appreciably improve the constraint on the repeating fraction.

7552 (LA-UR–93-4313) **DMSP satellites as gamma-ray burst detectors.** Terrell, J. (Los Alamos National Lab., NM (United States)); Lee, P.; Klebesadel, R.W.; Griffee, J.W. Los Alamos National Lab., NM (United States). [1993]. 6p. Sponsored by USDOE, Washington, DC (United States);National Aeronautics and Space Administration, Washington, DC (United States);Department of Defense, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9310252–1: BATSE gamma-ray burst workshop, Huntsville, AL (United States), 21-23 Oct 1993). Order Number DE94004977. Source: OSTI; NTIS; GPO Dep.

Gamma-ray burst detectors are aboard three US Air Force Defense Meteorological Satellite Program (DMSP) spacecraft, in orbit at 800 km altitude, with corresponding fields of view to 117° from the zenith. A large number of bursts have been detected by DMSP, usually confirming and supplementing data from GRO and other spacecraft. The location of a gamma-ray burst source detected by several DMSP spacecraft is considerably restricted by knowledge of the several fields of view. Often non-detection of a strong burst by one or more DMSP spacecraft is even more informative in narrowing the possible area of the burst. The DMSP data in conjunction with observations by other spacecraft can lead to reasonable positional information when more accurate positions are not available from GRO or other data.

7553 (LA-UR–93-4340) **Gamma-ray bursts from the accretion of solid bodies onto high-velocity Galactic neutron stars.** Colgate, S.A.; Leonard, P.J.T. Los Alamos National Lab., NM (United States). [1993]. 6p. Sponsored by Department of Defense, Washington, DC (United States);National Aeronautics and Space Administration, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9310252–4: BATSE gamma-ray burst workshop, Huntsville, AL (United States), 21-23 Oct 1993). Order Number DE94005006. Source: OSTI; NTIS; GPO Dep.

We propose a simple model for the gamma-ray bursts based on high- velocity Galactic neutron stars that have accretion disks. The latter are formed from a mixture of material from the supernova shell and that ablated from a pre-supernova binary companion. Accretion onto the neutron star from this disk when the disk is still largely gaseous may result in a soft gamma-ray repeater phase. Much later, after the neutron star has moved away from its birthplace, solid bodies form in the disk, and some are perturbed into hitting the neutron star to create gamma-ray bursts. This model makes several predictions that are consistent with the observations. The observed combination of a high degree of isotropy on the sky coupled with the observed value of $< V/V_{max} >$ is not, at first glance, predicted, but is not impossible to attain in our model.

7554 (LA-UR–93-4397) **Production rates of terrestrial in-situ-produced cosmogenic nuclides.** Reedy, R.C. (Los Alamos

National Lab., NM (United States)); Tuniz, C.; Fink, D. Los Alamos National Lab., NM (United States). [1993]. 7p. Sponsored by National Aeronautics and Space Administration, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-930960–7: 6. international conference on accelerator mass spectrometry, Canberra (Australia), 17 Sep - 1 oct 1993). Order Number DE94005156. Source: OSTI; NTIS; GPO Dep.

Production rates of cosmogenic nuclides made in situ in terrestrial samples and how they are applied to the interpretation of measured radionuclide concentrations were discussed at a one-day Workshop held 2 October 1993 in Sydney, Australia. The status of terrestrial in-situ studies using the long-lived radionuclides ^{10}Be, ^{14}C, ^{26}Al, ^{36}Cl, and ^{41}Ca and of various modeling and related studies were presented. The relative uncertainties in the various factors that go into the interpretation of these terrestrial in-situ cosmogenic nuclides were discussed. The magnitudes of the errors for these factors were estimated and none dominated the final uncertainty.

7555 (LA-UR–93-4406) **Simulations of terrestrial in-situ cosmogenic-nuclide production.** Reedy, R.C. (Los Alamos National Lab., NM (United States)); Nishiizumi, K.; Arnold, J.R.; Lal, D.; Englert, P.A.J.; Klein, J.; Middleton, R.; Jull, A.J.T. Los Alamos National Lab., NM (United States). [1993]. 6p. Sponsored by National Aeronautics and Space Administration, Washington, DC (United States);National Science Foundation, Washington, DC (United States);Deutsche Forschungsgemeinschaft, Bonn (Germany). DOE Contract W-7405-ENG-36. (CONF-930960–6: 6. international conference on accelerator mass spectrometry, Canberra (Australia), 17 Sep - 1 oct 1993). Order Number DE94004999. Source: OSTI; NTIS; GPO Dep.

Targets of silicon and silicon dioxide were irradiated with spallation neutrons to simulate the production of long-lived radionuclides in the surface of the earth. Gamma-ray spectroscopy was used to measure ^{7}Be and ^{22}Na, and accelerator mass spectrometry was used to measure ^{10}Be, ^{14}C, and ^{26}Al. The measured ratios of these nuclides are compared with calculated ratios and with ratios from other simulations and agree well with ratios inferred from terrestrial samples.

7556 (LBL–34783) **Equation of state of neutron star matter, limiting, rotational periods of fast pulsars, and the properties of strange stars.** Weber, F. (Technische Univ. Muenchen, Garching (Germany). Inst. fuer Theoretische Physik); Glendenning, N.K. Lawrence Berkeley Lab., CA (United States). 25 Oct 1993. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-930999–4: NATO Advanced Study Institute on hot and dense nuclear matter, Bodrum (Turkey), 26 Sep - 9 oct 1993). Order Number DE94005214. Source: OSTI; NTIS; INIS; GPO Dep.

In this paper the following items will be treated: The present status of dense nuclear matter calculations and constraints on the behavior of the associated equation of state at high densities from data on rapidly rotating pulsars. Recent finding of the likely existence of a mixed phase of baryons and quarks forming a coulomb lattice in the dense cores of neutron stars. Review of important findings of recently performed calculations of rapidly rotating compact stars. These are constructed in the framework of general relativity theory for a representative collection of realistic nuclear equations of state. Establish the minimum-possible rotational periods of gravitationally bound neutron stars and self-bound strange stars. Its knowledge is of fundamental importance for the decision between pulsars that can be understood as rotating neutron stars and those that cannot (signature of hypothetical self-bound matter of which strange stars are the likely stellar candidates. Investigate the properties of sequences of strange stars. Specifically, we answer the question whether such objects can give rise to the observed phenomena of pulsar glitches, which is at the present time the only astrophysical test of the strange-quark-matter hypothesis.

7557 (NIIYaF-MGU–92-9-258) **Study on the precipitations of high-energy charged particles in the Brazilian anomaly region.** Gusev, A.A.; Pugacheva, G.I.; Bui Van', N.A.; Martin, I.M. Moskovskij Gosudarstvennyj Univ., Moscow (Russian Federation). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki. 1992. 17p. (In Russian). Order Number DE94610505. Source: OSTI; NTIS (US Sales Only); INIS.

Geomagnetic conditions are analyzed when carrying out measurements at the Campinas balloon shoting-range in the region of the Brazilian magnetic anomaly. It is shown that in the region takes place gradual lowering in time of the L shells. The conclusion is made on the radial particle diffusion as the most probable cause of observed in the region particle precipitation in the upper layers of atmosphere. An instrument is described for balloon investigations of particle precipitations. The instrument permits to determine the kind of the particles and to measure their energy. Preliminary results of measurements of the hight dependences of secondary electrons and protons are presented. 6 refs.; 7 figs.; 2 tabs.

7558 (NIIYaF-MGU–92-31-280) **Global changes of radiation situation at heights <1000 km.** Gusev, A.A.; Pugacheva, G.I.; Mineev, Yu.V.; Tolstaya, E.D. Moskovskij Gosudarstvennyj Univ., Moscow (Russian Federation). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki. 1992. 24p. (In Russian). Order Number DE94610504. Source: OSTI; NTIS (US Sales Only); INIS.

On the base of satellite measurements in the 21- and 22-th solar cycles is developed a model of the electron component of the Earth radiation belts. Spatial electron distributions are obtained at 350, 500 and 800 km in the minimum and maximum of the solar cycle. Global changes are noted in the spatial radiation distribution near the Earth in comparison with 1965-1972, namely decreasing trapped electron fluxes and increasing quasi-trapped oned at small heights and variations in the spectrum in the region of the inner radiation belt. A model of trapped protons is developed which permits to precise flux forecasting owing to corrections accounting for Earth magnetic moment decreasing and atmospheric cutting off. 13 refs.; 2 figs.; 5 tabs.

7559 (UCRL-JC–115684) **Two dimensional self-consistent fluid simulation of rf inductive sources.** DiPeso, G.; Vahedi, V.; Hewett, D.W.; Rognlien, T.D. Lawrence Livermore National Lab., CA (United States). 17 Nov 1993. 19p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9311104–13: 40. national symposium of the American Vacuum Society (AVS), Orlando, FL (United States), 15-19 Nov 1993). Order Number DE94003635. Source: OSTI; NTIS; GPO Dep.

The two-dimensional (R - Z) electromagnetic code FMRZ has been written to model inductive sources self-consistently in time. The code models an argon plasma with momentum-transfer, excitation and ionization as electron-neutral reactions and scattering and charge-exchange for the ion-neutral reactions. The electrons and ions are treated as Maxwellian fluid species and a reduced set of Maxwell's equations is used to advance the electromagnetic fields. The set of equations used in FMRZ is not subject to typical numerical constraints present in many time dynamic codes allowing one to choose appropriate the and space scales to resolve only the frequencies and scale lengths of interest. The model retains nonlinear driving terms which give rise to a pondermotive force that distorts the density profile. Density and power profiles will be used to illustrate the physical effects of various terms in the equations. Trends in average density and temperature compare well with an analytic model.

7560 (UCRL-JC–115702) **Equation of state of stellar plasmas.** Rogers, F.J. Lawrence Livermore National Lab., CA (United States). Jun 1993. 29p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9306287–1: Equation of state in astrophysics workshop, Saint-Malo (France), 14-18 Jun 1993). Order Number DE94004186. Source: OSTI; NTIS; GPO Dep.

The equation of state (EOS) of astrophysical plasmas is, for a wide range of stars, nearly ideal; with only small non-ideal Coulomb corrections. Calculating the EOS of an ionizing plasma from a ground state ion, ideal gas model is easy, whereas, fundamental methods to include the small Coulomb corrections are difficult. Attempts to include excited bound states are also complicated by plasma screening and microfield phenomena that weaken and broaden these states. Nevertheless, the high quality of current observational data, particularly seismic, dictates that the best possible models should be used. The present article discusses these issues and describes how they are resolved by fundamental many-body quantum statistical methods. Particular emphasis is placed on

the activity expansion method that is the basis of the OPAL opacity code. Some comparisons with standard methods are given.

6620 Physics of Elementary Particles and Fields

7561 (BNL–52389) **Future directions in particle and nuclear physics at multi-GeV hadron beam facilities.** Geesaman, D.F. (Argonne National Lab., IL (United States)). Brookhaven National Lab., Upton, NY (United States). [1993]. 618p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-930389–: Future directions in particle and nuclear physics at multi-GeV hadron beam facilities, Upton, NY (United States), 4-6 Mar 1993). Order Number DE94002946. Source: OSTI; NTIS; INIS; GPO Dep.

This report contains papers on the following topics in particle and nuclear physics: hadron dynamics; lepton physics; spin physics; hadron and nuclear spectroscopy; hadronic weak interactions; and Eta physics. These papers have been indexed separately elsewhere.

7562 (DOE/ER–0607T) **US/Japan Cooperation in High Energy Physics: Review of activities, 1988–1993.** USDOE Office of Energy Research, Washington, DC (United States). Office of High Energy and Nuclear Physics. 16 Nov 1993. 148p. Sponsored by USDOE, Washington, DC (United States). Order Number DE94005376. Source: OSTI; NTIS; INIS; GPO Dep.

The objective of the Implementing Arrangement was to further the energy programs of both countries by establishing a framework for cooperation in the field of high energy physics, including research, accelerator and detector instrumentation research and development, the fabrication and subsequent use of new experimental devices and facilities, and related joint efforts as may be mutually agreed. Over the years, this cooperation has been very effective and has strengthened the overall collaborative efforts and the understanding between our nations and their citizens. It has demonstrated to the world our ability to work together to attack difficult problems. High Energy Physics goes across national borders; the bond is clearly intellectual and common ground is shared for the benefit of all in a most effective manner. This review covers the activities conducted under the aegis of the US/Japan Committee for Cooperation in High Energy Physics during the past five years (1988–1993). This was the second such US review of the US/Japan cooperative activities; the first was held in 1987.

7563 (DOE/ER/40272–194) **Task A: Research in theoretical elementary particle physics at the University of Florida: Annual progress report.** Field, R.D.; Ramond, P.M.; Sikivie, P.; Thorn, C.B. Florida Univ., Gainesville, FL (United States). Inst. for Fundamental Theory. 1 Nov 1993. 100p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-86ER40272. (UFIFT-HEP–93-24). Order Number DE94004373. Source: OSTI; NTIS; INIS; GPO Dep.

This is the Annual Progress Report of the theoretical particle theory group at the University of Florida under DoE Grant DE-FG05-86ER40272. At present our group consists of four Full Professors (Field, Ramond, Thorn, Sikivie) and three Assistant Professors (Qiu, Woodard, Kennedy). Dallas Kennedy recently joined our group increasing the Particle Theory faculty to seven. In addition, we have three postdoctoral research associates, an SSC fellow, and eight graduate students. The research of our group covers a broad range of topics in theoretical high energy physics with balance between theory and phenomenology. Included in this report is a summary of the last several years of operation of the group and an outline of our current research program.

7564 (DOE/ER/40448–6) **[Electroweak and other interactions in medium-energy nuclear physics]: Progress report.** Mukhopadhyay, N.C. Rensselaer Polytechnic Inst., Troy, NY (United States). Dept. of Physics. [1993]. 43p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-88ER40448. Order Number DE94004161. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses the following topics: spectrum generating algebra; vibrational spectra in the heavy quarkonia; chiral soliton model; pion neutral photoproduction from proton with polarized photons in the delta-1232 region; compton scattering in the delta-1232 region; nucleon magnetic polarizability and the role of the delta resonance; eta photo- and electroproduction; perturbative QCD; and nuclear muon capture.

7565 (DOE/ER/40627–3) **Elementary particle interactions: Progress report, October 1, 1992–September 30, 1993.** Bugg, W.M.; Condo, G.T.; Handler, T.; Hart, E.L.; Read, K.; Ward, B.F.L. Tennessee Univ., Knoxville, TN (United States). Dept. of Physics and Astronomy. Oct 1993. 124p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-91ER40627. Order Number DE94004238. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses: Fermilab E782-E745; GEM; L3 Experiment; Fixed Target Photoproduction; SLD; E144 at SLAC and; Silicon Detectors - Radiation Hardness Program.

7566 (DOE/ER/40661–5) **Indiana University High Energy Physics, Task A: Technical progress report, 1992–1993.** Brabson, B. (and others); Crittenden, R.; Dzierba, A. Indiana Univ., Bloomington, IN (United States). Dept. of Physics. [1993]. 110p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER40661. Order Number DE94000961. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses research at Indians University on the following high energy physics experiments: A search for mesons with unusual quantum numbers; hadronic states produced in association with high-mass dimuons; FNAL E740 (D0); superconducting super collider; and OPAL experiment at CERN.

7567 (DOE/ER/40665–T2) **Duke University High Energy Physics: Progress report, December 1, 1990–March 15, 1993.** Fortney, L.R.; Goshaw, A.T.; Walker, W.D. Duke Univ., Durham, NC (United States). High Energy Physics Group. Mar 1993. 230p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-91ER40665. Order Number DE94004407. Source: OSTI; NTIS; INIS; GPO Dep.

The research program of the Duke High Energy Physics Group is described in this Progress Report and a separate Proposal containing their plans for 1994. These two documents are supplemented by compilations of selected publications, thesis abstracts, and the curriculum vitae of the eleven Ph.D. physicists who are carrying out this research program. This Progress Report contains a review of the research which has been done over the first half (1992 and 1993 to date) of the current three-year DOE grant, plus some earlier research to establish a broader perspective of the research interests. High energy physics research at Duke has three components. The first, Task A, is based upon experiments carried out at Fermilab's Tevatron Collider. The group is finishing the analysis of data from their first collider experiment (E735), a study of inclusive particle production from $\bar{p}$ p collisions at $\sqrt{s}$ = 1.8 TeV. The second component of the research, Task B, deals primarily with heavy flavor physics. The third part of the research program, Task D, deals with preparation for research at the SSC. The authors have been active in the development of tracking detectors for the SSC since 1989, and are now concentrating on the design and construction of straw tube drift chambers for the solenoid detector.

7568 (DOE/ER/40677–2-Pt.1) **Research on elementary particle physics, Task P: Studies in theory and phenomenology of elementary physics: Annual progress report, November 1, 1992–October 31, 1992: Part 1.** Holloway, L.E.; O'Halloran, T.A. Illinois Univ., Urbana, IL (United States). Loomis Lab. of Physics. May 1993. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER40677. Order Number DE94004955. Source: OSTI; NTIS; INIS; GPO Dep.

Continued progress has been made in isolating the variables needed to completely specify a quark or gluon jet, independent of the process in which it is created. We have evidence of a slow, but statistically significant, dependence on the sub-energy of the hard process in which the jet arises. Once this is taken into account, jets from e^+e^- are consistent with those created in $p\bar{p}$. Neural network jet identification studies win be based on this expanded set of variables. Work on the new type of Dirac equation for a relativistic oscillator was presented at the International Conference on High Energy Physics in Dallas, and will be published in the Proceedings of the Conference. Theoretical studies involving jet signals for

theoretically predicted (but as yet undiscovered) particles are underway.

7569 (DOE/ER/40677–2-Pt.2) **Research on elementary particle physics: Part 2: Annual progress report, November 1, 1992–October 31, 1993.** Holloway, L.E. Illinois Univ., Urbana, IL (United States). Loomis Lab. of Physics. May 1993. 57p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER40677. Order Number DE94004956. Source: OSTI; NTIS; INIS; GPO Dep.

This report describes the activities of the University of Illinois Experimental High Energy Physics Group. The physicists in the University of Illinois High Energy Physics Group are engaged in a wide variety of experiments at current and future accelerator laboratories. These include: (1) The CDF experiment at the Fermilab Tevetron $p\bar{p}$ collider. (2) Design and developmental work for the SDC group at SSCL. (3) Experiments at the wide band photon beam at Fermilab. (4) e^+e^- experiments, the Mark III and SLD at SLAC and CLEO at Cornell. (5) CP violation experiments at Fermilab. (6) The HiRes cosmic ray experiment at Dugway Proving Grounds, Utah. (7) Computational facilities. (8) Electronics systems development.

7570 (FNAL/C–93/282) **Panel session: Part 1, In flux – Science Policy and the social structure of Big Laboratories, 1964–1979.** Westfall, C. (Michigan State Univ., East Lansing, MI (United States)). Fermi National Accelerator Lab., Batavia, IL (United States). Sep 1993. 31p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-9206131–5: 3. international symposium on the history of particle physics - the rise of the standard model, Stanford, CA (United States), 24-27 Jun 1992). Order Number DE94002303. Source: OSTI; NTIS; GPO Dep.

This report discusses the in flux of science policy and the social structure of big laboratories during the period of 1964 to 1979 and some sociological consequences of high energy physicists' development of the standard model during the same period.

6621 General Theory of Particles and Fields

Refer also to citation(s) 7311, 7536, 7601

7571 (BONN-HE–93-10) **New supersymmetrizations of the generalized KDV hierarchies.** Figueroa-O'Farrill, J.M.; Stanciu, S. Bonn Univ. (Germany). Physikalisches Inst. Mar 1993. 12p. (HEP-TH–9303168). Order Number DE94734004. Source: OSTI; NTIS (US Sales Only); INIS.

Recently we investigated a new supersymmetrization procedure for the KdV hierarchy inspired in some recent work on supersymmetric matrix models. We extend this procedure here for the generalized KdV hierarchies. The resulting supersymmetric hierarchies are generically nonlocal, expect for the case of Boussinesque which we treat in detail. The resulting supersymmetric hierarchy is integrable and bihamiltonian and contains the Boussinesque hierarchy as a subhierarchy. In a particular realization, we extend it by defining supersymmetric odd flows. We end with some comments on a slight modification of this supersymmetrization which yields local equations for any generalized KdV hierarchy. (orig.)

7572 (BONN-HE–93-11) **Naked singularities in four-dimensional string backgrounds.** Mohammedi, N. Bonn Univ. (Germany). Physikalisches Inst. Apr 1993. 16p. (HEP-TH–9304013). Order Number DE94733996. Source: OSTI; NTIS (US Sales Only); INIS.

It is shown that gauged nonlinear sigma models can be always deformed by terms proportional to the field strength of the gauge fields (nonminimal gauging). These deformations can be interpreted as perturbations, by marginal operators, of conformal coset models. When applied to the SL(2, R)xSU(2)/U(1)xU(1) WZWN model, a large class of four-dimensional curved spacetime backgrounds are obtained. In particular, a naked singularity may form at a time when the volume of the universe is different from zero. (orig.)

7573 (DESY–93-051) **A monopole solution in open string theory.** Behrndt, K. Deutsches Elektronen-Synchrotron (DESY), Zeuthen (Germany). Inst. fuer Hochenergiephysik. Mar 1993. 16p. (HEP-TH–9304096). Order Number DE94734103. Source: OSTI; NTIS (US Sales Only); INIS.

We investigate a solution of the Weyl invariance conditions in open string theory in 4 dimensions. In the closed string sector this solution is a combination of the SU(2) Wess-Zumino-Witten model and a Liouville theory. The investigation is carried out in the σ model approach where we have coupled all massless modes (especially and abelina gauge field via the boundary) and tachyon fields. Neglecting all higher derivatives in the field strength we get an exact result which can be interpreted as a monopole configuration living in non-trivial space time. The masses of both tachyon fields are quantized by c_{wzw} and vanish for $c_{wzw} = 1$. (orig.)

7574 (IC–93/188) **On quantization of time-dependent systems with constraints.** Hadjialieva, F.G. (Azerbaijan State Pedagogical Univ., Baku (Azerbaijan)); Jafarov, R.G. International Centre for Theoretical Physics, Trieste (Italy). Jul 1993. 7p. Order Number DE94611114. Source: OSTI; NTIS (US Sales Only); INIS.

The Dirac method of canonical quantization of theories with second class constraints has to be modified if the constraints depend on time explicitly. A solution of the problem was given by Gitman and Tyutin. In the present work we propose an independent way to derive the rules of quantization for these systems, starting from physical equivalent theory with trivial nonstationarity. (author). 4 refs.

7575 (IC–93/211) **N = 4 supersymmetry from the quantum affine algebra U_q(A-circumflex$^{(1)}_3$).** EL Hassouni, A. (Laboratory of Theoretical Physics, Rabat (Morocco). Faculte des Sciences de Rabat); Hassouni, Y.; Zakkari, M. International Centre for Theoretical Physics, Trieste (Italy). Jul 1993. 9p. Order Number DE94611145. Source: OSTI; NTIS (US Sales Only); INIS.

The quantized algebra U_q(A-circumflex$^{(1)}_3$) is analysed. It is shown that the U_q(A-circumflex$^{(1)}_3$) and N = 4 SUSY algebras have many similarities for special values of q, namely $q^{2\alpha} = -1$ where α is a continuous parameter. Moreover, U_q(A-circumflex$^{(1)}_3$) can be endowed with at most three independent spectral parameter Hopf structures. The adjoint action of U_q(A-circumflex$^{(1)}_3$) is given. (author). 10 refs.

7576 (IS-T–1684) **Topics in electroweak baryogenesis: The sphaleron and t-violation.** SeungKoog, L. Ames Lab., IA (United States). 7 Dec 1993. 121p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-82. Order Number DE94004886. Source: OSTI; NTIS; INIS; GPO Dep.

Assuming that beyond the standard model physics can be parametrized in terms of high dimensional operators, we examine their effects on the energy of the sphaleron and the classical solution of the gauge and Higgs fields. In the absence of fermions, all of the six dimension 6 operators which are SU(2) symmetric have a small effect when calculated perturbatively. However, calculated non-perturbatively, one of the operators alters the boundary conditions of the equations of motion of the Higgs and gauge fields involved, and another operator gives rise to an abrupt change in the sphaleron energy at a small but definite Higgs quartic coupling. The magnitude of the T-violating muon polarization induced by electromagnetic final state interaction in the radiative Kaon decay $K^+ \rightarrow \mu^+\nu\mu\gamma$ is order of 10^{-3}.

7577 (JINR-E–2-92-107) **On a connection between the Yang-Mills equations in dimension greater than four and the classical Yang-Baxter equations.** Ivanova, T.A.; Popov, A.D. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1992. 16p. Order Number DE94611115. Source: OSTI; NTIS (US Sales Only); INIS.

We consider the Yang-Mills equations for gauge fields of an arbitrary semisimple Lie group G in Euclidean spaces R^{11} with dimension n>4. 21 refs.

7578 (JINR-E–2-92-168) **About G-parity violation in $\tau^- \rightarrow \nu\pi\eta$ decay.** Bednyakov, V.A. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Problems. 1992. 8p. Order Number DE94611146. Source: OSTI; NTIS (US Sales Only); INIS.

The characteristics of the G-parity forbidden $\tau \to \nu\pi\eta$ decay were calculated in the phenomenological quark model with allowance for isospin symmetry violation. 10 refs.; 2 tabs.

7579 (JINR-E-2-92-172) **String-like excitations in QED.** Fursaev, D.V. (Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics); Shabanov, S.V.; Prokhorov, L.V. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1992. 8p. Order Number DE94611116. Source: OSTI; NTIS (US Sales Only); INIS.

The evolution of string-like excitations of fields (exponential line integrals) in free QED and in QED with static sources is investigated. 9 refs.

7580 (JINR-E-2-92-176) **Phase transition in $g\Phi_2^4$ theory.** Ganbold, G.; Efimov, G.V. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1992. 12p. Order Number DE94611117. Source: OSTI; NTIS (US Sales Only); INIS.

The vacuum stability of a scalar $g\Phi$ theory in two-dimension is studied. It is in complete agreement with the Simon-Griffiths theorem. 18 refs.

7581 (JINR-E-2-92-191) **Effective potential in $g\phi_2^4$ theory.** Ganbold, G.; Efimov, G.V. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1992. 10p. Order Number DE94611118. Source: OSTI; NTIS (US Sales Only); INIS.

The scalar ϕ_2^4 theory is studied. A leading term of the effective potential and corrections to it are obtained. A second-order phase transition which is in agreement with the existing results is observed. 14 refs.; 1 fig.

7582 (JINR-E-2-92-195) **On a complex vacuum structure in non-abelian gauge theories and on the place of Majorana particles in these theories.** Beshtoev, Kh.M. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1992. 7p. Order Number DE94611147. Source: OSTI; NTIS (US Sales Only); INIS.

It is shown that a complex vacuum structure is impossible in SU(N) gauge theories. The complex vacuum structure in extended theories with complec vector fields. It is shown that Majorana particles cannot exist in standard SU(N) gauge-invariant theories. 7 refs.

7583 (JINR-E-2-92-502) **Local symmetries in systems with constraints.** Gogilidze, S.A.; Sanadze, V.V.; Surovtsev, Yu.S.; Tkebuchava, F.G. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1992. 16p. Order Number DE94611148. Source: OSTI; NTIS (US Sales Only); INIS.

For arbitrary systems with first-class constraints a method is given for constructing local gauge tranformations in accordance with the Dirac hypothesis in phase and configuration spaces. 19 refs.

7584 (JINR-E-2-92-538) **Infrared troubles of differential renormalization.** Avdeev, L.V.; Kazakov, D.I.; Kondrashuk, I.N. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1992. 24p. Order Number DE94611119. Source: OSTI; NTIS (US Sales Only); INIS.

The possibility of generalizing differential renormalization of D.Z. Freedman, K.Jonnson and J.I.Latorre in an invariant fashion to theories with infrared divergencies is investigated. It is concluded that the calculations on infrared differential renormalization lead to incorrect result. 16 refs.; 7 figs.

7585 (JINR-R-2-92-505) **Doppler effect for electron and Lorentz transfomations in special relativity theory.** Klenin, B.A. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Reactions. 1992. 10p. (In Russian). Order Number DE94611111. Source: OSTI; NTIS (US Sales Only); INIS.

It is shown that in the electromagnetic field of vacuum the electron possesses the wave motion, frequency of which is equal to the Doppler frequency. On this basis the Lorentz transformations for coordinates and time of the special relativity theory are obtained. 7 refs.

7586 (JINR-R-4-92-367) **Supersymmetry, geometric nonadiabatic phases, exact solutions in diatomic systems.** Suz'ko, A.A. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1992. 23p. (In Russian). Order Number DE94611149. Source: OSTI; NTIS (US Sales Only); INIS.

It is shown that the nonadiabatic geometric phases are generalized in addition to the Aharonov - Anandan ones. 32 refs.

7587 (JINR-R-13-92-551) **Frequency method estimate of the pulse transient characteristic of power feedback in the IBR-2 reactor.** Popov, A.K. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Problems. 1992. 8p. (In Russian). Order Number DE94611120. Source: OSTI; NTIS (US Sales Only); INIS.

The IBR-2 pulsed reactor power feedback parameters are estimated by means pf the frequency analysis of recorded power oscillations caused by reactivity jump oscillations. 1 ref.; 4 figs.

7588 (KFKI-1993-08/A) **Z(2N) parafermions from U(1) loop group.** Boehm, G.; Szlachanyi, K. Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. 17p. Order Number DE94611112. Source: OSTI; NTIS (US Sales Only); INIS.

The concept of the loop group describes a conformal model in terms of bounded operators. The simplest possibility, the central extended U(1) loop group algebra spanned by operators W(f), $f:S^1 \to R$ satisfying Weyl algebra relations is considered. The possibility that the loop group element e^{if} represented by W(f) does not necessarily lie in the identity component is investigated. This leads to a quantization of the level parameter k in the cocycle. Considering this 'large' loop group algebra as the algebra of observables, their Z_k type of superselection sectors is studied, and fields are constructed that create the Z_k charges. The commutation relations of these fields turn out to be of the parafermion type. (K.A.) 4 refs.

7589 (LAPP-AL-391-92) **W-algebras and superalgebras from constrained WZW models: A group theoretical classification.** Frappat, L.; Ragoucy, E.; Sorba, P. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. Jul 1992. 67p. Order Number DE94611121. Source: OSTI; NTIS (US Sales Only); INIS.

A classification of W algebras and superalgebras arising in Abelian as well as non Abelian Toda theories is presented. Each model, obtained from a constrained WZW action, is related with an Sl(2) subalgebra (resp. OSp(1/2) superalgebra) of a simple Lie algebra (resp. superalgebra) G. However, the determination of an $U(1)_Y$ factor, commuting with Sl(2) (resp. OSp(1/2)), appears, when it exists, particularly useful to characterize the corresponding W algebra. The (super) conformal spin contents of each W (super)algebra is performed. The class of all the superconformal algebras (i.e. with conformal spins $s \leq 2$) is easily obtained as a byproduct of our general results. (author) 26 refs.; 21 tabs.

7590 (LAPP-AL-404-92) **Deformation of the strange superalgebra P-tilde(n).** Frappat, L. (Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires); Sorba, P.; Sciarrino, A. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. Oct 1992. 7p. Contract CEE SC 1000221. Order Number DE94611122. Source: OSTI; NTIS (US Sales Only); INIS.

A deformation $U_q(\text{P-tilde}(n))=\text{P-tilde}_q(n)$ of the extended non contragredient (strange) superalgebra of P(n), denoted by P-tilde(n), is proposed. A realization of $\text{P-tilde}_q(n)$ in terms of q-bosons and q-fermions is presented. Then a procedure to build up a set of representations of $\text{P-tilde}_q(n)$ is briefly discussed. As a by-product, a new realization of $SU_q(n)$ is obtained. (author) 7 refs.

7591 (LAPP-AL-408-92) **Folding the W-algebras.** Frappat, L.; Ragoucy, E.; Sorba, P. Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules Elementaires. Nov 1992. 28p. Order Number DE94611123. Source: OSTI; NTIS (US Sales Only); INIS.

The folding of the Dynkin diagram of A_{2n} (resp., A_{2n-1}) produces the B_n (resp., C_n) Dynkin diagram, similarly the symmetry algebra W of a Toda model based on B_n (resp., C_n) can be seen as resulting from the folding of a W-algebra based on A_{2n} (resp., A_{2n-1}). More generally, W algebras related to the B-C-D algebra series can appear from W algebras related to the unitary ones. Such an

approach is particularly well adapted to obtain fusion rules of W algebras based on non simply laced algebras from fusion rules corresponding to the A_n case. Analogously, super-W algebras associated to orthosymplectic superalgebras are deduced from those relative to the unitary A(m,n) series. (author) 16 refs.; 1 tab.

7592 (LA-UR–93-3920) **Data on parity violation in the compound nucleus and its interpretation.** Bowman, J.D. (Los Alamos National Lab., NM (United States)); Frankle, C.M.; Knudson, J.N. TRIPLE Collaboration. Los Alamos National Lab., NM (United States); North Carolina State Univ., Raleigh, NC (United States); Duke Univ., Durham, NC (United States). [1993]. 23p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36 ; FG05-88ER40441 ; FG05-91ER40619. (CONF-9305235–5: International workshop/time reversal invariance and parity violation in neutron physics, Dubna (Russian Federation), 4-7 May 1993). Order Number DE94003965. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses the measurement of parity-violating asymmetries in the compound nucleus; summary of data on this process; theories of the random asymmetry, M^2; and theories of the constant asymmetry.

7593 (LA-UR–93-4315) **(j,0)⊕(0,j) representation space: Dirac-like construct.** Ahluwalia, D.V.; Johnson, M.B.; Goldman, T. Los Alamos National Lab., NM (United States). [1993]. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9309304–2: 17. International School of Theoretical Physics meeting on standard model and beyond, Krakow (Poland), Sep 1993). Order Number DE94005011. Source: OSTI; NTIS; INIS; GPO Dep.

This is first of the two invited lectures presented at the "XVII International School of Theoretical Physics: Standard Model and Beyond 1993." The text is essentially based on a recent publication by the present authors. Here we show that the Dirac-like construct in the (j,0)⊕(0,j) representation space support a Bargmann-Wightman-Wigner type quantum field theory.

7594 (ANL-HEP-CP–93-98) **Quenched QCD spectrum on a $32^3 \times 64$ lattice.** Kim, S.; Sinclair, D.K. Argonne National Lab., IL (United States). Nov 1993. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9310250–1: LATTICE 93: international symposium on lattice field theory, Dallas, TX (United States), 12-17 Oct 1993). Order Number DE94004623. Source: OSTI; NTIS; INIS; GPO Dep.

We present light hadron masses calculated from quenched QCD on a $32^3 \times 64$ lattice, using staggered quark sources of masses, $m_q a$ = 0.01,0.005 and 0.0025. Results from β = 6. 0(preliminary) and those from β = 6.5 are compared. Using $m_p(m_q = 0)$ and f_π, we suggest that β = 6.5 is in the asymptotic scaling region and β = 6.0 result shows ~ 20% (bare coupling) or ~ 10% (improved coupling) scaling violation. Flavor symmetry appears to be restored at β = 6.5. The estimated pion decay constant, f_π, is 93(4) MeV at β = 6.5, where the experimental value is 93 MeV.

7595 (BUDKERINP–92-57) **Logarithmic corrections of the two-body QED problem.** Khriplovich, I.B.; Mil'shtejn, A.I.; Elkhovskij, A.S. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1992. 27p. (IYaF–92-57.). Order Number DE94611157. Source: OSTI; NTIS (US Sales Only); INIS.

The logarithmic part of the Lamb shift, the contribution of the relative order $\alpha^3\log(1/\alpha)$ to the atomic state energy, is related to the usual infrared divergence. For positronium, the calculated logarithmic correction does not vanish only in n^3S_1 states and constitutes $5/24m\alpha^6\log(1/\alpha)/m^3$. Logarithmic corrections of the relative order $\alpha^2\log(1/\alpha)$ to the positronium decay rate are also of the relativistic origin and can be easily computed within the same approach. 31 refs.; 11 figs.

7596 (CONF-9201167–Summ.) **Heavy quark symmetry: Theory and applications.** Isgur, N. (Southeastern Universities Research Association, Inc., Newport News, VA (United States). Continuous Electron Beam Accelerator Facility). California Univ., Santa Barbara, CA (United States). Inst. for Theoretical Physics. 30 Jul 1993. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-92ER40707. From Workshop on heavy quark symmetry: theory and applications; Santa Barbara, CA (United States); 13-31 Jan 1992. Order Number DE94003559. Source: OSTI; NTIS; INIS; GPO Dep.

This report very briefly discusses heavy quark symmetry.

7597 (DOE/ER/40291–20) **Asymptotic coherence of gluons and of q-bosons.** Nelson, C.A. State Univ. of New York, Binghamton, NY (United States). Dept. of Physics. [1993]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-86ER40291. (CONF-9306140–2: Coherent states: past present and future, Oak Ridge, TN (United States), 14-17 Jun 1993). Order Number DE94005417. Source: OSTI; NTIS; INIS; GPO Dep.

In theoretical physics one of the most important aspects of coherent states is that they can often be simply and reliably used to investigate the quantum coherence and correlation properties of new dynamical, quantum field theories. First, this paper reviews the coherent/degenerate state treatment of the infra-red dynamics of perturbative QCD. This based on the asymptotic behavior of the Hamiltonian operator as $|t| \to \infty$ in the interaction representation. Second, the paper reviews the usage of q-analogue coherent states $|z>_q$ to deduce coherence and uncertainty properties of the q-analogue quantized radiation field in the $|z>_q$ "classical limit" where $|z|$ is large. Third, for future applications, a new "projector" definition of the usual coherent states and of the squeezed states is reported.

7598 (DOE/ER/40412–T3) **The study of hadronic matter at the highest energy density: The search for the deconfined quark-gluon phase using 2 TeV p-p Collisions: Progress report, January 1, 1989–December 31, 1989.** Scharenbert, R.; Hirsch, A. Purdue Univ., Lafayette, IN (United States). Dept. of Physics. Dec 1989. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-88ER40412. Order Number DE94004409. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses: running E-735, 1988–1989; publications from the 1987–1988 of E-735; exclusive nuclear fragmentation experiment at the Bevelac using the new TPC; research and development on parallel plate avalanche detectors; and data analysis.

7599 (DOE/ER/40427–20-N93) **The nucleon-nucleon potential in the chromodielectric soliton model.** Koepf, W. (Washington Univ., Seattle, WA (United States). Dept. of Physics); Wilets, L.; Pepin, S.; Stancu, F. Washington Univ., Seattle, WA (United States). Dept. of Physics. [1993]. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG06-88ER40427. (CONF-9309302–1: Conference on many-body physics, Coimbra (Portugal), 20-25 Sep 1993). Order Number DE94004646. Source: OSTI; NTIS; INIS; GPO Dep.

The short- and medium-range parts of the nucleon-nucleon interaction are being studied in the framework of the chromodielectric soliton model. The model consists of current quarks, gluons in the abelian approximation, and a scalar σ field which simulates the nonabelian interactions of the gluons and governs the medium through the dielectric function $\kappa(\sigma)$. Absolute color confinement is effected by the vanishing of the dielectric in vacuum; this also removes the troublesome van der Waals problem. The authors distinguish between spatial confinement, which arises from the self energy of the quarks in medium (excluding MFA contributions), and color confinement which is effected through OGE in the MFA (including the corresponding self energy contributions). The static (adiabatic) energies are computed as a function of deformation (generalized bag separation) in a constrained MFA. Six quark molecular-type wave functions in all important space-spin-isospin-color configurations are included. The gluon propagator is solved in the deformed dielectric medium. The resultant Hamiltonian matrix is diagonalized. Dynamics are handled in the Generator Coordinate Method, which leads to the Hill-Wheeler integral equation. In the present case, this yields a set of coupled equations corresponding

to the various configurations. Although this can be approximated by a set of differential equations, they propose to solve the integral equations with some regularization scheme.

7600 (DOE/ER/40427–21-N93) **Collapse of flux tubes.** Wilets, L. Washington Univ., Seattle, WA (United States). Dept. of Physics. [1993]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG06-88ER40427. (CONF-930999–3: NATO Advanced Study Institute on hot and dense nuclear matter, Bodrum (Turkey), 26 Sep - 9 oct 1993). Order Number DE94004645. Source: OSTI; NTIS; INIS; GPO Dep.

Flux tubes are one of the most elementary systems of quantum chromodynamics. They are the idealized configurations of heavy quark-antiquark pairs at large separations L such that the region between can be assumed to possess axial-cylindrical symmetry. They play a central role in lattice QCD calculations and in models of QCD, as well as in the phenomenology of QCD processes. Lattice QCD calculations on flux tubes are generally limited to the quenched approximation (no massless quarks) and allow for a separation of the heavy quark-antiquark of only about 1 fm. Static flux tubes are unstable at separations greater than 1 fm, since the energy required to stretch the tube by 1 fm is about 1 GeV and that is about the energy difference between a quarkonium, $Q\bar{Q}$, and a pair of heavy-light mesons, $Q\bar{q} + \bar{Q}q$. Lattice calculations without light quarks cannot explore this instability. The author then reviews work on efforts to explore the creation of light quark pairs as a mechanism for flux tube breaking.

7601 (DOE/ER/40592–3) **Quantum Chromodynamics and nuclear physics at extreme energy density: Progress report, May 1992–April 1993.** Mueller, B. Duke Univ., Durham, NC (United States). Dept. of Physics. 15 May 1993. 56p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-90ER40592. Order Number DE94004418. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses research in the following topics: Hadron structure physics; relativistic heavy ion collisions; finite- temperature QCD; real-time lattice gauge theory; and studies in quantum field theory.

7602 (IC–93/200) **Anomaly cancellation in a class of chiral flavor gauge models.** Pisano, F.; Tran Anh Tuan. International Centre for Theoretical Physics, Trieste (Italy). Jul 1993. 9p. Order Number DE94611152. Source: OSTI; NTIS (US Sales Only); INIS.

We show typical features on anomaly cancellation in the 3 - n - 1 extensions of the 3 - 2 - 1 standard model, with n = 3,4 which has been proposed recently. We point out that in this class of theories a natural explanation for the fundamental question of fermion family replication arises from the theoretical requirements of renormalizability and self-consistency, which constrains the number of the QFD families to the QCD color degrees of freedom. (author). 10 refs.

7603 (IHEP-OTF–92-149) **Leptonic decay constants of heavy quarkonia in effective QCD sum rules.** Kiselev, V.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (Russian Federation). Inst. Fiziki Vysokikh Ehnergij. 1992. 14p. Order Number DE94611160. Source: OSTI; NTIS (US Sales Only); INIS.

The QCD sum rule scheme, which allows one effectively to take into account the heavy quarkonium peculiarities such as nonrelativistic motion and large mass values of the quarks is considered. The phenomenological scaling law is derived for the leptonic constants with the use of the heavy quarkonium mass spectra. The law describes the data on the values of f_ϕ, f_ψ and f_γ rather good and predicts f_{B_c}. 12 refs.; 2 tabs.

7604 (INP-MSU–92-27-276) **QCD condensates and analytical structure of pion's form factor in sum rules methods.** Meshcheryakov, D.V. Moskovskij Gosudarstvennyj Univ., Moscow (Russian Federation). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki. 1992. 12p. (NIIYaF-MGU–92-27-276.). Order Number DE94611161. Source: OSTI; NTIS (US Sales Only); INIS.

A simple pion's form factor representation with physically reasonable analytical structure is applied to QCD sum rules methods. QCD condensate value are obtained through finite-energy sum rules (FESR) and Shifman-Vainstein-Zakharov sum rules (SVZ). The increase of gluon and four quark condensate values previously predicted is confirmed. 12 refs.

7605 (JINR-E–2-92-556) **The scattering of the electron on quark and the nucleon in the case of polarized particles.** Kukhto, T.V.; Panov, S.N.; Kutaev, E.A.; Sazonov, A.A. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1992. 28p. Order Number DE94611150. Source: OSTI; NTIS (US Sales Only); INIS.

The cross section of elastic scattering of the longitudinally polarized electron on polarized quark is considered. 16 refs.; 3 figs.

7606 (KFKI–1993-11/A, pp. 107-112) **Screening of static QED electric fields in hot QCD.** Kapusta, J. (Minnesota Univ., Minneapolis, MN (United States). School of Physics and Astronomy). Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. (CONF-9208245–: Budapest workshop on relativistic heavy ion collisions, Budapest (Hungary), 10-13 Aug 1992). In *Proceedings of the Budapest workshop on relativistic heavy ion collisions.* 149p. Order Number DE94611162. Source: OSTI; NTIS (US Sales Only); INIS.

The screening length for static QED electric fields in hot QCD is computed using hadronic degrees of freedom at low temperature and quark-gluon degrees of freedom at high temperature. The high temperature result is equivalent to computing the photon self-energy to two-loop order in QCD plus summation of the leading infrared divergent diagrams at three-loop and higher order. Comparison is made to the screening length extracted from singlet and nonsinglet susceptibilities as measured in two-flavor lattice QCD. (author) 16 refs.; 2 figs.

7607 (LA-UR–93-4147) **Back-reaction beyond the mean field approximation.** Kluger, Y. Los Alamos National Lab., NM (United States). [1993]. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-930999–2: NATO Advanced Study Institute on hot and dense nuclear matter, Bodrum (Turkey), 26 Sep - 9 oct 1993). Order Number DE94003936. Source: OSTI; NTIS; INIS; GPO Dep.

A method for solving an initial value problem of a closed system consisting of an electromagnetic mean field and its quantum fluctuations coupled to fermions is presented. By tailoring the large N_f expansion method to the Schwinger-Keldysh closed time path (CTP) formulation of the quantum effective action, causality of the resulting equations of motion is ensured, and a systematic energy conserving and gauge invariant expansion about the electromagnetic mean field in powers of $1/N_f$ is developed. The resulting equations may be used to study the quantum nonequilibrium effects of pair creation in strong electric fields and the scattering and transport processes of a relativistic e^+e^- plasma. Using the Bjorken ansatz of boost invariance initial conditions in which the initial electric mean field depends on the proper time only, we show numerical results for the case in which the N_f expansion is truncated in the lowest order, and compare them with those of a phenomenological transport equation.

7608 (SLAC-PUB–6384) **Tests of the Electroweak Standard Model at high energies ($\sqrt{s}$ > 50 GeV).** Swartz, M.L. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Nov 1993. 23p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-930823–17: 16. international symposium on lepton and photon interactions, Ithaca, NY (United States), 10-15 Aug 1993). Order Number DE94005230. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses topics on: Specification of the Minimal Electroweak Standard Model (MSM); Tree-Level Tests of the MSM; and Loop-Level Tests of the MSM.

7609 (ANL-HEP-CP–93-52) **Vector leptoquark production at hadron colliders.** Hewett, J.L. (Argonne National Lab., IL (United States)); Rizzo, T.G.; Pakvasa, S.; Haber, H.E.; Pomarol,

A. Argonne National Lab., IL (United States). Sep 1993. 9p. Sponsored by USDOE, Washington, DC (United States);Texas National Research Lab. Commission, De Soto, TX (United States). DOE Contract W-31109-ENG-38. Grant RGFY93-330. (UH–511-775-93; SCIPP–93/36; CONF-9306176–18: Workshop on physics at current accelerators and the supercollider, Argonne, IL (United States), 2-5 Jun 1993). Order Number DE94003696. Source: OSTI; NTIS; INIS; GPO Dep.

We explore the production of vector leptoquarks(V) at the Tevatron, LHC, and SSC through both quark-antiquark and gluon fusion: $q\bar{q}$, $gg \rightarrow VV$. The cross sections are found to be somewhat larger than for scalar leptoquarks of the same mass implying enhanced search capabilities.

7610 (ANL-HEP-CP–93-95) **Monte Carlo event generators for hadron-hadron collisions.** Knowles, I.G. (Argonne National Lab., IL (United States). High Energy Physics Div.); Protopopescu, S.D. Argonne National Lab., IL (United States). High Energy Physics Div. Jun 1993. 29p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9306176–14: Workshop on physics at current accelerators and the supercollider, Argonne, IL (United States), 2-5 Jun 1993). Order Number DE94003212. Source: OSTI; NTIS; INIS; GPO Dep.

A brief review of Monte Carlo event generators for simulating hadron-hadron collisions is presented. Particular emphasis is placed on comparisons of the approaches used to describe physics elements and identifying their relative merits and weaknesses. This review summarizes a more detailed report.

7611 (ANL-HEP-CP–93-99) **Deep Inelastic Scattering results from the first year of HERA operation.** Magill, S.R. Argonne National Lab., IL (United States). [1993]. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9306176–19: Workshop on physics at current accelerators and the supercollider, Argonne, IL (United States), 2-5 Jun 1993). Order Number DE94004578. Source: OSTI; NTIS; INIS; GPO Dep.

The first year of operation of the HERA electron-proton collider has resulted in Deep Inelastic Scattering (DIS) Physics results from both the H1 and ZEUS experiments. Reported here are the H1 and ZEUS measurements of the proton structure function F_2 at higher Q^2 and lower x than previously reported from fixed target experiments. Also included are the results of QCD studies on hadronic final states and jets, and the observation of high Q^2 charged current events from both experiments. Finally, the observation of events with large rapidity gaps by the ZEUS collaboration is also reported.

7612 (ANL-HEP-CP–93-105) **Physics at HERA.** Derrick, M. Argonne National Lab., IL (United States). [1993]. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9309297–2: 23. international symposium on multiparticle dynamics, Aspen, CO (United States), 13-17 Sep 1993). Order Number DE94005117. Source: OSTI; NTIS; INIS; GPO Dep.

HERA is the first electron-proton colliding beam facility and the big news about it is that it works, despite concerns both about the reproducibility of the magnetic field in the proton ring magnets at injection and about the e-p beam-beam interaction. It is, however, a complex accelerator facility that will take a few years to bring up to full and efficient operation. With the present center of mass energy of 296 GeV, it extends the energy range for photoproduction studies by an order of magnitude over fixed target experiments and deep-inelastic e-p scattering up to momentum transfer values approaching 10^5 GeV^2 in both neutral and charged current interactions. At reasonable Q^2, and so with the present luminosity, events with Bjorken x down to a few times 10^{-5} are being studied. Two powerful general-purpose detectors – H1 and ZEUS – have been constructed to address these physics challenges and both collaborations have made new and interesting measurements as presented at this and other recent HEP conferences. The experimental program started in July 1992 and we are on a steep learning curve both with HERA and with the detectors.

7613 (ANL/PHY/CP–80398) **Electron scattering from polarized deuterium at VEPP-3.** Jones, C.E. (and others); Coulter, K.P.; Gilman, R. Argonne National Lab., IL (United States). [1993]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9308164–6: 14. European conference on few-body problems in physics, Amsterdam (Netherlands), 22-27 Aug 1993). Order Number DE94003204. Source: OSTI; NTIS; INIS; GPO Dep.

The experiment to measure the tensor analyzing power T_{20} of the deuteron using a tensor-polarized internal target at the VEPP-3 electron storage ring in Novosibirsk is currently in its second phase. Tensor-polarized deuterium atoms from an atomic beam source feed an active storage cell in the electron ring, serving as the target for a beam of 2 GeV unpolarized electrons. Analysis of the first Phase 2 data in the kinematic range $Q^2 = 0.36 - 0.50$ (GeV/c)^2 is reported here. Plans for the third phase of the experiment, which will use a high-density, laser-driven polarized deuterium target, are also discussed. The measurement of T_{20} from the second and third phases of the experiment will cover the kinematic region $0.36 \leq q \leq 0.90$ (GeV/c)^2 where T_{20} is particularly sensitive to isoscalar meson exchange currents.

7614 (BNL–49593) **The E2/M1 mixing ratio in the excitation of the Δ from polarized photo-reactions.** The LEGS Collaboration. Brookhaven National Lab., Upton, NY (United States). [1993]. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-9308164–7: 14. European conference on few-body problems in physics, Amsterdam (Netherlands), 22-27 Aug 1993). Order Number DE94004235. Source: OSTI; NTIS; INIS; GPO Dep.

In constituent quark models, a tensor interaction, mixing quark spins with their relative motion, is introduced to reproduce the observed baryon spectrum. This has a consequence completely analogous to the nuclear tensor force between the n and p in deuterium. A D state component is mixed into what would otherwise be a purely S-wave object. The D-wave component breaks spherical symmetry, resulting in a non-vanishing matrix element for the nucleon and a static quadrupole moment and deformation for its first excited state, the Δ resonance, at ~325 MeV. The magnitude and sign of this D-state component are quite sensitive to the internal structure of the proton and have been of great interest in recent years. The intrinsic deformation of the spin 1/2 nucleon cannot be observed directly; it must be inferred from transition amplitudes such as $N \rightarrow \Delta$. In a spherical bag model, the Δ is viewed as a pure quark-spin-flip transition proceeding only through M1 excitation. If there are D-state admixtures in the ground state of the nucleon and/or Δ, quadrupole excitation, in addition to spin-flip M1, is also allowed. The problem is to evaluate the relative magnitude of this E2 excitation in the presence of the dominant M1 transition. A variety of models predict this mixing ratio to be quite small, anywhere from −0.9% to −6%, so that a high degree of precision is demanded of experiment.

7615 (BNL–49665) **Production of φ mesons in central Si + Au collisions at 14.6 A·GeV/c.** Wang, Yufeng (Columbia Univ., New York, NY (United States). Nevis Labs.). E-802 Collaboration. Brookhaven National Lab., Upton, NY (United States). [1993]. 4p. Sponsored by USDOE, Washington, DC (United States);National Aeronautics and Space Administration, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-930636–10: 10. international conference on ultra-relativistic nucleus-nucleus collisions, Borlaenge (Sweden), 20-24 Jun 1993). Order Number DE94003196. Source: OSTI; NTIS; INIS; GPO Dep.

The production of φ mesons from, central Si + Au collisions has been measured by E859 at the BNL-AGS by selecting events with identified K^+K^- pairs. The values for the mass and width of the φ obtained from the invariant mass of the kaon pairs are consistent with those of the Particle Data Book. Preliminary results for the invariant $1/2\pi m_T \, d^2n/dm_T dy$ distribution and dN/dy are presented.

7616 (BUDKERINP–91-110) **Measurement of the branching ratio for Υ(1s) state into $\mu^+\mu^-$ and search for decays $\upsilon(1s) \rightarrow \pi^+\pi^-$, K^+K^-, pp-bar.** Baru, S.E. (and others); Bejlin, M.V.; Blinov, A.E. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1991. 18p. (IYaF–91-110.). Order Number DE94611207. Source: OSTI; NTIS (US Sales Only); INIS.

In the experiment with e^+e^--beams performed at the VEPP-4 storage ring with the MD-1 detector have been measured $B_{\mu\mu}$,

the branching ratio for the decay of $\upsilon(1S)$ state into $\mu^+\mu^-B_{\mu\mu}$=(2.12+0.20+0.10)% is obtained. It is shown that the continuum and resonance interference should be taken into account. For the first time the upper limits on the branching ratio for the decays $\upsilon\rightarrow\pi^+\pi^-$, K^+K^-, pp-bar have been obtained: $Br(\upsilon\rightarrow\pi^+\pi^-)<5x10^{-4}$, $Br(\upsilon\rightarrow K^+K^-)<5x10^{-4}$, $Br(\upsilon\rightarrow$pp-bar$)<5x10^{-4}$. 26 refs.; 6 figs.; 7 tabs.

7617 (BUDKERINP–92-61) **Low energy theorems from the effective Lagrangian with vector mesons.** Silagadze, Z.K. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1992. 15p. (IYaF–92-61.). Order Number DE94611173. Source: OSTI; NTIS (US Sales Only); INIS.

It is shown that the previously proposed effective Lagrangian with vector mesons correctly reproduces all current algebra low-energy theorems in the domain of its validity. 12 refs.

7618 (DOE/ER/00881–T3) **An analysis of monojet data in $p\bar{p}$ collisions at $\sqrt{s}$ = 1.8 TEV.** Markeloff, R. Wisconsin Univ., Madison, WI (United States). 1992. 179p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76ER00881. Order Number DE94001822. Source: OSTI; NTIS; INIS; GPO Dep.

An analysis is presented of events with a single jet and significant missing transverse energy selected from 4.7 pb^{-1} of data collected at the Fermilab Tevatron with the CDF detector. The goal is to identify events of the type $p\bar{p} \rightarrow Z^0$ + jet; $Z^0 \rightarrow \nu\bar{\nu}$. Event selection and backgrounds are discussed. The number of observed monojet events is compared to the number of observed $Z^0 \rightarrow e^{+-}$ events in which the Z^0 is accompanied by a jet. We measure the number of light neutrino species to be $N_\nu = 2.2\pm1.5$ and we place an upper limit on the number of neutrino species at $N_\nu < 5$ (90% C.L.).

7619 (DOE/ER/00881–T5) **Properties of events containing a photon and several jets seen in $p\bar{p}$ collisions at $\sqrt{s}$ = 1.8 TeV.** Maas, P.A. Wisconsin Univ., Madison, WI (United States). 1993. 172p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76ER00881. Order Number DE94005596. Source: OSTI; NTIS; INIS; GPO Dep.

The CDF detector is used to investigate the properties of events containing a photon and two jets. The rate of photon +2 jet production is higher than the theoretical calculation, but the shape of the events agrees with QCD predictions.

7620 (DOE/ER/10629–T4) **A study of the decay $D^\circ \rightarrow K^-\pi^+\pi^\circ$ in high energy photoproduction.** Summers, D.J. (Univ. of California, Santa Barbara, CA (United States)); Bharadwaj, V.K.; Denby, B.H.; Eisner, A.M.; Lu, A.; Morrison, R.J.; Witherell, M.S.; Yellin, S.J.; Kennett, R.G.; Estabrooks, P.; Pinfold, J.; Bartlett, D.F.; Bhadra, S.; Duncan, A.L.;Oklahoma Univ., Norman, OK (United States). [1983]. 133p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AS05-80ER10629. Order Number DE94004874. Source: OSTI; NTIS; GPO Dep.

Results are presented from an experiment observing photoproduction of the D^* at an average energy of 103 GeV. Clean signals are seen for the decay $D^{*\pm} \rightarrow \pi^\pm D^0$ with the D^0 decaying into both $K^\mp\pi^\pm$ and $K^\mp\pi^\pm\pi^0$. Analysis of the Dalitz plot for the $K\pi\pi$ mode gives branching fractions for $K^-\rho^+$, $K^{*-}\pi^+$, and $\bar{K}^{*0}\pi^0$ final states. The observed branching fraction for $D^0 \rightarrow K^-\rho^+$, which is much lower than a previous result, is in approximate agreement with the value expected for an I = 1/2 final state.

7621 (DOE/ER/40445–43) **A search for the production of Direct Leptons in nucleon-nucleus and nucleus-nucleus collisions: Progress report, April 1, 1991–December 1, 1993.** Kirk, P.N. Louisiana State Univ., Baton Rouge, LA (United States). 15 Dec 1993. 31p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-88ER40445. Order Number DE94004640. Source: OSTI; NTIS; INIS; GPO Dep.

The purpose of this report is to describe activities performed by the Intermediate Energy Nuclear Physics Group (IENPG) at the Louisiana State University (LSU) under the terms of grant FG05-88ER40445. The report will cover, for the most part, the period of time between April 1, 1991, and the present. The principal focus of our activities is currently the muon subgroup of the PHENIX Collaboration. We are, however, in the process of concluding other activities, specifically our memberships in the Di-Lepton Spectrometer (DLS) Collaboration at LBL and the AMY Collaboration at KEK. These activities have been thoroughly discussed in previous progress reports and renewal proposals, and further discussion of these activities is possibly repetitious. However, this report has been prepared under the assumption that none of the referees with the exception of the grant monitor is familiar with the group or its previous work. Consequently we shall cite a few examples of our contributions to these collaborations when there seem to be valid reasons for so doing.

7622 (DOE/ER/40654–3) **Harvard University High Energy Physics: [Annual report, 1992–1993].** Harvard Univ., Cambridge, MA (United States). [1993]. 44p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER40654. Order Number DE94002406. Source: OSTI; NTIS; INIS; GPO Dep.

The mainly experimental research program in high energy physics at Harvard is summarized in a descriptive fashion according to the following outline: Proton–antiproton colliding beam program at Fermilab – CDF (forward/backward electromagnetic calorimeters – FEM, central muon extension – CMX, gas calorimetry and electronics development, front-end electronics upgrades, software development, physics analysis, timetable), electron – positron collisions in the upsilon region – CLEO (the hardware projects including CLEO II barrel TOF system and silicon drift detector R&D, physics analysis), search for ν_μ to ν_τ oscillations with the NOMAD experiment at CERN, the solenoidal detector collaboration at the SSC, muon scattering at FNAL – E665, the L3 experiment, and phenomenological analysis of high-energy $\bar{p}p$ cross sections. 149 refs.

7623 (DOE/ER/40685–759) **Theoretical and experimental studies of elementary physics: Annual technical progress report, November 1, 1992–October 31, 1993.** Bodek, A.; Ferbel, T.; Melissinos, A.C.; Slattery, P.; Tipton, P.; Das, A.; Hagen, C.R.; Rajeev, S.G.; Okubo, S.; Orr, L. Rochester Univ., NY (United States). Dept. of Physics and Astronomy. 1 May 1993. 166p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER40685. Order Number DE94002310. Source: OSTI; NTIS; INIS; GPO Dep.

The various components of the high-energy physics research program at the University of Rochester are presented. (I)Fixed-target experimentation at FNAL includes studies of direct photon production by p and π on H, Be, and Cu, and hybrid mesons and other physics issues in Coulomb excitation at high energies. (II)The status of the GEM (Gammas, Electrons, and Muons) Experiment at the SSC is given. (III)The D-Zero experiment at FNAL is reviewed. (IV)Deep inelastic lepton–nucleon scattering experiments are summarized: electron scattering experiments at SLAC, FNAL neutrino quad triplet runs, FNAL neutrino sign selected experiments, and SDC cosmic ray test and test beam calibration. (V)Studies of nonlinear QED at SLAC concentrated on a study of QED at critical field strength in intense laser–high-energy electron collisions. (VI)Development work on the Collider Detector at Fermilab (CDF) emphasized the CDF silicon vertex detector, the end plug calorimeter, and the SDC tile/fiber calorimetry. (VII)The theoretical physics effort is sketched.

7624 (FNAL/C–93/305) **A dependence of exclusive vector meson production in muon-nucleus scattering.** Fang, Guang Yin (Harvard Univ., Cambridge, MA (United States). Dept. of Physics). E665 Collaboration. Fermi National Accelerator Lab., Batavia, IL (United States). Oct 1993. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-930637–11: 13. international conference on particles and nuclei, Perugia (Italy), 27 Jun - 3 jul 1993). Order Number DE94003363. Source: OSTI; NTIS; INIS; GPO Dep.

Preliminary results on the cross section ratios of exclusive ρ^0 and ϕ meson production off carbon, calcium, and lead to that off deuterium in deep-inelastic muon-nucleon scattering are reported. The data were taken with the E665 spectrometer using the Fermilab Tevatron muon beam. The mean beam energy was 470 GeV. Significant increase in the cross section ratios is seen as the four-momentum squared of the virtual photon increases. The results support the idea of color transparency.

7625 (FNAL/C–93/313-E) **Measurement of the elastic, total and single diffraction cross sections at Tevatron energies.** Belforte, S. (Istituto Nazionale di Fisica Nucleare, Pisa (Italy)). CDF Collaboration. Fermi National Accelerator Lab., Batavia, IL (United States). Nov 1993. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-9306134–4: Conference on hadron, Como (Italy), 21-25 Jun 1993). Order Number DE94003618. Source: OSTI; NTIS; INIS; GPO Dep.

CDF collaboration has measured the differential elastic cross section $d\sigma_{el}/dt$, the single diffraction dissociation double differential cross section $d^2\sigma_{sd}/dM^2dt$ and the total inelastic cross section in antiproton-proton collisions at center of mass energies $\sqrt{s}$=546 and 1800 GeV. The elastic scattering slope is 15.28±0.58 (16.98±0.25) GeV^{-2} at $\sqrt{s}$ = 546 (1800) GeV. Using the luminosity independent method, $(1 + \rho^2)\sigma_T$ is measured to be 62.64±0.95 (81.83±2.29) mb at $\sqrt{s}$ = 546 (1800) GeV. Assuming ρ = 0.15, the elastic, total and signal diffraction cross sections are σ_{el} = 12.87±0.30, σ_T = 61.26±0.93 and σ_{sd} = 7.89±0.33 mb (σ_{el} = 19.70±0.85, σ_T = 80.03±2.24 and σ_{sd} = 9.46±0.44 mb) at 546 (1800) GeV.

7626 (FNAL/C–93/320-E) **New particle searches at CDF.** Cobal, M. (Istituto Nazionale di Fisica Nucleare, Pisa (Italy)). CDF Collaboration. Fermi National Accelerator Lab., Batavia, IL (United States). Nov 1993. 6p. Sponsored by USDOE, Washington, DC (United States);National Science Foundation, Washington, DC (United States);Istituto Nazionale di Fisica Nucleare, Rome (Italy);Ministry of Education, Science and Culture (Japan);Natural Sciences and Engineering Research DOE Contract AC02-76CH03000. (CONF-930761–3: International Europhysics conference on high-energy physics, Marseille (France), 22-28 Jul 1993). Order Number DE94003641. Source: OSTI; NTIS; INIS; GPO Dep.

We present a review of the search for new particles, such as leptoquarks, excited quarks, SUSY and top at CDF.

7627 (FNAL/C–93/328) **Heavy quark production and spectroscopy.** Appel, J.A. Fermi National Accelerator Lab., Batavia, IL (United States). Nov 1993. 22p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-930823–16: 16. international symposium on lepton and photon interactions, Ithaca, NY (United States), 10-15 Aug 1993). Order Number DE94003619. Source: OSTI; NTIS; INIS; GPO Dep.

This review covers many new experimental results on heavy flavor production and spectroscopy. It also shows some of the increasingly improved theoretical understanding of results in light of basic perturbative QCD and heavy quark symmetry. At the same time, there are some remaining discrepancies among experiments as well as significant missing information on some of the anticipated lowest lying heavy quark states. Most interesting, perhaps, are some clearly measured production effects awaiting full explanation.

7628 (FNAL/C–93-329-E) **Top quark search at CDF.** Benlloch, J.M. (Massachusetts Inst. of Technology, Cambridge, MA (United States)). CDF Collaboration. Fermi National Accelerator Lab., Batavia, IL (United States). Nov 1993. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-9305311–1: New physics in new experiments meeting, Kazimierz (Poland), May 1993). Order Number DE94003643. Source: OSTI; NTIS; INIS; GPO Dep.

The current status of the Top quark search at CDF is presented. A lower limit on the Top mass of 113 GeV has been established using the dilepton channel with the data collected during the 1988–1989 and 1992–1993 runs at $\sqrt{s}$= 1.8 TeV. Prospects for Top quark discovery during the 1993–1994 run are also outlined.

7629 (FNAL/C–93/330-E) **Photon and hadron production of heavy flavors.** DeJongh, F. Fermi National Accelerator Lab., Batavia, IL (United States). Nov 1993. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-9307143–6: 5. international symposium on heavy flavor physics, Montreal (Canada), 6-10 Jul 1993). Order Number DE94004655. Source: OSTI; NTIS; INIS; GPO Dep.

Recent experiments have obtained large clean samples of charmed and bottom hadrons, and have measured both single-quark inclusive cross-sections and quark-antiquark correlations. Predictions for these production properties are available from next-to-leading order QCD. We review recent results from fixed target hadroproduction of charm and bottom, fixed target photoproduction of charm, and production of bottom at proton-antiproton colliders.

7630 (FNAL/C–93/333) **Heavy flavor production at fixed target photo- and hadroproduction.** Kwan, S. Fermi National Accelerator Lab., Batavia, IL (United States). Nov 1993. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-9309292–3: Advanced study conference on heavy flavours, Pavia (Italy), 3-7 Sep 1993). Order Number DE94004651. Source: OSTI; NTIS; INIS; GPO Dep.

Recent results on photo- and hadroproduction of heavy flavor particles from fixed target experiments at CERN and Fermilab are presented. These include results on production characteristics, cross-section and pair correlation for both charm and beauty mesons.

7631 (FNAL/C–93.345-E) **Jet production in muon scattering at Fermilab E665.** Salgado, C.W. E665 Collaboration. Fermi National Accelerator Lab., Batavia, IL (United States). Nov 1993. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-9309297–1: 23. international symposium on multiparticle dynamics, Aspen, CO (United States), 13-17 Sep 1993). Order Number DE94004663. Source: OSTI; NTIS; INIS; GPO Dep.

Measurements of multi-jet production rates from Muon-Nucleon and Muon-Nuclei scattering at Fermilab-E665 are presented. Jet rates are defined by the JADE clustering algorithm. Rates in Muon-Nucleon deep-inelastic scattering are compared to Monte Carlo model predictions. Preliminary results from jet production on heavy targets, in the shadowing region, show a higher suppression of two-forward jets as compared to one-forward jet production.

7632 (FNAL/C–93/347-E) **Search for excited quarks in $p\bar{p}$ collisions at $\sqrt{s}$ = 1.8 TeV.** Kephart, R.D. CDF Collaboration. Fermi National Accelerator Lab., Batavia, IL (United States). Nov 1993. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-9310247–1: 9. workshop on proton-antiproton collider physics, Tsukuba (Japan), 18-22 Oct 1993). Order Number DE94004658. Source: OSTI; NTIS; INIS; GPO Dep.

If quarks are composite particles then excited states are expected. We have searched in $p\bar{p}$ collisions for excited quarks (q^*) which decay to common quarks by emitting a W boson ($q^* \rightarrow qW$) or a photon ($q^* \rightarrow q\gamma$). The simplest model of excited quarks has been excluded for mass $M^* < 540$ GeV/c^2 at 95% confidence level.

7633 (FNAL/C–93/349-E) **A search for rapidity gap events in $p\bar{p}$ collisions at D0.** Streets, K.T. (Maryland Univ., College Park, MD (United States)). D0 Collaboration. Fermi National Accelerator Lab., Batavia, IL (United States). Nov 1993. 4p. Sponsored by USDOE, Washington, DC (United States);National Science Foundation, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-930761–6: International Europhysics conference on high-energy physics, Marseille (France), 22-28 Jul 1993). Order Number DE94004654. Source: OSTI; NTIS; INIS; GPO Dep.

Preliminary results from a search for jet events with rapidity gaps are presented. These events were produced in $p\bar{p}$ interactions at $\sqrt{s}$ = 1.8 TeV and measured with the Dv detector at Fermilab. The fraction of events with a rapidity gap is measured as a function of the pseudo-rapidity difference between the cone edges of the two leading jets ($\Delta\eta_c$). An upper limit on the fraction of events with no particles between jets is measured at 0.0093 at a 90% confidence level for events with $\Delta\eta_c > 3$ and jet transverse energies greater than 30 GeV.

7634 (FNAL/C–93/352-E) **B production and $B^0\bar{B}^0$ mixing at D0.** Denisov, D. (Superconducting Super Collider Lab., Dallas, TX (United States)). D0 Collaboration. Fermi National Accelerator Lab., Batavia, IL (United States). Nov 1993. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-9309292–2: Advanced study conference on

heavy flavours, Pavia (Italy), 3-7 Sep 1993). Order Number DE94004664. Source: OSTI; NTIS; INIS; GPO Dep.

Preliminary results on B physics studies from the D0 experiment at the Fermilab collider are presented. Single and dimuon events produced in $p\bar{p}$ collisions at $\sqrt{s}$ = 1.8 TeV were used in the analysis. Inclusive single muon and J/Ψ differential cross sections are shown. The results of a measurement of the time averaged $B^0\bar{B}^0$ to mixing parameter are presented.

7635 (FNAL/C–93/358-E) **Measurement of the elastic, total and diffraction cross sections at tevatron energies.** Belforte, S. (Istituto Nazionale di Fisica Nucleare, Pisa (Italy)). CDF Collaboration. Fermi National Accelerator Lab., Batavia, IL (United States). Nov 1993. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-930761–5: International Europhysics conference on high-energy physics, Marseille (France), 22-28 Jul 1993). Order Number DE94004659. Source: OSTI; NTIS; INIS; GPO Dep.

The CDF collaboration has measured the differential elastic cross section $d\sigma_{el}/dt$, the single diffraction dissociation double differential cross section $d^2\sigma_{sd}/dM^2dt$ and the total inelastic cross section for antiproton-proton collisions at center of mass energies $\sqrt{s}$ = 546 and 1,800 GeV. Data for this measurement have been collected in short dedicated runs during the 1988–1989 data taking period of CDF. The elastic scattering slope is 15.28 ± 0.58 (16.98 ± 0.25) GeV^{-2} at $\sqrt{s}$ = 546 (1,800) GeV. Using the luminosity independent method $(1 + \rho^2)\sigma_T$ is measured to be 62.64 ± 0.95 (81.83 ± 2.29) mb at $\sqrt{s}$ = 546 (1,800) GeV. Assuming ρ = 0.15 the elastic, total and single diffraction cross sections are σ_{el} = 12.87 ± 0.30, σ_T = 61.26 ± 0.93 and σ_{sd} = 7.89 ± 0.33 mb (σ_{el} = 19.70 ± 0.85, σ_T = 80.03 ± 2.24 and σ_{sd} = 9.46 ± 0.44 mb) at $\sqrt{s}$ = 546 (1,800) GeV.

7636 (FNAL/C–93/363-E) **Search for the top quark in the single lepton + jets channel at D0.** Greenlee, H.B. D0 collaboration. Fermi National Accelerator Lab., Batavia, IL (United States). Nov 1993. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-9310247–3: 9. workshop on proton-antiproton collider physics, Tsukuba (Japan), 18-22 Oct 1993). Order Number DE94004660. Source: OSTI; NTIS; INIS; GPO Dep.

We have searched for standard model top quark pair production at $\sqrt{s}$ = 1.8 TeV. We present preliminary results of searches in the single lepton decay modes (i.e. where one top quark decays semileptonically to an electron or a muon and the other top quark decayed hadronically). We do not find evidence for top quark production in these decay channels. By combining this negative result with our negative result from the dilepton decay channels, we obtain a 95% confidence level upper limit on the top quark production cross section for top masses between 80 and 140 GeV/c^2. By comparing this cross section upper limit curve with a theoretical production cross section we obtain a lower limit on the top quark mass of 124 GeV/c^2.

7637 (IC–93/221) **On the corrections to pole dominance in B → πlν.** Paver, N. (Trieste Univ. (Italy). Ist. di Fisica Teorica); Riazzudin. International Centre for Theoretical Physics, Trieste (Italy). Aug 1993. 8p. (UTS-DFT–93-20.). Order Number DE94611208. Source: OSTI; NTIS (US Sales Only); INIS.

In the framework combining the heavy quark expansion and chiral symmetry for light quarks, we identify a class of corrections to the dominant vector meson pole diagram for B → πlν, in the vicinity of the zero pion recoil point. We also give a qualitative estimate of these effects, using higher states exchanges with couplings constrained by current algebra and PCAC. (author). 12 refs, 1 fig.

7638 (IC–93/231) **Decay of the D_s-meson.** Duong Van Phi (International Centre for Theoretical Physics, Trieste (Italy)); Duong Anh Duc. International Centre for Theoretical Physics, Trieste (Italy). Aug 1993. 9p. Order Number DE94611209. Source: OSTI; NTIS (US Sales Only); INIS.

The decay channels of the D_s-meson are deduced from a Selection Rule and a Lagrangian, formed on L*O(4) group invariance and on principle of minimal structure. A comparison of the results with experimental data is made. (author). 4 refs.

7639 (IHEP-OMMS–92-52) **Angular dependence of parton-parton scattering extracted from hadron pair production in pp collisions at $\sqrt{s}$=11.5 GeV.** Volkov, A.A. (and others); Kostritskij, A.V.; Abramov, V.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (Russian Federation). Inst. Fiziki Vysokikh Ehnergij. 1992. 6p. Order Number DE94611174. Source: OSTI; NTIS (US Sales Only); INIS.

The angular dependence of symmetrical hadron pair production cross section with effective mass in the range of 2.95-4.7 GeV/c^2 is measured with a GCD-based calculations double arm spectrometer. The results are compared to calculations based on QCD. 12 refs.; 1 fig.

7640 (IS-T–1654) **A measurement of the (τ) polarization at the Z resonance with the DELPHI detector at LEP.** Wong Chan, A. Ames Lab., IA (United States). Jul 1993. 148p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-82. Order Number DE94005557. Source: OSTI; NTIS; INIS; GPO Dep.

The polarization of τ leptons produced in the reaction $e^+e^- \rightarrow \tau^+\tau^-$ near the peak of the Z^o resonance has been measured using a sample of 24904 $\tau^+\tau^-$ events, with an estimated background of 1.5%. We have selected 4562 $\tau \rightarrow e\nu\bar{\nu}$ 2218 $\tau \rightarrow \pi\nu$ and 5133 $\tau \rightarrow \rho\nu$ candidates. The mean value obtained is $P_\tau = -0.176 \pm 0.029$. This corresponds to a ratio of the neutral current vector to the axial-vector coupling constants of the τ lepton of $g_V^\tau/g_A^\tau = 0.088 \pm 0.014$. This leads to a value of the electroweak mixing angle of $\sin^2\theta_W = 0.2280 \pm 0.0036$. This result is in good agreement with previous measurements of the weak mixing angle from the study of the Z^o lineshape and the forward-backward asymmetries in the processes $Z^o \rightarrow l^+l^-$ and $Z^o \rightarrow q\bar{q}$.

7641 (JINR-E–2-92-115) **Form factors of the decay D+->antiK*0e+νe.** Volkov, M.K. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1992. 10p. Order Number DE94611210. Source: OSTI; NTIS (US Sales Only); INIS.

Simple phenomenological estimates of the vector V(0) and axial $A_1(0)$ and $A_2(0)$ form factors of the D+->anti*0e+νe decay are made in the model of the Nambu-Jona-Lasinio type. The obtained form factors agree with the experimental data. 21 refs.; 2 figs.; 1 tab.

7642 (JINR-R–2-92-217) **Proton elecromagnetic form factor near PantiP threshold.** Meshcheryakov, V.A.; Meshcheryakov, G.V. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1992. 7p. (In Russian). Order Number DE94611221. Source: OSTI; NTIS (US Sales Only); INIS.

The influence of the PantiP-state in the unitarity condition on the behaviour of the proton form factor in the time-like region is considered. 16 refs.; 2 figs.; 1 tab.

7643 (Juel–2733) **The elastic pion-nucleon interaction in the meson exchange picture.** Schuetz, C. Forschungszentrum Juelich GmbH (Germany). Inst. fuer Kernphysik. Feb 1993. 98p. (In German). Order Number DE94734009. Source: OSTI; NTIS (US Sales Only); INIS.

We report a meson exchange model of pion-nucleon interaction, which has recently been developed by our group. Apart from direct and exchange nucleon and delta pole diagrams the Born term of this model includes potentials for the correlated exchange of two pions in the 0^+ ('σ') and 1^- (ρ) channels. These 2π-exchange potentials are calculated from partial wave amplitudes for the reaction N anti N → ππ using the technique of dispersion integrals. Our 2π-exchange potentials are compared with potentials derived from the exchange of 'σ'- and ρ-mesons in conventional meson exchange models, in which the mass distribution of the exchanged 2π-system is neglected. By an investigation of the characteristic differences of these potentials we show that the realistic treatment of correlated 2π-exchange is of crucial importance for the quantitative description of πN scattering data obtained in our model. The rise of the P_{11} phase shift is reproduced without an explicit pole term involving the N*. The description of this partial wave is based on the cancellation between the strong attraction from correlated 2π-exchange and a repulsive contribution from the nucleon pole term. (orig.)

7644 (LA–12635-T) **A photon detector system for the search for the rare muon decay $\mu \rightarrow e\gamma$.** Van Ausdeln, L.A. Los Alamos National Lab., NM (United States). Nov 1993. 162p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE94003537. Source: OSTI; NTIS; INIS; GPO Dep.

Thesis submitted to Texas A&M University, College Station, TX.

An innovative and state of the art pair spectrometer system to measure the photon component of μ^+ decay to obtain an improved branching ratio limit for the decay $\mu \rightarrow e\gamma$ is investigated. Analysis algorithms are developed and an experimental inner bremsstrahlung spectrum is obtained and agrees well with Monte Carlo simulations. Background sources are investigated and found to be highly suppressed at various stages of acquisition and analysis.

7645 (LA–12663-T) **Reaction $\pi N \rightarrow \pi\pi N$ near threshold.** Friez, E. Los Alamos National Lab., NM (United States). Nov 1993. 278p. Sponsored by USDOE, Washington, DC (United States);National Science Foundation, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE94003895. Source: OSTI; NTIS; INIS; GPO Dep.

Thesis submitted to University of Virginia, Dept. of Physics, Charlottesville, VA.

The LAMPF E1179 experiment used the π^0 spectrometer and an array of charged particle range counters to detect and record $\pi^+\pi^0$, $\pi^0 p$, and $\pi^+\pi^0 p$ coincidences following the reaction $\pi^+ p \rightarrow \pi^0\pi^+ p$ near threshold. The total cross sections for single pion production were measured at the incident pion kinetic energies 190, 200, 220, 240, and 260 MeV. Absolute normalizations were fixed by measuring $\pi^+ p$ elastic scattering at 260 MeV. A detailed analysis of the π^0 detection efficiency was performed using cosmic ray calibrations and pion single charge exchange measurements with a 30 MeV π^- beam. All published data on $\pi N \rightarrow \pi\pi N$, including our results, are simultaneously fitted to yield a common chiral symmetry breaking parameter $\xi = -0.25 \pm 0.10$. The threshold matrix element $|\alpha_0(\pi^0\pi^+ p)|$ determined by linear extrapolation yields the value of the s-wave isospin-2 $\pi\pi$ scattering length $\alpha_0{}^2(\pi\pi) = -0.041 \pm 0.003\ m_\pi{}^{-1}$, within the framework of soft-pion theory.

7646 (LBL–34726) **The STAR experiment at the Relativistic Heavy Ion Collider.** Harris, J.W. STAR Collaboration. Lawrence Berkeley Lab., CA (United States). Sep 1993. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-930636–9: 10. international conference on ultra-relativistic nucleus-nucleus collisions, Borlaenge (Sweden), 20-24 Jun 1993). Order Number DE94003409. Source: OSTI; NTIS; INIS; GPO Dep.

The STAR experiments will concentrate on measurements of hadron production over a large solid angle to be able to study observables on an event-by-event basis. STAR will search for signatures of QGP formation and investigate the behavior of strongly interacting matter at high energy density. Since there is no single definitive signature for the QGP, it is essential to use a flexible detection system at RHIC. STAR will simultaneously measure many experimental observables to study signatures of the phase transition and the space-time evolution of the collision process. This requires an understanding of the microscopic structure of hadronic interactions, at the level of quarks and gluons, at high energy densities. The experiment will utilize two aspects of hadron production that are fundamentally new at RHIC: correlations between global observables on an event-by-event basis and the use of hard scattering of partons as a probe of the properties of high density nuclear matter.

7647 (LBL–34738) **Properties of W + jet events in proton-antiproton collisions at 1.8 TeV.** Drucker, R.B. (Lawrence Berkeley Lab., CA (United States)). CDF Collaboration. Lawrence Berkeley Lab., CA (United States). 22 Nov 1993. 189p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE94004002. Source: OSTI; NTIS; INIS; GPO Dep.

W boson + QCD Jet events, produced in 1.8 TeV proton-antiproton collisions and measured by the Collider Detector at Fermilab (CDF), were used to measure the center-of-mass production angle of the W + jet system, and were also used to place limits on the production of excited quark states. The center-of-mass production angular distribution agrees well with leading order and next-to-leading order QCD predictions. Excited quark states were searched for in the reaction $q + g \rightarrow q^* \rightarrow q + W$. Upper limits on the q^* cross section, as a function of the q^* mass, are shown. Comparison with a theoretical prediction for q^* production excludes excited quark states with a mass in the range 150–530 GeV/c^2, at 95% confidence.

7648 (LIYaF–1765) **Limitation on the magnetic dipole moment of the reactor neutrino.** Derbin, A.V. AN SSSR, Leningrad (Russian Federation). Inst. Yadernoj Fiziki. Jan 1992. 16p. (In Russian). Order Number DE94611171. Source: OSTI; NTIS (US Sales Only); INIS.

Results of experiments on elastic scattering of reactor neutrino on electron are presented. Limitation on the magnetic moment of neutrino $\mu_\nu < 1.8 \times 10^{-10}\ \mu_B$ was obtained. The existing uncertainty in the neutrino spectrum confines the possible limit on magnetic moment of $\approx 3 \times 10^{-11}\ \mu_B$ value for detectors with $\approx$0.1 MeV threshold. 26 refs.; 5 figs.; 1 tab.

7649 (SLAC-PUB–6096) **A study of LPM suppression of bremsstrahlung at 25 GeV.** Anthony, P. (Lawrence Livermore National Lab., CA (United States)); Becker-Szendy, R.; Bosted, P. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Mar 1993. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-930779–18: International cosmic-ray conference, Calgary (Canada), 19-20 Jul 1993). Order Number DE94003457. Source: OSTI; NTIS; INIS; GPO Dep.

We are making an accurate measurement of the LPM suppression of bremsstrahlung with 25 GeV electrons. By using a 120 pulses per second beam, a precise BGO calorimeter, and spectrometer to tag the outgoing electrons, we are able to make an accurate measurement of the bremsstrahlung photons in the 0-400 MeV region, where the Bethe Heitler and LPM predictions differ. We are taking data with targets made of carbon, uranium, tungsten and iron, with thicknesses in the 2% to 6% X_0 range. In addition, we are taking data with two very thin gold targets. The latter have thicknesses that are comparable to or less than the LPM formation zone length, and so should not exhibit LPM suppression. We are also studying photons of a few MeV in energy, to test the closely related longitudinal density effect predicted by Ter-Mikaelian in which very low energy photon emission is suppressed due to dielectric effects of the medium.

7650 (SLAC-PUB–6292) **A measurement of $R_b = \Gamma(Z^0 \rightarrow b\bar{b})/\Gamma(Z^0 \rightarrow$ hadrons) at SLD.** SLD Collaboration. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Sep 1993. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-930823–15: 16. international symposium on lepton and photon interactions, Ithaca, NY (United States), 10-15 Aug 1993). Order Number DE94003446. Source: OSTI; NTIS; INIS; GPO Dep.

A measurement of the ratio $R_b = \Gamma(Z^0 \rightarrow b\bar{b})/\Gamma(Z^0 \rightarrow$ hadrons) is reported. This measurement is made using the CCD-based vertex detector of the SLD detector at the SLAC Linear Collider. Efficient tagging of $b\bar{b}$ events is performed with an impact parameter technique that takes advantage of the small and stable interaction point of the SLC and all charged tracks in Z^0 decays. In a sample of 27K Z^0 events, a value $R_b = 0.235 \pm 0.006 \pm 0.018$ is obtained.

7651 (SLAC-PUB–6362) **A study of jet handedness at the Z^0 resonance.** Masuda, H. SLD Collaboration. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Oct 1993. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-930761–2: International Europhysics conference on high-energy physics, Marseille (France), 22-28 Jul 1993). Order Number DE94003450. Source: OSTI; NTIS; INIS; GPO Dep.

We present a preliminary study of jet handedness is hadronic decays of Z^0 bosons measured in the SLD experiment at the SLAC Linear Collider (SLC). Following the proposal of Nachtman and Efremov et al., we defined a scalar quantity for each hadronic jet

and measured the sign asymmetry (jet handedness) of this quantity for samples of quark jets and antiquark jets, which are expected to be oppositely polarized in Z^0 decays. From our preliminary study, no evidence for a significantly non-zero handedness was observed. Assuming standard model values of quark polarizations, we set an upper limit on the analyzing power of our handedness method.

7652 (SLAC-PUB–6378) **A measurement of the LMP effect.** Klein, S.R. (California Univ., Santa Cruz, CA (United States). Inst. for Particle Physics); Anthony, P.; Becker-Szendy, R. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Nov 1993. 16p. Sponsored by USDOE, Washington, DC (United States);National Science Foundation, Washington, DC (United States). DOE Contract AC03-76SF00515 ; W-7405-ENG-48. NSF-PHY-9113428; NSF-PHY-9114958. (CONF-930823–18: 16. international symposium on lepton and photon interactions, Ithaca, NY (United States), 10-15 Aug 1993). Order Number DE94005225. Source: OSTI; NTIS; INIS; GPO Dep.

We have performed an experiment to measure accurately the Landau-Pomeranchuk-Migdal (LPM) effect in the production of 5 to 500 MeV photons due to bremsstrahlung of 8 and 25 GeV electron beams traversing thin (2 to 6% X_0) targets of varying densities. Our measurements confirm that the LPM effect exists and that the Migdal calculations are accurate. We see that, for thin targets, LPM suppression disappears leaving a Bethe-Heitler spectrum, as predicted by theory. For intermediate target thicknesses, we lack an acceptable theory, but have measured energy spectra for targets of differing thickness. We have also measured the production rate of 500 keV to 5 MeV photons at the same electron energies, to study dielectric suppression. We see qualitative agreement with the theory of Ter-Mikaelian; more work is needed before we can make quantitative comparisons.

The top group studied discovery issues as well as measurements to be made at the Tevatron, the LHC and the SSC.

7655 (ANL-HEP-CP–93-102) **Matrix elements for the decays of S- and P-wave quarkonium: An exploratory study.** Bodwin, G.T.; Kim, S.; Sinclair, D.K. Argonne National Lab., IL (United States). Nov 1993. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9310250–3: LATTICE 93: international symposium on lattice field theory, Dallas, TX (United States), 12-17 Oct 1993). Order Number DE94005127. Source: OSTI; NTIS; INIS; GPO Dep.

Bodwin, Braaten and Lepage have shown that, in a non-relativistic expansion in powers of the heavy-quark velocity, the decay rates of S- and P-wave quarkonia can be written as sums of products of a hard parton matrix element, which can be calculated perturbatively, times a low-momentum expectation value of a parton operator in the quarkonium state. We report on attempts to calculate these low momentum matrix elements on the lattice in the non-relativistic formulation of the quark dynamics. The quenched approximation is used throughout.

7656 (CONF-9306260–5) **Signatures for hybrids.** Barnes, T. (Oak Ridge National Lab., TN (United States)). Oak Ridge National Lab., TN (United States). [1993]. 13p. Sponsored by US-DOE, Washington, DC (United States);Science and Engineering Research Council, Swindon (United Kingdom). DOE Contract AC05-84OR21400. From Conference on exclusive reactions at high momentum transfer; Elba (Italy); 24-26 Jun 1993. Order Number DE94004244. Source: OSTI; NTIS; INIS; GPO Dep.

In this review talk I summarize theoretical expectations for properties of hybrid mesons and baryons, and discuss the prospects for identifying these states experimentally.

7657 (FNAL/C–93/319-E) **B-lifetime measurements at the tevatron.** Wenzel, H. (Fermi National Accelerator Lab., Batavia, IL (United States)). CDF Collaboration. Fermi National Accelerator Lab., Batavia, IL (United States). Nov 1993. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. During the run period from May 1992 to begin of June 1993 the Collider Detector at Fermilab (CDF) has recorded $\approx$ 21.4 pb^{-1} of $p\bar{p}$ collider data at $\sqrt{s}$ = 1.8 TeV. For this run the detector had been upgraded which significantly enhanced its b-physics capabilities. The upgrades include a high precision Silicon VerteX detector (SVX) which enables CDF to reconstruct the decay vertex and decay length of b-hadrons. In this article the author reports on several measurements of the lifetime of b-flavored hadrons. The determination of the average b-lifetime using inclusive J/ψ's, the measurement of the $B^{\pm}$ and B^0 lifetimes by reconstructing exclusive final states including a J/ψ or $\psi(2S)$ and a measurement of the $B_s{}^0$ meson lifetime exploiting the decay: $B_s \rightarrow l\nu D_s{}^+ \rightarrow l\nu\phi\pi^+ \rightarrow l\nu K^+K^-\pi^+$.

7658 (FNAL/C–93/355-E) **A measurement of the W mass using electrons at CDF.** Saltzberg, D. (Chicago Univ., IL (United States). Enrico Fermi Inst.). CDF Collaboration. Fermi National Accelerator Lab., Batavia, IL (United States). Nov 1993. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-9310247–2: 9. workshop on proton-antiproton collider physics, Tsukuba (Japan), 18-22 Oct 1993). Order Number DE94004656. Source: OSTI; NTIS; INIS; GPO Dep.

We present a preliminary measurement of the mass of the boson using electron data from the 1992-93 collider run at the Fermilab Tevatron. The result is Mw = 80.47 $\pm$ 0.15 (stat) $\pm$ 0.25 (syst.) GeV. Current predictions agree with this value.

7659 (IC–93/242) **Calculations on some properties of the pion in the framework of Schwinger-Dyson and Bethe-Salpeter equations.** Wan Shaolong (International Centre for Theoretical Physics, Trieste (Italy)); Wang Kelin. International Centre for Theoretical Physics, Trieste (Italy). Aug 1993. 28p. Order Number DE94611232. Source: OSTI; NTIS (US Sales Only); INIS.

A phenomenological potential model, the modified flat-bottom potential, is assumed according to the flat-bottom potential and some physical considerations for the infrared and ultraviolet asymptotic behaviours of the effective quark-gluon coupling. Then, the propagator functions and mass function for the quark, and the Bethe-Salpeter wave functions, mass, electromagnetic form factor, radius and decay constant for the pion are calculated numerically in the framework of the Schwinger-Dyson and Bethe-Salpeter equations with the modified flat-bottom potential. In order to obtain these, the Schwinger-Dyson and Bethe-Salpeter equations in the modified flat-bottom potential model are solved simultaneously by numerical iteration in the ladder approximation, and without any further one. Our results for the asymptotic quark mass function and the bound state wave functions agree with those derived from other theories and for the electromagnetic form factor, mass,

radius and decay constant of the pion agree with experimental results, respectively. (author). 14 refs, 9 figs.

7660 (IHEP-OTF–92-53) **Isoscalar vector bosons at LEP 2.** Gershtejn, S.S.; Likhoded, A.A.; Obraztsov, V.F.; Shevlyagin, M.V.; Yushchenko, O.P. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (Russian Federation). Inst. Fiziki Vysokikh Ehnergij. 1992. 18p. Order Number DE94611253. Source: OSTI; NTIS (US Sales Only); INIS.

The phenomenological manifestations of the additional $Y(Y_L)$ boson arising in the models with the composite structure of electroweak interactions are studied for the process $e^+e^- \rightarrow ff$-bar and $e^+e^- \rightarrow W^+W^-$ at the LEP 2 energies. It is shown that the inclusion of the additional isoscalar boson with the parameters providing the explanation of the TRISTAN data yields a measurable effect ($\approx$ tens of per cent) in the cross-section of $e^+e^- \rightarrow \mu^+\mu^-$ (hadrons) processes at energies $\sqrt{s}$=160-200 GeV. A contribution of the additional boson in the cross-section of the $e^+e^- \rightarrow W^+W^-$ process in negligible ($\leq$0.5%) at these energies. 19 refs.

7661 (INP-MSU–92-42-291) **Reconstruction of spectral density and gluon condensate fitting from the two-loop correction to the coefficient function.** Bajkov, P.A.; Il'in, V.A.; Smirnov, V.A. Moskovskij Gosudarstvennyj Univ., Moscow (Russian Federation). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki. 1992. 13p. (NIIYaF-MGU–92-42-291.). Order Number DE94611254. Source: OSTI; NTIS (US Sales Only); INIS.

The spectral density in the integral representation for the gluon condensate coefficient function up to two-loop level is constructed. Using this representation, the gluon condensate value (from charmonium spectroscopy experimental data) is re-estimated and concluded that this value is approximately two times greater than the one-loop effective value. 9 refs.

Simple arguments are given for the explanation of the gross structure of the spectrum of baryon resonances based on the scaling analysis. 20 refs.; 2 figs.; 3 tabs.

7663 (JINR-R–2-92-162) **Maxwell equations and Doppler effect for an electron.** Klenin, B.A. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Reactions. 1992. 15p. (In Russian). Order Number DE94611246. Source: OSTI; NTIS (US Sales Only); INIS.

On the basis of the Maxwell equations for the elecromagnetic field in vacuum and the Newton-Lorentz equation of motion the Doppler effect for an electron is received, characterizing the electron wave properties, which results relativistic Lorentz transformations of the special relativity theory. 4 refs.

7664 (KFKI–1993-13/A) **Exotic heavy baryons at LHC.** Biro, T.S. (Giessen Univ. (Germany)); Zimanyi, J. Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Jun 1993. 14p. Order Number DE94611227. Source: OSTI; NTIS (US Sales Only); INIS.

A heavy bottom-charm six-quark baryon is considered. A semiclassical and a Gaussian estimate show that the octet-octet bbb-ccc configuration can be favoured energetically rather than the singlet-singlet one. This result suggests that a confined bbb-ccc six-quark state may exist. Such objects may be produced in suitable amounts by heavy-ion collisions at Large Hadronic Collider energies. (R.P.) 8 refs. 1 fig.

7665 (SLAC-PUB–6316) **The $\Delta(1232)$ resonance transition form factor.** Staurt, L.M. (California Univ., Davis, CA (United States)); Bosted, P.E.; Lung, A. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Aug 1993. 4p. Sponsored by USDOE, Washington, DC (United States);National Science Foundation, Washington, DC (United States);United States-Israel Binational Science Foundation, Jerusalem (Israel). DOE Contract AC03-76SF00515 ; W-7405-ENG-48 ; FG02-88ER40415 ; AC02-76ER13065 ; FG06-90ER40537. Grants PHY-87-15050; 27; PHY–88-19259; PHY-86-581. (CONF-9306260–3: Conference on exclusive reactions at high momentum transfer, Elba (Italy), 24-26 Jun 1993). Order Number DE94003442. Source: OSTI; NTIS; INIS; GPO Dep.

Old and new measurements of inclusive e–p cross sections in the $\Delta(1232)$ resonance region have been combined, and a global data fit has been made. Using this fit to parameterize the nonresonant background, the transition form factors have been extracted out to a four-momentum transfer, Q^2, of 9.8 $(GeV/c)^2$. The results are systematically higher than those from a previous analysis, but agree within errors. A similar analysis has been done with e–d cross sections, and σ_n/σ_p in the $\Delta(1232)$ resonance region has been extracted out to a Q^2 of 7.9 $(GeV/c)^2$. σ_n/σ_p for $\Delta(1232)$ production is consistent with unity, while σ_n/σ_p for the nonresonant background is constant with Q^2 at approximately 0.4.

7666 (SLAC-PUB–6329) **Determination of the neutron spin-structure function.** Petratos, G.G. SLAC E-142 Collaboration. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Oct 1993. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-930637–13: 13. international conference on particles and nuclei, Perugia (Italy), 27 Jun - 3 jul 1993). Order Number DE94005234. Source: OSTI; NTIS; INIS; GPO Dep.

The neutron spin-structure function g_1^n has been determined by measuring the asymmetry in deep inelastic scattering of polarized electrons off a polarized ^{3}He target. The results are interpreted in the quark-parton model and used, in conjuction with earlier proton results, to test the Bjorken sum rule.

7667 (SLAC-PUB–6340) **High energy parton-parton elastic scattering in QCD.** Tang, W.K. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Aug 1993. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9306221–9: 19 international conference on elastic and diffractive scattering (5th Blois workshop), Providence, RI (United States), 8-12 Jun 1993). Order Number DE94003432. Source: OSTI; NTIS; INIS; GPO Dep.

We show that the high energy limit of quark-quark, or gluon-gluon, elastic scattering is calculable in terms of the BFKL pomeron when $-t \gg \Lambda_{QCD}^2$. Surprisingly, this on-shell amplitudes does not have infrared divergences in the high energy limit.

7668 (SLAC-PUB–6347) **Results on structure functions from fixed-target experiments.** Hughes, E. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Sep 1993. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9306251–2: Conference on physics in collision, Heidelberg (Germany), 16-18 Jun 1993). Order Number DE94005233. Source: OSTI; NTIS; INIS; GPO Dep.

A review of proton and neutron structure function measurements fro fixed-target experiments is presented. Results on unpolarized structure functions have stabilized for $\chi > 0.1$, and new results on lower χ measurements are appearing. Recent results on the measurement of the neutron spin structure function are given and discussed in relation to previous surprising results from the proton spin structure function measurement.

7669 (SLAC-PUB–6354) **Energy distribution of the leptons in top decay to charged Higgs.** Pomarol, A. (California Univ., Santa Cruz, CA (United States). Inst. for Particle Physics); Schmidt, C.R. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Sep 1993. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9306176–22: Workshop on physics at current accelerators and the supercollider, Argonne, IL (United States), 2-5 Jun 1993). Order Number DE94005231. Source: OSTI; NTIS; INIS; GPO Dep.

We analyze the energy, distribution of the leptons coming from the top decay $t \rightarrow bH^+$, $bW^+ \rightarrow bl^+\nu$. The correlation between the lepton energy distribution and the top spin may be useful for distinguishing the H^+ signature from the W background. Such a correlation can also be useful for disentangling the two different $H^+\bar{t}b$ couplings and determining the experimental value of tan β.

7672 (BNL–49621) **Recent results and directions in hypernuclear and Kaon physics.** May, M. Brookhaven National Lab., Upton, NY (United States). [1993]. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-930637–12: 13. international conference on particles and nuclei, Perugia (Italy), 27 Jun - 3 jul 1993). Order Number DE94003991. Source: OSTI; NTIS; INIS; GPO Dep.

This paper presents recent data and future plans for experiments at Brookhaven National Laboratory on hypernuclei and related topics. It will discuss experiment which put a single strange quark in the nucleus and an experiment to produce nuclei containing two strange quarks ($\Lambda\Lambda$ hypernuclei).

7673 (CONF-9305314–1) **Investigation of giant resonances via photon decay.** Varner, R.L. (Oak Ridge National Lab., TN (United States)); Beene, J.R.; Bertrand, F.E. Oak Ridge National Lab., TN (United States). 1 Nov 1993. 19p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From 2. two-arm photon spectrometer (TAPS) workshop; Guardamar (Spain); 31 May - 5 jun 1993. Order Number DE94004795. Source: OSTI; NTIS; INIS; GPO Dep.

We describe some investigations into properties of giant resonances using elastic scattering of fast heavy-ion beams and the coincident detection of the gamma decay of the excited nucleus, using the TAPS array at GANIL. The particular experiments described are the identification of multiphoton giant resonance states and the measurement of projectile excitation, using the KVI forward wall detector.

7674 (CONF-9308199–1) **Nuclear structure at particle drip lines.** Dobaczewski, J. (Oak Ridge National Lab., TN (United States)); Hamamoto, I.; Nazarewicz, W.; Sheikh, J.A. Oak Ridge National Lab., TN (United States); Tennessee Univ., Knoxville, TN (United States); Vanderbilt Univ., Nashville, TN (United States). [1993]. 21p. Sponsored by USDOE, Washington, DC (United States);Polish State Committee for Scientific Research (Poland);Forskningsraadsnaemnden, Stockholm (Sweden). DOE Contract AC05-84OR21400 ; FG05-87ER40361 ; FG05-93ER40770. Contract 204509101. From 23. summer school on nuclear physics; Piaski (Poland); 18-28 Aug 1993. Order Number DE94004740. Source: OSTI; NTIS; INIS; GPO Dep.

Several examples of mean-field calculations, relevant to the recent and planned low-spin experimental works, are presented. The perspectives for future studies (mainly related to spectroscopy of exotic nuclei) are reviewed.

7675 (CONF-9309173–7) **Mean field approach to nuclear structure.** Nazarewicz, W. (Oak Ridge National Lab., TN (United States)). Oak Ridge National Lab., TN (United States); Tennessee Univ., Knoxville, TN (United States). Dept. of Physics. [1993]. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400 ; FG05-87ER40361 ; FG05-93ER40770. From Capture gamma-ray symposium; Fribourg (Switzerland); 20-24 Sep 1993. Order Number DE94003474. Source: OSTI; NTIS; INIS; GPO Dep.

Several examples of mean-field calculations, relevant to the recent and planned low-spin experimental works, are presented. The perspectives for future studies (mainly related to spectroscopy of exotic nuclei) are reviewed.

7676 (CONF-9309173–8) **Level repulsion, nuclear chaos, and conserved quantum numbers.** Garrett, J.D. Oak Ridge National Lab., TN (United States). [1993]. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From Capture gamma-ray symposium; Fribourg (Switzerland); 20-24 Sep 1993. Order Number DE94004248. Source: OSTI; NTIS; INIS; GPO Dep.

A statistical analysis of the distribution of level spacings for states with the same spin and parity is described in which the average spacing is calculated for the total ensemble. Though the resulting distribution of level spacings for states of deformed nuclei with Z = 62 - 75 and A = 155 - 185 is the closest to that of a Poisson distribution yet obtained for nuclear levels, significant deviations are observed for small level spacings. Many, but not all, of the very closely-spaced levels have K-values differing by several units. The analysis of level spacings in ^{157}Ho indicate that considerable caution should be excerised when drawing conclusions from such an analysis for a single deformed nucleus, since the sizable number of spacings that can be obtained from a few rotational bands are not all independent.

7677 (DOE/ER/40406–6) **Investigations of nuclear structure and nuclear reactions induced by complex projectiles: Progress report for the period September 1, 1992–August 31, 1993.** Sarantites, D.G. Washington Univ., St. Louis, MO (United States). Dept. of Chemistry. 6 Sep 1993. 112p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-88ER40406. Order Number DE94004715. Source: OSTI; NTIS; INIS; GPO Dep.

This is a progress report on activities of the Washington University group in nuclear reaction studies for the period Sept 1, 1992 to Aug 31, 1993. This group has a research program which touches five areas of nuclear physics: nuclear structure studies at high spin; studies at the interface between structure and reactions; production and study of hot nuclei; reaction mechanism studies; development and use of novel techniques and instrumentation in the above areas of research. Specific activities of the group include in part: superdeformation in ^{82}Sr; structure of and identical bands in ^{182}Hg and ^{178}Pt; a highly deformed band in ^{136}Pm; particle decay of the ^{164}Yb compound nucleus; fusion reactions; proton evaporation; two-proton decay of ^{12}O; modeling and theoretical studies; excited ^{16}O disassembly into four alpha particles; ^{209}Bi + ^{136}Xe collisions at 28.2 MeV/amu; and development work on 4π solid angle gamma detectors, and x-ray detectors.

7678 (JINR-E–4-92-212) **Analysis of compound nucleus formation in reactions ^{100}+^{100}Mo and ^{110}Pd+^{110}Pd. Fusion barrier.** Antonenko, N.V. (Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics); Cherepanov, E.A.; Volkov, V.V.; Nasirov, A.K. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1992. 22p. Order Number DE94611284. Source: OSTI; NTIS (US Sales Only); INIS.

The analysis of the evaporation residue cross sections in reactions $^{100}Mo+^{100}Mo$ and $^{110}Pd+^{110}Pd$ has been carried out within different models of fusion. 28 refs.; 9 figs.

7679 (JINR-E–4-92-542) **The widths of magnetic twist modes.** Molodtsova, I.V.; Bastrukov, S.I.; Shilov, V.M. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1992. 10p. Order Number DE94611259. Source: OSTI; NTIS (US Sales Only); INIS.

Within the dissipative nuclear fluid-dynamics the predictions are presented for the widths of magnetic twist resonances associated with the long wavelength torsion like vibrations of a spherical nucleus. 25 refs.; 2 figs.; 1 tab.

7680 (JINR-R–4-92-165) **Giant dipole resonance with Skyrme forces.** Bal'butsev, E.B. (Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics); Unzhakova, A.V. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1992. 7p. (In Russian). Order Number DE94611260. Source: OSTI; NTIS (US Sales Only); INIS.

The method of Wigner function moments is applied to calculate energies and excitation probabilities of giant dipole resonance with Skyrme forces. Good agreement with the experimental results is obtained. 9 refs.; 1 fig.

7681 (KFKI–1993-11/A, pp. 1-10) **New results of the Fritiof model and collective effects in nucleus collisions.** Gustafson, G. (Lund Univ. (Sweden). Dept. of Theoretical Physics). Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. (CONF-9208245–: Budapest workshop on relativistic heavy ion collisions, Budapest (Hungary), 10-13 Aug 1992). In *Proceedings of the Budapest workshop on relativistic heavy ion collisions.* 149p. Order Number DE94611162. Source: OSTI; NTIS (US Sales Only); INIS.

The following two topics are discussed: First, the transverse momentum exchange for a hard parton-parton scattering must be larger than the $k_{perpendicular}$ for the associated gluon bremsstrahlung. This condition gives a dynamical cutoff for the hard parton scattering. It is implemented in a new Fritiof Monte Carlo which should be be applicable to hadron or nucleus collisions also at very high energies. Second, in collisions between large nuclei the strigs produced should interact with each other and not be fully independent. This will imply somewhat increased values of transverse energy, but a larger effect is expected for the size of the fragmentation region related to Bose-Einstein correlations. (author) 15 refs.; 22 figs.

7682 (ORNL/FTR–4678) **Travel to Denmark to participate in the Symposium on the Perspectives in Nuclear Structure and to Greece and Sweden to present Nuclear Spectroscopy: Foreign trip report, June 6–July 3, 1993.** Garrett, J.D. Oak Ridge National Lab., TN (United States). 14 Sep 1993. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE94000510. Source: OSTI; NTIS (US Sales Only); GPO Dep.

A brief summary of the activities of the traveler, information derived, and impressions gained while attending the Symposium on the Perspectives in Nuclear Structure, Copenhagen, Denmark, the Workshop on Nuclear Spectroscopy at the New Arrays, Lund, Sweden, and the Conference on the Future of Nuclear Structure, Aghia Pelaghia, Crete, Greece, as well as while visiting the Niels Bohr Institute, are described.

7683 (FEI–2182) **Excitation of the reaction of ^{123}I, ^{123}Xe and ^{123}Cs radionuclides production: Experimantal and calculational data.** Dovbenko, A.G.; Kurenkov, N.V.; Lunev, V.P.; Malinin, A.B.; Masterov, V.S.; Shubin, Yu.N. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (Russian Federation). Fiziko-Ehnergeticheskij Inst. 1991. 43p. (In Russian). Order Number DE94611293. Source: OSTI; NTIS (US Sales Only); INIS.

The results of calculations of charged particle induced reactions for the production of radioisotopes ^{123}I, ^{123}Cs, ^{123}Xe are discussed. The excitation functions for reactions $^{124}Xe(p,2n)$, $^{124}Xe(d,3n)$, $^{124}Xe(p,pn+np)$, $^{127}I(p,5n)$, $^{124}Xe(d,p2n)$, $^{123}Te(p,n)$, $^{124}Te(p,2n)$, $^{121}Sb(\alpha,2n)^{123}I$ are calculated on the base of statistical model in energy range up to 80 MeV. The agreement between the calculations and experiment is reasonable as a rule. It is shown, that taking account of the radiative channel is very important near threshold, particularly for neutron deficient nuclei. The analysis performed showed that the calculations with code ALICE can serve as a reasonable evaluation for the excitation functions of various reactions, if they are tested by experiment and by comparison of relevant computer codes. 55 refs.; 9 figs.; 10 tabs.

7684 (JINR-R–4-92-166) **Magnetic characteristics of collective states of isotopes $^{156,158,160,162,164}Dy$.** Mikhajlov, I.N. (Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics); Usmanov, P.N.; Okhunov, A.A.; Briancon, Ch.; Kulessa, R. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1992. 10p. (In Russian). Order Number DE94611317. Source: OSTI; NTIS (US Sales Only); INIS.

WEithin the phenomenological model, which takes into account the Coriolis coupling of the ground bands, the influence of states of bands ion the magnetic characteristics of low-lying levels has been investigated. 18 refs.; 3 figs.; 4 tabs.

7685 (JINR-R–6-92-536) **Nonadiabaticies of monopole and quandrupole transitions in ^{156}Gd.** Gromov, K.Ya. (Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Problems); Usmanov, P.N.; Kholmatov, A.Kh.; Butabaev, Yu.S.; Niyazov, R.A. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Problems. 1992. 16p. (In Russian). Order Number DE94611318. Source: OSTI; NTIS (US Sales Only); INIS.

The theoretical analysis of positive parity states is carried out. Calculations in the framework of the phenomenological model taking into account the mixing of $K^n=0_1^+$, 0_2^+, 0_3^+, 2_1^+ and experimentally studied $K^n=1^+$-band states have been done. The values of monopole matrix element $\rho(E0)$ are estimated. 21 refs.; 2 figs.; 10 tabs.

7686 (PNL-SA–22707) **Simulated progress in double-beta decay.** Miley, H.S. (Pacific Northwest Lab., Richland, WA (United States)); Arthur, R.J.; Avignone, F.T. Pacific Northwest Lab., Richland, WA (United States). Sep 1993. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9309296–1: Theory and phenomenology in astroparticle and underground physics conference, Gran Sasso (Italy), 19-23 Sep 1993). Order Number DE94004720. Source: OSTI; NTIS; INIS; GPO Dep.

A Monte Carlo code has been developed to accurately simulate double-beta decay measurements. Coincident gamma rays, beta spectra, and angular correlations have been added to adequately simulate a complete ^{100}Mo nuclear decay and provide corrections to experimentally determined detector efficiencies. This code has been used to strip certain low-background spectra obtained in the Homestake gold mine in Lead, SD, for the purpose of extremely sensitive materials assay for the construction of new, large, enriched germanium detectors. Assays as low as 9 μBq/g of ^{210}Pb in lead shielding were obtained.

7688 (ANL/EP/CP–81421) **Production of ^{99}Mo using LEU and molybdenum targets in a 1 MW Triga reactor.** Mo, S.C. Argonne National Lab., IL (United States). [1993]. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9310185–5: 16. international meeting on reduced enrichment for research and test reactors (RERTR), Ibaraki (Japan), 3-7 Oct 1993). Order Number DE94004621. Source: OSTI; NTIS; INIS; GPO Dep.

The production of ^{99}Mo using Low Enriched Uranium (LEU) and natural molybdenum targets in a 1 MW Triga reactor is investigated. The successive linear programming technique is applied to minimize the target loadings for different yield constraints. The irradiation time is related to the kinetics of the growth and decay of ^{99}Mo. The feasibility of a neutron generated based ^{99}Mo production system is discussed.

7689 (ANL/NDM–131) **Fast-neutron scattering from vibrational palladium nuclei.** Smith, A.B. (Argonne National Lab., IL (United States)); Guenther, P.T. Argonne National Lab., IL (United States). Oct 1993. 40p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE94005258. Source: OSTI; NTIS; INIS; GPO Dep.

Neutron total cross sections of elemental palladium are measured from ≈0.6–4.5 MeV. These results, combined with others previously reported from this laboratory, provide a detailed knowledge of the neutron total cross sections of palladium from ≈0.1–20 MeV. Differential neutron elastic-scattering cross sections are measured from ≈1.5–10 MeV in sufficient energy and angle detail to well define the energy-average behavior. Concurrently, neutron inelastic-scattering cross sections are measured from ≈1.5–8 MeV. Inelastically-scattered neutron groups are observed corresponding to excitations of: 306 ± 14, 411 ± 47, ≈494, 791 ± 20, 924 ± 20, 1,156 ± 24, 1,358 ± 35, 1,554 ± 47 and 1,706 ± 59 keV, with additional tentative groups at 1,938 and 2,059 keV. Particular attention is given to the inelastic excitation of the 2^+ yrast states of the even isotopes. This broad data base is examined in the context of optical-statistical and coupled-channels models. The resulting model parameters are consistent with systematic trends in this vibrational mass region previously noted at this laboratory, and provide a suitable vehicle for many applications.

7690 (BNL–49626) **High baryon density from relativistic heavy ion collisions.** Pang, Y. (Brookhaven National Lab., Upton, NY (United States)); Kahana, S.H.; Schlagel, T.J. Brookhaven National Lab., Upton, NY (United States); State Univ. of New York, Stony Brook, NY (United States). Oct 1993. 38p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016 ; FG02-93ER40768. (CONF-9305282–2: Particle physics at the fermi scale workshop, Beijing (China), 27 May - 4 jun 1993). Order Number DE94003894. Source: OSTI; NTIS; INIS; GPO Dep.

A quantitative model, based on hadronic physics, is developed and applied to heavy ion collisions at BNL-AGS energies. This model is in excellent agreement with observed particle spectra in heavy ion collisions using Si beams, where baryon densities of three and four times the normal nuclear matter density (ρ_0) are reached. For Au on Au collisions, the authors predict the formation of matter at very high densities (up to 10 ρ_0).

7691 (CEA-CONF–11409) **Characterization of highly charged ions by secondary electron emission.** Delaunay, M. CEA Centre d'Etudes de Grenoble, 38 (France). Dept. de Recherche Fondamentale sur la Matiere Condensee. 1993. 13p. (CONF-9305239–: 11. international workshop on electron resonance ion sources, Groningen (Netherlands), 5-8 May 1993). Order Number DE94611370. Source: OSTI; NTIS (US Sales Only); INIS.

The secondary electron emission yield from a metal surface bombarded by highly charged ions is measured to determine the ratio of different ions whose (q/m) are identical and therefore cannot be selected by a magnetic spectrometer. For impact of Ar^{q+} ions ($4 \leq q \leq 14$) and Ne^{q+} ions ($4 \leq q \leq 9$), the total yields of secondary electrons appear to be linearly proportional to q^2. Thus the electron emission for the neutralization of $^{40}Ar^{16+}$ can be estimated and the ion current ratio $^{40}Ar^{16+}/^{15}N^{6+}$ is determined. (author).

7692 (CONF-9210121–, pp. 5-16) **Prototypical experiments in nuclear astrophysics.** Champagne, A.E. (Univ. of North Carolina, Chapel Hill, NC (United States)). Oak Ridge National Lab., TN (United States); Oak Ridge Inst. for Science and Education, TN (United States). [1992]. From Workshop on the production and use of intense radioactive ion beams for the IsoSpin Laboratory; Oak Ridge, TN (United States); 7-10 Oct 1992. In *Proceedings of the workshop on the production and use of intense radioactive beams at the Isospin Laboratory*. 442p. Order Number DE94000630. Source: OSTI; NTIS; INIS; GPO Dep.

During explosive nucleosynthesis, temperatures are on the order of (0.2 - 1.5) x 10^9 K and average densities can be 10^3 - 10^6 g/cm^3. Under these extreme conditions, nuclear reactions will proceed on timescales of ns - min (though more typically sec - min). Thus any nuclei produced with comparable half lives will become targets for subsequent nuclear reactions. Measurements of at least some of these reactions are desirable, both from an astrophysical and from a nucleosynthetic perspective: Cataclysmic binaries are powered by these reactions and so a knowledge of their rates is crucial to an understanding of the outburst mechanism. Astrophysicists are also interested in elemental abundances, particularly of spectroscopic tracers such as ^{22}Na, ^{26}Al and ^{44}Ti. In type II supernovae, these reactions are incidental to the outburst, but again nucleosynthesis can provide clues as to the physical conditions during an explosion. To be very general, these reactions will have both large cross sections and small cross sections. The former reactions are important for energy generation and in principle they can be measured directly with radioactive beams. The latter reactions limit power output and play a role in the production of the trace elements which could be used as spectroscopic probes. Here direct measurements are probably impractical, but nuclear spectroscopy, involving both stable and radioactive beams, can provide the desired information.

7693 (CONF-9210121–, pp. 17-33) **High-spin nuclear structure studies with radioactive ion beams.** Baktash, C. (Oak Ridge National Lab., TN (United States)). Oak Ridge National Lab., TN (United States); Oak Ridge Inst. for Science and Education, TN (United States). [1992]. DOE Contract AC05-84OR21400. From Workshop on the production and use of intense radioactive ion beams for the IsoSpin Laboratory; Oak Ridge, TN (United States); 7-10 Oct 1992. In *Proceedings of the workshop on the production and use of intense radioactive beams at the Isospin Laboratory*. 442p. Order Number DE94000630. Source: OSTI; NTIS; INIS; GPO Dep.

Two important developments in the sixties, namely the advent of heavy-ion accelerators and fabrication of Ge detectors, opened the way for the experimental studies of nuclear properties at high angular momentum. Addition of a new degree of freedom, namely spin, made it possible to observe such fascinating phenomena as occurrences and coexistence of a variety of novel shapes, rise, fall and occasionally rebirth of nuclear collectivity, and disappearance of pairing correlations. Today, with the promise of development of radioactive ion beams (RIB) and construction of the third-generation Ge-detection systems (GAMMASPHERE and EUROBALL), nuclear physicists are poised to explore new and equally fascinating phenomena that have been hitherto inaccessible. With the addition of yet another dimension, namely the isospin, they will be able to observe and verify predictions for exotic shapes as varied as rigid triaxiality, hyperdeformation and triaxial-octupole shapes, or to investigate the T=O pairing correlations. In this paper, the author reviews, separately for neutron-deficient and neutron-rich nuclei, these and a few other new high-spin physics opportunities that may be realized with RIB. Following this discussion, a list of the beam species, intensities and energies that are needed to fulfill these goals is presented. The paper concludes with a description of the experimental techniques and instrumentations that are required for these studies.

7694 (CONF-9210121–, pp. 35-49) **Study of nuclear reactions at an ISL facility.** Becchetti, F.D. (Univ. of Michigan, Ann Arbor, MI (United States)). Oak Ridge National Lab., TN (United

States); Oak Ridge Inst. for Science and Education, TN (United States). [1992]. From Workshop on the production and use of intense radioactive ion beams for the IsoSpin Laboratory; Oak Ridge, TN (United States); 7-10 Oct 1992. In *Proceedings of the workshop on the production and use of intense radioactive beams at the Isospin Laboratory.* 442p. Order Number DE94000630. Source: OSTI; NTIS; INIS; GPO Dep.

Researchers are entering an exciting period of nuclear science. As discussed in the previous ISL "white paper" the severe constraints imposed by using stable beams, (i.e. those which typically have N $\approx$ Z, are in the g.s., have zero or low spin, and are close to spherical) can be removed by the use of unstable nuclear beams (RIB/RNB). Thus in many ways, researchers are starting a new in nuclear physics. Obviously they do not want to just repeat 80 years of nuclear science but, instead, should concentrate on the new information that can be realized using RIB/RNB. Although study of reactions related to nuclear astrophysics will certainly play a significant role at ISL, nuclear astrophysics alone should not dictate the operating parameters. It now appears that much of the needed astrophysics-related data can be obtained from high-energy RIB/RNB reactions. As an example breakup information can be used in lieu of low energy (p,γ) or (n,γ) data. Also some of the most significant results may well come in non-astrophysics related experiments. (Of course, almost all of nuclear science is related to astrophysics in some way).

7695 (CONF-9210121–, pp. 51-63) **Prototypical experiments: Proton-rich nuclei reaction studies with inverse kinematics.** Hardy, J.C. (Chalk River Laboratories, Chalk River, Ontario (Canada)). Oak Ridge National Lab., TN (United States); Oak Ridge Inst. for Science and Education, TN (United States). [1992]. From Workshop on the production and use of intense radioactive ion beams for the IsoSpin Laboratory; Oak Ridge, TN (United States); 7-10 Oct 1992. In *Proceedings of the workshop on the production and use of intense radioactive beams at the Isospin Laboratory.* 442p. Order Number DE94000630. Source: OSTI; NTIS; INIS; GPO Dep.

Several prototypical experiments are described which exploit single- and two-nucleon transfer as well as charge-exchange reactions - all in inverse kinematics - to study nuclear spectroscopy. The examples chosen relate to the N~Z nuclei with $56 \leq A \leq 100$ and to the study of superallowed β decay, but the potential usefulness of these reactions extends far beyond. It is concluded, however, that this rich potential can only be tapped at a future radioactive-beam facility if the beam energies reach at least 25 MeV/u and preferably 50 MeV/u.

7696 (CONF-9210121–, pp. 65-82) **Prototypical experiments: Neutron-rich nuclei.** Kratz, K.L. (Universitaet Mainz (Germany)); Moeller, P.; Thielemann, F.K. Oak Ridge National Lab., TN (United States); Oak Ridge Inst. for Science and Education, TN (United States). [1992]. Grant DFG (Kr 806/1); Grant BMFT (06 MZ 106); Grant GSI (MZ Kra From Workshop on the production and use of intense radioactive ion beams for the IsoSpin Laboratory; Oak Ridge, TN (United States); 7-10 Oct 1992. In *Proceedings of the workshop on the production and use of intense radioactive beams at the Isospin Laboratory.* 442p. Order Number DE94000630. Source: OSTI; NTIS; INIS; GPO Dep.

In this paper the authors focus on the strong interplay between nuclear-structure properties of neutron-rich nuclei far from stability and stellar nucleosynthesis of elements beyond Fe by rapid neutron-capture processes. In the past, at several stages in the development of an understanding of the *r*-process mechanisms, the major limitation to further progress has been - and still is - the degree to which the associated nuclear physics is known. Therefore, it is no surprise that even today the exact stellar site of the r-process ('where in a supernova?') is not known. With the close connection between not only gross but also detailed microscopic nuclear physics and whatever constraints can be imposed on models for the astrophysical environments, it is obvious that only additional and more accurate experimental data on exotic neutron-rich isotopes can lead to a better understanding of r-process nucleosynthesis. An interesting recent finding in this context is that with the present knowledge of nuclear physics, of isotopic r-process abundances in nature, and of supernova models, deficiencies in calculated abundance patterns seem to indicate nuclear-structure effects on the very-neutron-rich side of β-stability for nuclei so far not observable in terrestrial laboratories. With the expected improvement in the production of far-unstable species at future ISOL and RIB facilities, unique opportunities will be provided not only to answer questions on fundamental current nuclear-structure themes, but also to allow the study of new phenomena, obviously derivable from astrophysical 'observations' but not from present nuclear-model extrapolations.

7697 (CONF-9210121–, pp. 105-127) **Report from discussion group on experiments with radioactive beams.** Vieira, D.J. (Los Alamos National Lab., NM (United States)); Wiescher, M. Oak Ridge National Lab., TN (United States); Oak Ridge Inst. for Science and Education, TN (United States). [1992]. From Workshop on the production and use of intense radioactive ion beams for the IsoSpin Laboratory; Oak Ridge, TN (United States); 7-10 Oct 1992. In *Proceedings of the workshop on the production and use of intense radioactive beams at the Isospin Laboratory.* 442p. Order Number DE94000630. Source: OSTI; NTIS; INIS; GPO Dep.

During the course of the workshop, a wide range of futuristic radioactive-beam experiments were discussed. These extended from the study of electroweak interactions in nuclei to materials science, nuclear astrophysics, and a host of nuclear physics investigations. Emphasis was placed on illustrating how these prototypical experiments could be accomplished, discussing what types of detection systems would be needed, exploring the new problems that would confront the radioactive-beam experimenter, and better defining the beam requirements.

7698 (CONF-9210121–, pp. 137-140) **Beta-delayed (alpha) particle emission; A probe of weak interactions in nuclei.** Gai, M. (Yale Univ., New Haven, CT (United States)). Oak Ridge National Lab., TN (United States); Oak Ridge Inst. for Science and Education, TN (United States). [1992]. From Workshop on the production and use of intense radioactive ion beams for the IsoSpin Laboratory; Oak Ridge, TN (United States); 7-10 Oct 1992. In *Proceedings of the workshop on the production and use of intense radioactive beams at the Isospin Laboratory.* 442p. Order Number DE94000630. Source: OSTI; NTIS; INIS; GPO Dep.

The authors propose proto-typical experiments for the Iso-Spin Laboratory: measurement of the beta-delayed alpha-particle emissions of ^{20}F and ^{20}Na with an estimated branching ratio of the order of 10^{-6}, to study rank one first forbidden beta decay of mirror nuclei, and the beta-delayed alpha-particle emission of ^{18}N with an estimated branching ratio of 10^{-10}, to study parity violation in ^{18}O. These experiments are natural extensions of the Yale experiment that measured the beta-delayed alpha-particle emission of ^{16}N, with a sensitivity for the branching ratio in the range of 10^{-9} to 10^{-10}. These experiments will utilize the high intensity secondary (radioactive) beams of the IsoSpin Laboratory, but will not require post acceleration.

7699 (CONF-9210121–, pp. 151-153) **A new region for fission and fission isomer studies.** Wilhelmy, J.B. (Los Alamos National Lab., NM (United States)); Moeller, P. Oak Ridge National Lab., TN (United States); Oak Ridge Inst. for Science and Education, TN (United States). [1992]. From Workshop on the production and use of intense radioactive ion beams for the IsoSpin Laboratory; Oak Ridge, TN (United States); 7-10 Oct 1992. In *Proceedings of the workshop on the production and use of intense radioactive beams at the Isospin Laboratory.* 442p. Order Number DE94000630. Source: OSTI; NTIS; INIS; GPO Dep.

An IsoSpin Laboratory would offer a unique opportunity to greatly extend the knowledge of the fission process. Near barrier studies of fission have been largely limited to a relatively narrow region of actinides (Th-Cf). Over the past decade the most exciting areas of fission studies have been associated with the very heaviest elements where rapidly changing barrier and shell properties have resulted in strong variations in mass distributions and kinetic energy release. These areas are, however, extremelly difficult to access and only limited quantities of data have been obtained. With an ISL facility it will be possible to produce copious quantities of previously inaccessible isotopes (due to a lack of any stable or long lived targets) in the region between Pb and Th. Using the ISL prototypical

design it is estimated that over 300 isotopes will be produced in the Pb-Th region having beam intensities > 10^6 particles/sec.

7700 (CONF-9210121–, pp. 155-158) **Production of beams of nuclei far from stability.** Boyd, R.N. (Ohio State Univ., Columbus, OH (United States)); Wiescher, M.C. Oak Ridge National Lab., TN (United States); Oak Ridge Inst. for Science and Education, TN (United States). [1992]. From Workshop on the production and use of intense radioactive ion beams for the IsoSpin Laboratory; Oak Ridge, TN (United States); 7-10 Oct 1992. In *Proceedings of the workshop on the production and use of intense radioactive beams at the Isospin Laboratory.* 442p. Order Number DE94000630. Source: OSTI; NTIS; INIS; GPO Dep.

A scheme is considered for producing extremely neutron rich nuclides in which a secondary radioactive nuclear beam is accelerated and fragmented to produce the (tertiary) beams of interest. Although little is known about some of the cross sections, the scheme appears sufficiently promising to warrant further investigation.

7701 (CONF-9210121–, pp. 159-162) **Rp-Process measurements with high-intensity RNBs.** Goerres, J. (Univ. of Notre Dame, Notre Dame, IN (United States)). Oak Ridge National Lab., TN (United States); Oak Ridge Inst. for Science and Education, TN (United States). [1992]. From Workshop on the production and use of intense radioactive ion beams for the IsoSpin Laboratory; Oak Ridge, TN (United States); 7-10 Oct 1992. In *Proceedings of the workshop on the production and use of intense radioactive beams at the Isospin Laboratory.* 442p. Order Number DE94000630. Source: OSTI; NTIS; INIS; GPO Dep.

The author has calculated the reaction yields of several reactions of importance to the study of the rp process. The reactions considered are $^{19}Ne(p,\gamma)$, $^{31}S(p,\gamma)$, $^{39}Ca(p,\gamma)$, and $^{56}Ni(p,\gamma)$. By comparison with the recently measured reaction $^{13}N(p,\gamma)$, the yields are down by at least two orders of magnitude. Experimental measurement of these yield rates will require good beam intensity, and improved background reduction.

7702 (CONF-9210121–, pp. 163-166) **Samples for s- and p-process studies.** Kaeppeler, F. (Univ. of Karlsruhe, Karlsruhe (Germany)); Wiescher, M.; Koehler, P.E. Oak Ridge National Lab., TN (United States); Oak Ridge Inst. for Science and Education, TN (United States). [1992]. From Workshop on the production and use of intense radioactive ion beams for the IsoSpin Laboratory; Oak Ridge, TN (United States); 7-10 Oct 1992. In *Proceedings of the workshop on the production and use of intense radioactive beams at the Isospin Laboratory.* 442p. Order Number DE94000630. Source: OSTI; NTIS; INIS; GPO Dep.

This paper discusses the need for more experimental information with regard to the study of the s process, and the p process in stellar nucleosynthesis. In particular the need for stellar (n,γ) cross sections is considered. For unstable isotopes this need is the greatest at present. Because of experimental problems with neutron capture, these experiments appear to require off-line setups. That means the preparation of samples which are isotopically separated. Assuming conservative production rates, and limiting the selection to cases where the target half-life is much greater than the product half-life, and $E_\gamma < E_\gamma$, for the sake of detection, the authors have selected a group of potential isotopes for study: ^{134}Cs, ^{135}Cs, ^{137}Cs, ^{147}Nd, ^{147}Pm, ^{148}Pm, ^{154}Eu, ^{155}Eu, ^{163}Ho, ^{169}Er, ^{170}Tm, ^{171}Tm, and ^{179}Ta.

7703 (CONF-9305293–3) **The future radioactive ion beam research program at Oak Ridge.** Ball, J.B. Oak Ridge National Lab., TN (United States). [1993]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From International symposium on nuclear structure physics today; Taiwan (China); 11-14 May 1993. Order Number DE94002784. Source: OSTI; NTIS; GPO Dep.

Early in 1995, the ORNL Holifield Facility is scheduled to return to operation as a dedicated radioactive ion beam (RIB) facility. This enhanced capability will open up new possibilities for research on the structure of and phenomena occurring in proton-rich nuclei. Among the opportunities will be the creation of heavier N~Z nuclei, approaching ^{100}Sn, and the study of exotic nuclear shapes, extensions of studies of the p-n interaction and super-allowed beta decay, and examination of nuclear structure near the proton drip line. In addition to new nuclear and atomic physics research opportunities, the beams from the Holifield RIB facility are expected to provide new capabilities for measurements important to nuclear astrophysics. To carry out this experimental program, various upgrades are planned to the existing experimental apparatus, and a new, third-generation, recoil-mass separator is being constructed.

7704 (CONF-930867–4) **Heavy Ion Coulomb excitation and gamma decay studies of the one and two phonon giant dipole resonances in ^{208}Pb and ^{209}Bi.** Mueller, P.E. (and others); Beene, J.R.; Bertrand, F.E. Oak Ridge National Lab., TN (United States). [1993]. 7p. Sponsored by USDOE, Washington, DC (United States);National Science Foundation, Washington, DC (United States). DOE Contract AC05-84OR21400. From Gull Lake nuclear physics conference on giant resonances; Gull Lake, MI (United States); 17-21 Aug 1993. Order Number DE94003473. Source: OSTI; NTIS; INIS; GPO Dep.

Projectile – photon coincidences were measured for the scattering of an 80 MeV/nucleon ^{64}Zn beam from ^{208}Pb and ^{209}Bi targets at the GANIL heavy ion accelerator facility. Projectile-like particles between 0.5° and 4.5° relative to the incident beam direction were detected in the SPEG energy loss spectrometer where their momentum, charge, and mass were determined. Photons were detected in the BaF_2 scintillation detector array TAPS. Light charged particles produced in the reaction were detected in the KVI Forward Wall. The analysis of the data acquired in this experiment is focused on three different phenomena: (1) the two phonon giant dipole resonance, (2) time dependence of the decay of the one phonon giant dipole resonance, and (3) giant resonance strength in projectile nuclei.

7705 (CONF-9311139–1) **Experimental and theoretical nuclear data work at ORELA.** Larson, D.C. Oak Ridge National Lab., TN (United States). [1993]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From 1993 symposium on nuclear data; Tokai (Japan); 18-19 Nov 1993. Order Number DE94004246. Source: OSTI; NTIS; INIS; GPO Dep.

The Oak Ridge Electron Linear Accelerator (ORELA) passed the 100,000 hours of operation milestone in October, 1992, and continues to operate as an intense, pulsed neutron source. In addition to performing measurements of interest to applied and basic research, they are involved in international nuclear data evaluation activities, as well as nuclear model code development. The intense, slow-positron source attached to ORELA continues to attract interest from industry, and a new photon activation facility added this last year is also being used for basic research and by industry. The author describes some of the above activities.

7706 (DOE/ER/40281–8) **[Relativistic heavy ion research]: [Annual report for 15 November 1992–14 November 1993].** Nagamiya, S. Columbia Univ., New York, NY (United States). [1993]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-86ER40281. Order Number DE94004701. Source: OSTI; NTIS; INIS; GPO Dep.

This progress report describes the participation of members of the Nevis group in different experiments during the FY93 period. There was major involvement in: BNL/AGS experiment E802/859/866; BNL RHIC experiment PHENIX; and CERN/SPS experiment NA44. The group was also involved in the small scale experiment E858/878 at BNL/AGS. For the BNL/AGS experiment data collection is now complete, and the group is involved in data analysis. Contributions to systematic procedures for measuring and maintaining the high calibration of the time-of-flight system, along with the previously developed trigger system have been significant contributions to the physics which is beginning to emerge from this heavy ion experiment. The CERN experiment has published first results on S-Pb collisions, with emphasis on two particle correlations. The group has been actively involved in data collection this year. Emphasis is being placed on proton-proton interactions in S-Pb and proton-Pb collisions. The PHENIX experiment is aimed at measuring signatures of quark-gluon plasma. The Nevis group has been actively involved in this experiment from design of the time-of-flight and trigger system, to acting as experiment spokesman.

7707 (DOE/ER/40316–7) **Studies of complex fragment emission in heavy ion reactions: Progress report, January 1, 1993–September 15, 1993.** Charity, R.J.; Sobotka, L.G. Washington Univ., St. Louis, MO (United States). 12 Sep 1993. 42p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-87ER40316. Order Number DE94001309. Source: OSTI; NTIS; INIS; GPO Dep.

The study of intermediate-energy heavy-ion nuclear reactions is reported. This work has two foci: the properties of nuclear matter under abnormal conditions, in this energy domain, predominately low densities and the study of the relevant reaction mechanisms. Nuclear matter properties, such as phase transitions, are reflected in the dynamics of the reactions. The process leads to an understanding of the reaction mechanism themselves and therefore to the response characteristics of finite, perhaps non-equilibrium, strongly interacting systems. The program has the following objectives: to study energy, mass, and angular momentum deposition by studying incomplete fusion reactions; to gain confidence in the understanding of how highly excited systems decompose by studying all emissions from the highly excited systems; to push these kinds of studies into the intermediate energy domain (where intermediate mass fragment emission is not improbable) with excitation function studies; and to learn about the dynamics of the decays using particle-particle correlations. The last effort focuses on simple systems, where definitive statements are possible. These avenues of research share a common theme, large complex fragment production. It is this feature, more than any other, which distinguishes the intermediate energy domain.

7708 (DOE/ER/40342–6) **Colorado School of Mines low energy nuclear physics project: Final technical progress report.** Cecil, F.E. Colorado School of Mines, Golden, CO (United States). Dept. of Physics. 23 Nov 1993. 22p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-87ER40342. Order Number DE94004851. Source: OSTI; NTIS; INIS; GPO Dep.

This report summarizes the accomplishments of the project "Studies of nuclear reactions at very low energies". This project was undertaken in 1987 and completed in 1993. All but one of the major objectives of this study have been accomplished. Specifically the authors have completed their investigation of the (p,γ) on light nuclei, a study of the Oppenheimer-Phillips effect, a measurements of the astrophysically interesting reaction $D(\alpha,\gamma)^6Li$ at low energies and an extension of the reaction $D(d,\gamma)^4He$ to lower energies than previously observed. Preliminary investigation of te reaction $^7Li(^3He,p)^9Be$ was begun and is continuing under a separate DOE grant. In addition to these tasks, they have completed some very interesting projects which were not included in the original proposal. These include a study of the (d,γ) reactions on ^6Li, ^7Li and ^{10}B and an investigation of the possibility of observing terrestrial antineutrinos from the beta decay chains of U and Th as a diagnostic of terrestrial heat flow.

7709 (DOE/ER/40402–6) **Oregon State University nuclear chemistry progress report, August 1, 1992–July 1, 1993.** Loveland, W. Oregon State Univ., Corvallis, OR (United States). Jul 1993. 41p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG06-88ER40402. Order Number DE94001585. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses the following topics related to nuclear chemistry: Element 110; synthesis of heavy nuclei with complete fusion reactions involving radioactive nuclear beams; the interaction of 21–44 MeV/nucleon Xe with Au; MeV/nucleon ^{86}Kr with ^{197}Au; intermediate energy Ar-Th collisions; target-like fragments from the interaction of 29 MeV/nucleon ^{208}Pb with ^{197}Au; the intermediate of 22 and 32 MeV/nucleon ^{16}O with ^{197}Au; Au projectile fragmentation at 20 MeV/nucleon; relativistic heavy ion research; and pulse height defect measurements for very heavy ions.

7710 (DOE/ER/40404–5) **Nuclear chemistry progress report.** Viola, V.E.; Kwiatkowski, K. Indiana Univ., Bloomington, IN (United States). Aug 1993. 33p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-88ER40404. Order Number DE94004716. Source: OSTI; NTIS; INIS; GPO Dep.

This is the annual progress report for the Indiana University nuclear chemistry program for the 1992/1993 year. Accomplishments include the construction, testing, and initial experimental runs of the Indiana Silicon Sphere (ISiS) 4π charged particle detector. ISiS is designed to study energy dissipation and multifragmentation phenomena in light-ion-induced nuclear reactions at medium-to-high energies. Its second test run was to examine 3.6 GeV ^3He beam reactions at Laboratoire National Saturne (LNS) in Saclay. The development and deployment of this system has occupied a great deal of the groups effort this reporting period. Additional work includes: calculations of isotopic IMF yields in the $^4He + ^{116,124}Sn$ reaction; cross sections for A = 6 - 30 fragments from the $^4He + ^{28}Si$ reaction at 117 and 198 MeV; charging effects of passivated silicon detectors; neck emission of intermediate-mass fragments in the fission of hot heavy nuclei.

7711 (DOE/ER/40414–6) **Studies of heavy-ion reactions and transuranic nuclei: Progress report, September 1, 1992–August 31, 1993.** Schroeder, W.U. Rochester Univ., NY (United States). Aug 1993. 353p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-88ER40414. Order Number DE94004642. Source: OSTI; NTIS; INIS; GPO Dep.

This report contain papers on the following topics: The Cold-Fusion Saga; Decay Patterns of Dysprosium Nuclei Produced in $^{32}S + ^{118,124}Sn$ Fusion Reactions; Unexpected Features of Reactions Between Very Heavy Ions at Intermediate Bombarding Energies; Correlations Between Neutrons and Charged Products from the Dissipative Reaction $^{197}Au+^{208}Pb$ at E/A = 29 MeV; Dissipative Dynamics of Projectile-Like Fragment Production in the Reaction $^{209}Bi+^{136}Xe$ at E/A = 28.2 MeV; Dynamical Production of Intermediate-Mass Fragments in Peripheral $^{209}Bi+^{136}Xe$ Collisions at E_{lab}/A = 28.2 MeV; The Rochester 960-Liter Neutron Multiplicity Meter; A Simple Pulse Processing Concept for a Low-Cost Pulse-Shape-Based Particle Identification; A One-Transistor Preamplifier for PMT Anode Signals; A Five-Channel Multistop TDC/Event Handler for the SuperBall Neutron Multiplicity Meter; Construction of the SuperBall – a 16,000-Liter Neutron Detector for Calorimetric Studies of Intermediate-Energy Heavy-Ion Reactions; A Computer Code for Light Detection Efficiency Calculations for Photomultipliers of a Neutron Detector; Evaluation of Gd-Loaded Liquid Scintillators for the SuperBall Neutron Calorimeter; and Measurement of the Interaction of Cosmic-Ray μ^- with a Muon Telescope.

7712 (DOE/ER/40427–15-N93) **Color transparency.** Jennings, B.K. (TRIUMF, Vancouver, BC (Canada)); Miller, G.A. Washington Univ., Seattle, WA (United States). Dept. of Physics. [1993]. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG06-88ER40427. (CONF-9306260–2: Conference on exclusive reactions at high momentum transfer, Elba (Italy), 24-26 Jun 1993). Order Number DE94002725. Source: OSTI; NTIS; INIS; GPO Dep.

The anomously large transmission of nucleons through a nucleus following a hard collision is explored. This effect, known as color transparency, is believed to be a prediction of QCD. The necessary conditions for its occurrence and the effects that must be included a realistic calculation are discussed.

7713 (DOE/ER/40442–6) **Studies of nuclear processes: Progress report, 1 September 1992–31 August 1993.** Ludwig, E.J. Triangle Universities Nuclear Lab., Durham, NC (United States). 1 Sep 1993. 199p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-88ER40442 ; FG05-91ER40619 ; FG05-88ER40441. Order Number DE94002470. Source: OSTI; NTIS; INIS; GPO Dep.

Results for the period 1 Sep 92 through 31 Aug 93 are presented in nearly a hundred brief papers, some of which present new but preliminary data. Activities reported may be grouped as follows: Fundamental symmetries in the nucleus (parity-mixing measurements, time reversal invariance measurements, signatures of quantum chaos in nuclei), Internucleon reactions (neutron – proton interactions, the neutron – neutron scattering length, reactions between deuterons and very light nuclei), Dynamics of very light nuclei (measurements of D states of very light nuclei by transfer reactions, nuclear reactions between very light nuclei, radiative capture reactions with polarized sources), The many-nucleon problem (nuclear astrophysics, high-spin spectroscopy and superdeformation, the nuclear mean field: Dispersive relations and nucleon scattering, configuration mixing in ^{56}Co and ^{46}Sc using

(d,α) reactions, radiative capture studies, high energy resolution resonance studies at 100–400 keV, nuclear data evaluation for A=3–20), Nuclear instruments and methods (FN tandem accelerator operation, KN accelerator operation and maintenance, atomic beam polarized ion source, development of techniques for determining the concentration of SF_6 in the accelerator insulating gas mixture, production of beams and targets, detector systems, updating of TeX, Psprint, and associated programs on the VAX cluster), and Educational Activities.

7714 (DOE/ER/40537–31) **Shape changes and isospin purity in highly excited light mass nuclei.** Kicinska-Habior, M. (Warsaw Univ. (Poland)); Snover, K.A.; Behr, J.A.; Gossett, C.A.; Gundlach, J.H.; Drebi, Z.M.; Kaplan, M.S.; Wells, D.P. Washington Univ., Seattle, WA (United States). Nuclear Physics Lab. [1993]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG06-90ER40537. (CONF-930867–2: Gull Lake nuclear physics conference on giant resonances, Gull Lake, MI (United States), 17-21 Aug 1993). Order Number DE94002317. Source: OSTI; NTIS; INIS; GPO Dep.

The statistical decay of the Giant Dipole Resonance built on a highly excited states of light-mass nuclei was studied in inclusive experiments. Results of the search for a shape change of hot, fast-rotating ^{45}Sc and the test of the isospin purity at high excitation in ^{28}Si and ^{26}Al are reported.

7715 (DOE/ER/40692–2) **Relativistic heavy ion physics: Progress report, November 15, 1992–November 14, 1993.** Hill, J.C.; Wohn, F.K. Iowa State Univ. of Science and Technology, Ames, IA (United States). Dept. of Physics and Astronomy. [1993]. 42p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-92ER40692. Order Number DE94003161. Source: OSTI; NTIS; INIS; GPO Dep.

This is a progress report for the period May 1992 through April 1993. The first section, entitled "Purpose and Trends, gives background on the recent trends in the research program and its evolution from an emphasis on nuclear structure physics to its present emphasis on relativistic heavy ion and RHIC physics. The next section, entitled "Physics Research Progress", is divided into four parts: participation in the program to develop a large detector named PHENIX for the RHIC accelerator; joining E864 at the AGS accelerator and the role in that experiment; progress made in the study of electromagnetic dissociation highlight of this endeavor is an experiment carried out with the ^{197}Au beam from the AGS accelerator in April 1992; progress in completion of the nuclear structure studies. In the final section a list of publications, invited talks, and contributed talks is given.

7716 (DOE/ER/40756–1) **Theoretical and computational studies in intermediate energy nuclear physics: Progress report, November 1, 1992–October 31, 1993.** Elster, C. Ohio Univ., Athens, OH (United States). Dept. of Physics and Astronomy. Aug 1993. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-93ER40756. Order Number DE94004177. Source: OSTI; NTIS; INIS; GPO Dep.

The research includes applications of many-body scattering theory to nuclear systems and studies of few-body systems described by effective hadronic field theories. Progress was made in bringing all first-order effects into the nonrelativistic elastic nucleon-nucleus scattering in a consistent fashion. This work is directed towards completely and reliably calculating the first-order term in a Watson expansion including a modification through the nulear medium. The research effort in few-body physics was concentrated on nucleon-nucleon (NN) scattering below pion production threshold, where recent measurements indicated that the backward-angle neutron-proton (np) differential cross section may show sensitivity to the size of the pion-nucleon coupling constant.

7717 (INP-MSU–92-35-284) **Effective number of inelastically interacting nucleons in rare nucleus-nucleus production processes.** Korotkikh, V.L.; Lokhtin, I.P. Moskovskij Gosudarstvennyj Univ., Moscow (Russian Federation). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki. 1992. 19p. (NIIYaF-MGU–92-35-284.). Order Number DE94611371. Source: OSTI; NTIS (US Sales Only); INIS.

A model of nucleus-nucleus interaction using one inelastic NN-interaction is suggested for the exclusive production processes with small cross-section. A-dependence nuclear coherent and incoherent production cross-section are predicted. 20 refs.; 4 figs.

7718 (JINR-R–2-92-170) **Deep-inelastic operators in meson-nucleon theory.** Kazakov, K.Yu. (Dal'nevostochnyj Gosudarstvennyj Univ., Vladivostok (Russian Federation)); Umnikov, A.Yu.; Kaptar', L.P. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1992. 19p. (In Russian). Order Number DE94611341. Source: OSTI; NTIS (US Sales Only); INIS.

A nonrelativistic meson-nucleon theory of deep-inelastic scattering (DIS) of leptons of the deuteron is considered. 28 refs.; 2 figs.

7719 (KFKI–1993-11/A) **Proceedings of the Budapest workshop on relativistic heavy ion collisions.** Csoergoe, T.; Hegyi, S.; Levai, P. Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. 149p. (CONF-9208245–: Budapest workshop on relativistic heavy ion collisions, Budapest (Hungary), 10-13 Aug 1992). Order Number DE94611162. Source: OSTI; NTIS (US Sales Only); INIS.

This volume is the Proceedings of the Budapest workshop on relativistic heavy ion collisions held in Budapest, 10-13 Aug, 1992. The topics include experimental heavy ion physics, Bose-Einstein correlations, intermittency, relativistic transport theory, Quark-Gluon Plasma rehadronization, astronuclear physics and cosmology. All contributions were indexed and abstracted. (author).

7720 (KFKI–1993-11/A, pp. 11-14) **Stopping power for large nuclei at very high energies.** Schoenfeld, Th. (Frankfurt Univ. (Germany). Inst. fuer Theoretische Physik); Stoecker, H.; Greiner, W.; Sorge, H. Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. (CONF-9208245–: Budapest workshop on relativistic heavy ion collisions, Budapest (Hungary), 10-13 Aug 1992). In *Proceedings of the Budapest workshop on relativistic heavy ion collisions.* 149p. Order Number DE94611162. Source: OSTI; NTIS (US Sales Only); INIS.

The microscopic phase space approach of Relativistic Quantum Molecular Dynamics (RQMD) is used to investigate the stopping power of very heavy nuclei at very high energies. No gap has been found in the rapidity distribution around mid-rapidity even at RHIC energies ($\sqrt{s}$=200 AGeV), but strong filling of the mid rapidity region was found. Neither is there a broad plateau for secondaries nor are the correlations between space-time and momentum as strong as in the Bjorken-McLarren scenario. This renders the Bjorken picture questionable at these energies for systems of combined mass A>400. (author) 20 refs.; 4 figs.

7721 (KFKI–1993-11/A, pp. 15-26) **Rehadronisation mechanisms in ultrarelativistic heavy ion collisions.** Zimanyi, J. (Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics); Levai, P.; Lukacs, B.; Racz, A. Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. (CONF-9208245–: Budapest workshop on relativistic heavy ion collisions, Budapest (Hungary), 10-13 Aug 1992). In *Proceedings of the Budapest workshop on relativistic heavy ion collisions.* 149p. Order Number DE94611162. Source: OSTI; NTIS (US Sales Only); INIS.

In ultrarelativistic heavy ion collisions a piece of matter with extremely high energy density will be produced. According to present QCD pictures a kind of quark matter will be created. To understand the processes going on in such collisions, the production and the rehadronisation of the quark matter was discussed separately. Different rehadronisation mechanisms are compared. Specifically, the particle composition of the rehadronised quark matter is investigated, the way as the initial flavor composition of the quark matter is reflected in the hadronic yield. (K.A.) 16 refs.; 11 figs.; 1 tab.

7722 (KFKI–1993-11/A, pp. 27-30) **The hadronization of a quark-gluon plasma.** Knoll, J. (Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany)). Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. (CONF-9208245–: Budapest workshop on relativistic heavy ion collisions, Budapest (Hungary), 10-13 Aug 1992). In *Proceedings of the Budapest workshop on relativistic heavy ion collisions.* 149p. Order Number DE94611162. Source: OSTI; NTIS (US Sales Only); INIS.

The hadronization process of an expanding quark-gluon plasma is studied within two different non-equilibrium approaches. In the flavor kinetic model, a bulk transition mechanism is considered including resonance decay and particle evaporation, while in the second model the decay is explored through the evaporation of hadrons from the surface of a plasma droplet. The yield of different hadrons are calculated. In particular the production of strange hadrons and of vector mesons are discussed in the light of recent data from ultra-relativistic nucleus-nucleus collisions. (author) 21 refs.; 6 figs.

7723 (KFKI–1993-11/A, pp. 31-35) **Measurements from Au+Au interactions at 11.6 A GeV/c.** Tannenbaum, M.J. (Brookhaven National Lab., Upton, NY (United States)). E802 Collaboration. Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. Contract DE-AC02-76CH00016. (CONF-9208245–: Budapest workshop on relativistic heavy ion collisions, Budapest (Hungary), 10-13 Aug 1992). In *Proceedings of the Budapest workshop on relativistic heavy ion collisions.* 149p. Order Number DE94611162. Source: OSTI; NTIS (US Sales Only); INIS.

In a series of experiments at the AGS, the E802 Collaboration has measured inclusive and semi-inclusive production of identified charged particles and two particle correlations, with global event characterization, using beams of 14.6 A GeV/c protons, ^{16}O, ^{28}Si on targets of Be, Al, Cu, Ag and Au. In April and May 1992, a ^{197}Au beam of momentum 11.56 A GeV/c was commissioned at the BNL-AGS Tandem Complex. Preliminary results of measurements from the first Au+Au run are presented as well as a review of other selected results. (K.A.) 11 refs.; 5 figs.

7724 (KFKI–1993-11/A, pp. 36-46) **Recent results from the NA44 Collaboration.** Loerstad, B. (Lund Univ. (Sweden). Dept. of Particle Physics). NA44 Collaboration. Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. (CONF-9208245–: Budapest workshop on relativistic heavy ion collisions, Budapest (Hungary), 10-13 Aug 1992). In *Proceedings of the Budapest workshop on relativistic heavy ion collisions.* 149p. Order Number DE94611162. Source: OSTI; NTIS (US Sales Only); INIS.

NA44 is a second generation experiment, optimized for the study of identified single and two particle distributions at mid-rapidity. The spectrometer is a focussing spectrometer, a design which optimizes the acceptance for pairs of particles with small momentum difference. High statistics allow studies of details of the correlation function. Data on the following subjects are discussed for low p_t enhancement in p+Pb and A+A data, $\pi^+\pi^+$ correlations, KK correlations, multidimensional analysis and the resonance influence on the correlation function as simulated by the Fritiof-Spacer model. (author) 8 refs.; 9 figs.; 3 tabs.

7725 (KFKI–1993-11/A, pp. 47-51) **Edgeworth expansion of Bose-Einstein correlation functions.** Hegyi, S. (Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics); Csoergoe, T. Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. (CONF-9208245–: Budapest workshop on relativistic heavy ion collisions, Budapest (Hungary), 10-13 Aug 1992). In *Proceedings of the Budapest workshop on relativistic heavy ion collisions.* 149p. Order Number DE94611162. Source: OSTI; NTIS (US Sales Only); INIS.

A systematic study of the shape of Bose-Einstein correlation functions is presented. The emphasis is made on the characterization of the degree of deviation from the pure Gaussian in terms of the cumulant moments higher than the second. The Edgeworth expansion of the correlation functions is shown to be well suited to measure how the non-Gaussian terms influence the extracted fitting parameters. As an illustrative example, the AFS and NA44 data for $C_2(Q_{inv})$ are analysed. It was found that the third and fourth cumulants have nonvanishing contribution to the shape of the correlation functions. (author) 9 refs.; 1 fig.; 3 tabs.

7726 (KFKI–1993-11/A, pp. 52-58) **Global characteristics of relativistic heavy-ion collisions at SPS, RHIC and LHC energies in string fusion model.** Bravina, L.V. (Bergen Univ. (Norway). Dept. of Pharmacology); Amelin, N.S.; Braun, M.A.; Pajares, C.; Csernai, L.P. Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. (CONF-9208245–: Budapest workshop on relativistic heavy ion collisions, Budapest (Hungary), 10-13 Aug 1992). In *Proceedings of the Budapest workshop on relativistic heavy ion collisions.* 149p. Order Number DE94611162. Source: OSTI; NTIS (US Sales Only); INIS.

Global characteristics of hh, hA and AA collisions at SPS, RHIC and LHC energies are examined within the Monte-Carlo String Fusion Model (SFM). The possible influence of the string fusion on the basic features of relativistic heavy-ion collisions is studied. Particularly, in AA interactions at ultra-relativistic energies, string fusion can lead to a reduction of multiple production with relative enhancement of the baryon component. (author) 25 refs.; 4 figs.

7727 (KFKI–1993-11/A, pp. 59-64) **Covariant transport theory for quark systems.** Vetter, T. (Justus-Liebig Univ., Giessen (Germany). Inst. fuer Theoretische Physik); Kalmbach, U.; Biro, T.S.; Mosel, U. Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. Order Number DE94611162. Source: OSTI; NTIS (US Sales Only); INIS.

Stationary soliton solutions of the coupled Vlasov and nonlinear Poisson equations were studied in order to describe the initial state of hadronic collisions within the framework of a one-dimensional semiclassical quark transport theory. General conditions were obtained for the existence of solitons analytically and present a simple scheme for its construction. The Vlasov equation was solved for a soliton initialized in such manner by the test-particle method, and the stability of the soliton, was verified. (author) 12 refs.; 3 figs.; 1 tab.

RNBT Collaboration. Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. (CONF-9208245–: Budapest workshop on relativistic heavy ion collisions, Budapest (Hungary), 10-13 Aug 1992). In *Proceedings of the Budapest workshop on relativistic heavy ion collisions.* 149p. Order Number DE94611162. Source: OSTI; NTIS (US Sales Only); INIS.

The question of how can one learn about the potentially exotic structure of radioactive beam nuclei and the interplay between nuclear structure and reaction mechanisms is addressed. A satisfactory treatment within a three-body model for the projectile requires a four-body continuum calculation. A phenomenological discussion is given based on the available data for ^6He and ^{11}Li projectiles. The data can be consistently understood in a picture where the high energy data mainly correspond to direct break-up of the projectile ground state in a Serber model, while the low energy data exhibit the fingerprint of a sequential break-up process via a narrow low-lying resonance, observed in ^6He but hitherto not identified in ^{11}Li. (K.A.) 45 refs.; 4 figs.

7729 (KFKI–1993-11/A, pp. 91-97) **The path of hot nuclei towards multifragmentation.** Papp, G. (Roland Eoetvoes Univ., Budapest (Hungary). Inst. for Theoretical Physics); Noerenberg, W. Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. Order Number DE94611162. Source: OSTI; NTIS (US Sales Only); INIS.

The projectile-like particle evolution of the Au+X high energy collision is studied in an extended evaporation model. The residue is calculated in the modified abrasion model, and its dynamical evolution into the instability region of nuclear matter is investigated. The calculated nuclei may be an input for statistical multifragmentation models. (author) 13 refs.; 5 figs.

7730 (KFKI–1993-11/A, pp. 98-106) **Intermittent pattern of dynamical fluctuations in relativistic heavy ion collisions.** Bao-An Li (Hahn-Meitner-Inst., Berlin (Germany). Bereich Kern- und Strahlenphysik). Hungarian Academy of Sciences, Budapest

(Hungary). Central Research Inst. for Physics. Apr 1993. (CONF-9208245--: Budapest workshop on relativistic heavy ion collisions, Budapest (Hungary), 10-13 Aug 1992). In *Proceedings of the Budapest workshop on relativistic heavy ion collisions.* 149p. Order Number DE94611162. Source: OSTI; NTIS (US Sales Only); INIS.

By performing hadronic transport model calculations for relativistic heavy ion collisions, properties of dynamical fluctuations from event to event are studied by calculating the reduced scaled factorial moments as a function of the bin size in pseudorapidity. The reduced scaled factorial moments of charged pions were found to show an intermittent behaviour due to the random cascading property of the reaction. Effects of mixing events of different impact parameters on the reduced scaled factorial moments have also been studied. Discrepancies between the model calculations and the experimental data are discussed. (author) 35 refs.; 4 figs.

7731 (KFKI-1993-11/A, pp. 113-119) **Pion dynamics and lepton pair production in heavy ion collisions.** Koch, P. (Regensburg Univ. (Germany). Inst. fuer Theoretische Physik). Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. (CONF-9208245--: Budapest workshop on relativistic heavy ion collisions, Budapest (Hungary), 10-13 Aug 1992). In *Proceedings of the Budapest workshop on relativistic heavy ion collisions.* 149p. Order Number DE94611162. Source: OSTI; NTIS (US Sales Only); INIS.

The production of lepton pairs with low invariant mass as probes for the pion dynamics in relativistic nuclear collisions is discussed in some detail. The implications of a possible large positive pion chemical potential for the production rate of lepton pairs are emphasized. A strong enhancement has been found in the low invariant mass region, $2m_{\pi} \leq M_{\mu+\mu-} \leq 600$ MeV, for lepton pairs which are produced via the annihilation of pions in the hot and dense collision zone. Calculations for dilepton mass spectra are presented based on different nuclear collision scenarios. It is found that the di-muon mass spectrum can serve as a useful probe to distinguish between these different scenarios. (author) 27 refs; 5 figs.

Order Number DE94611162. Source: OSTI; NTIS (US Sales Only); INIS.

A nonperturbative dynamical study of η-meson and pion production in heavy-ion collisions from 1 to 2 GeV/A bombarding energy is presented. The dynamical evolution of the nucleus-nucleus collision is described by a transport equation of the Boltzmann-Uehling-Uhlenbeck type evolving phase-space distribution functions. Furthermore, results are presented for differential dilepton yields in heavy-ion collisions. The sensitivity of the calculated yields to predicted changes of the ρ meson in dense matter is investigated and the feasibility to measure the time-like electromagnetic form factor of hadrons and their medium-dependence through the observation of dileptons is discussed. (author) 40 refs.; 11 figs.

Basing on a transport model of Boltzmann type the evolution of relevant degrees of freedom are studied in the course of ultrarelativistic heavy ion collisions. First the approach of dense parton matter is considered towards quark gluon plasma. The pre-equilibrium parton matter is found to represent an important source of continuum dileptons in the J/ψ region at very high beam energies (RHIC and LHC). Second dense off-equilibrium pion matter is analyzed. An approximately constant effective pion chemical potential has been found. Such a scenario results in a strongly increased dilepton yield from hadron matter near the kinematical threshold for producing muon pairs via pion annihilation. (author) 16 refs.; 5 figs.

7734 (KFKI-1993-11/A, pp. 135-137) **Collisions in an expanding pion gas and the $p_{perpendicular}$ spectrum in ultrarelativistic heavy ion collisions.** Barz, H.W. (Fachinformationszentrum Rossendorf (Germany). Inst. fuer Kern-und Hadronenphysik); Bertsch, G.; Danielewicz, P.; Schulz, H.; Welke, G.M. Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. (CONF-9208245--: Budapest workshop on relativistic heavy ion collisions, Budapest (Hungary), 10-13 Aug 1992). In *Proceedings of the Budapest workshop on relativistic heavy ion collisions.* 149p. Order Number DE94611162. Source: OSTI; NTIS (US Sales Only); INIS.

Neglecting the mean field effects, the bosonic Boltzmann equation was solved for an expanding gas of pions using the in-medium scattering matrix from a Bethe-Goldstone type equation. The increase of the scattering rate in the gas for large final state Bose occupancy factors in nearly compensated by an overall drop of the in-medium cross section. Investigating the effect of the $\pi\pi$ scattering in thermalizing the momentum distribution small values of the hadronization time are needed to obtain a strong enhancement at low $p_{perpendicular}$. (author) 11 refs.; 2 figs.

7735 (KFKI-1993-11/A, pp. 138-141) **Kalman filter as the third person of the Landsbergian scheme in heavy ions reactions.** Lukacs, B. (Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics); Racz, A. Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Apr 1993. (CONF-9208245--: Budapest workshop on relativistic heavy ion collisions, Budapest (Hungary), 10-13 Aug 1992). In *Proceedings of the Budapest workshop on relativistic heavy ion collisions.* 149p. Order Number DE94611162. Source: OSTI; NTIS (US Sales Only); INIS.

Energetic heavy ion collisions are generally not equilibrium processes in thermodynamic sense. Therefore, even the number of thermodynamic degrees of freedom is not a priori known. It is shown that a combination of Landsberg's scheme for finding the independent macroscopic variables and the Kalman filtering of systems analysis yields an operative tool for determining the degrees of freedom. The procedure is demonstrated on a simple example, which, however is a reaction definitely off local equilibrium. (author) 8 refs.; 1 fig.

Thesis. Submitted to University of George Washington, Washington, DC.

Several experiments have measured nominally-charge-symmetric scattering of pions from tritium (^{3}H) and ^{3}He. These experiments have covered incident pion energies from 142 MeV to 295 MeV and scattering angles up to 110° in the laboratory. The results have been used to study charge-symmetry breaking and nuclear scattering systematics. In the work I have extended these measurements to angles near 180° for pion energies of 142 MeV, 180 MeV, 220 MeV, and 256 MeV, which bracket the Δ_{33} pion-nucleon resonance. This is the most extensive set of πT and π^3He data in this kinematical region. It will allow tests of scattering theory of pion-nucleus interactions and charge-symmetry breaking in back-angle scattering, and, within the limits of these two theories, it may help improve our understanding of the structure of these nuclei.

7737 (LA--12691-T) **Pion single charge exchange in three body nuclei at intermediate energies.** Dowell, M.L. Los Alamos National Lab., NM (United States). Jan 1994. 244p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE94005617. Source: OSTI; NTIS; INIS; GPO Dep.

Thesis submitted to Massachusetts Institute of Technology, Cambridge, MA.

The purpose of this thesis is to present new experimental information about modifications to the pion-nucleon single charge exchange interaction, $\pi^+ n \rightarrow \pi^0 p$ or $\pi^- p \rightarrow \pi^0 n$, due to the presence of other nucleons. The results of two experimental studies of pion single charge exchange in the three nucleon system near the Δ-resonance are presented. Both of these experiments were performed at the Clinton P. Anderson Meson Physics Facility (LAMPF), a division of the Los Alamos National Laboratory. Each explored different aspects of pion single charge exchange in three body nuclei–^{3}He and ^{3}H. Since the nuclear wavefunctions of the three nucleon systems are believed to be well understood, it should be possible to perform theoretical calculations of pion interactions with this system and compare their predictions with the experimental results.

7738 (LBL–34724) **Multifragmentation: Surface and Coulomb instabilities of sheets, bubbles, and donuts.** Moretto, L.G.; Tso, Kin; Wozniak, G.J. Lawrence Berkeley Lab., CA (United States). Aug 1993. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-9309278–1: International workshop on dynamical features of nuclei and finite fermi systems, Barcelona (Spain), 13-17 Sep 1993). Order Number DE94003242. Source: OSTI; NTIS; INIS; GPO Dep.

Disks, bubbles, and donuts have been observed in dynamical calculations of heavy ion collisions. These shapes are subject to a variety of surface and Coulomb instabilities. These instabilities are identified and analyzed in terms of their relevance to multifragmentation.

7739 (UCRL-JC–112926) **Backward emission of protons in Au+Au collisions at 11.7 A.GeV/c.** Ahle, L. (Massachusetts Inst. of Tech., Cambridge, MA (United States)); Akiba, Y.; Beavis, D. Lawrence Livermore National Lab., CA (United States). Aug 1993. 4p. Sponsored by USDOE, Washington, DC (United States);National Aeronautics and Space Administration, Washington, DC (United States). DOE Contract W-7405-ENG-48 ; AC02-76CH00016 ; W-31109-ENG-38. (CONF-930636–11: 10. international conference on ultra-relativistic nucleus-nucleus collisions, Borlaenge (Sweden), 20-24 Jun 1993). Order Number DE94003637. Source: OSTI; NTIS; INIS; GPO Dep.

We present preliminary results for the emission of target rapidity protons in minimum bias and central 11.7 A.GeV/c Au+Au collisions. The data span the pseudo-rapidity range $|\eta| \leq 0.76$ and proton kinetic energy range of $50 \leq E \leq 200$ MeV. The slopes of the kinetic energy spectra and $dN/d\eta$ values for central and minimum bias collisions are strikingly similar. Comparison of the results to results for Si+Au and p+A shows that the shape of the $dN/d\eta$ distribution is independent of the reaction system or centrality suggesting that the spectator matter does not play a decisive role in determining the shape of the proton distributions at back angles for these systems at AGS energies.

A computer code has been written at the Pacific Northwest Laboratory (PNL) to synthesize the results of typical gamma ray spectroscopy experiments. The code, dubbed SYNTH, allows a user to specify physical characteristics of a gamma ray source, the quantity of the nuclides producing the radiation, the source-to-detector distance and the presence of absorbers, the type and size of the detector, and the electronic set up used to gather the data. In the process of specifying the parameters needed to synthesize a spectrum, several interesting intermediate results are produced, including a photopeak transmission function versus energy, a detector efficiency curve, and a weighted list of gamma and x rays produced from a set of nuclides. All of these intermediate results are available for graphical inspection and for printing. SYNTH runs on personal computers. It is menu driven and can be customized to user specifications. SYNTH contains robust support for coaxial germanium detectors and some support for sodium iodide detectors. SYNTH is not a finished product. A number of additional developments are planned. However, the existing code has been compared carefully to spectra obtained from National Institute for Standards and Technology (NIST) certified standards with very favorable results. Examples of the use of SYNTH and several spectral results are presented.

7741 (PNL-SA–22813) **Neutron interactions and atomic recoil spectra.** Greenwood, L.R. Pacific Northwest Lab., Richland, WA (United States). Aug 1993. 54p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9308204–1: International summer school on fundamentals of radiation damage, Urbana, IL (United States), 1-12 Aug 1993). Order Number DE94004774. Source: OSTI; NTIS; INIS; GPO Dep.

This chapters presents a discussion of neutron interactions with materials that lead to activation, transmutation, and atomic displacements. The emphasis will be on current applications including neutron irradiation facilities, neutron dosimetry techniques, and computer codes for spectral adjustment and radiation damage calculations.

7742 (PSI-PROC–93-01, pp. 313-329) **Quantum neutron optics.** Rauch, H. (Atominstitut der Oesterreichischen Universitaeten, Vienna (Austria)). 1993. 384p. (CONF-9308201–: 1. summer school on neutron scattering, Zuoz (Switzerland), 15-21 Aug 1993). In *Neutron scattering: Lecture notes of the first summer school on neutron scattering.* Order Number DE94611406.

The invention of neutron interferometry in 1974 stimulated many experiments related to the wave-particle dualism of quantum mechanics. Widely separated coherent beams can be produced within a perfect crystal interferometer which can be influenced by nuclear, magnetic and gravitational interaction. The verification of the 4π-symmetry of spinor wave functions and of the spin superposition law at a macroscopic scale and the observation of gravitational effects including the Sagnac effect have been widely debated in literature. The coupling of the neutron magnetic moment to resonator coils permitted the coherent energy exchange between the neutron quantum system and the macroscopic resonator. This phenomenon provided the basis for the observation of the magnetic Josephson effect with an energy sensitivity of 10^{-19} eV. Partial beam path detection experiments are in close connection with the development of quantum mechanical measurement theory. The very high sensitivity of neutron interferometry may be used in future for new fundamental-, solid-state and nuclear-physics application. A striking spectral modulation effect has been observed by means of a proper post-selection procedure under conditions where the spatial shift of the wave trains greatly exceeds the coherence length of the neutron beams traversing an interferometer. It is shown that Schroedinger-cat-like states are created by the superposition of two coherent states generated in the interferometer. These entangled states exhibit under certain circumstances characteristic squeezing phenomena indicating a highly non-classical behavior. Analogies with light optical experiments are discussed. (author) 10 figs., 66 refs.

7743 (PSI-PROC–93-01, pp. 331-357) **Neutron sources.** Bauer, G.S. (Paul Scherrer Inst. (PSI), Villigen (Switzerland)). 1993. 384p. (CONF-9308201–: 1. summer school on neutron scattering, Zuoz (Switzerland), 15-21 Aug 1993). In *Neutron scattering: Lecture notes of the first summer school on neutron scattering.* Order Number DE94611406.

There is an almost unlimited range of science in which neutron scattering plays an essential role in solving difficult and important problems. Unfortunately, suitable neutrons are not readily available.

Although about half of our world is made up of neutrons, they are tightly bound deep inside the atomic nucleus and quite difficult to set free. Facilities that accomplish this task in a manner useful for scientific and technological application are commonly called neutron sources. In the present context we are ultimately interested in providing "epithermal", "hot", "thermal" and "cold" neutrons. Obviously these temperatures ranges do not really characterize thermal properties of the neutrons themselves, but rather the temperature of the substance those neutrons were in thermal equilibrium with before leaking out through its surface. The exception are "epithermal" neutrons, which leak out during the slowing-down process before reaching thermal equilibrium. In this paper we will deal with ways to set free neutrons from the nuclei in the first place and to slow them down to useful energies afterwards. Actual designs of some types of "neutron sources" will be described in the light of their suitability for neutron scattering experiments and their prospects for further progress. 7744 (LBL–34728) **Magnetic, optical and charge-transfer spectra of antiferromagnetic solid α-O_2 and "paramagnetic" solid β-O_2: A small-cluster, many-electron calculation.** da Silva, A.J.R. (California Univ., Berkeley, CA (United States). Dept. of Physics); Falicov, L.M. California Univ., Berkeley, CA (United States). Dept. of Physics. Oct 1993. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-9308175–2: Latin American workshop on magnetism, Guanujuato (Mexico), 23-28 Aug 1993). Order Number DE94003248. Source: OSTI; NTIS; GPO Dep.

The electronic spectra of α and β solid O_2 were calculated in a full many-body approach for a cluster consisting of four O_2 molecules with periodic boundary conditions. By including only the partially occupied π orbitals (16 spin-orbitals, 8 electrons) the basis set consists of 12870 many-electron states. Use of the symmetry properties (group-theoretical analysis) simplifies the problem considerably. Resulting spectra – with phenomenological Hamiltonian parameters obtained from experiment – consist of separate regions: (a) 81 states corresponding to the ground state and low-energy magnetic excitations (magnons); (b) 1215 states of neutral molecular excitations (excitons); and (c) 11574 charge-transfer states (conducting high-energy states). Analysis of the properties of the ground states in both α and β solid O_2 has been carried out.

7745 (ANL/ER/PP–77881) **Double excitation of He and H^- by fast proton and anti-proton impact.** Hino, Ken-ichi (University of Electro-Communications, Chofu, Tokyo (Japan)); Moribayashi, K.; Nagase, M.; Matsuzawa, M.; Kimura, M. Argonne National Lab., IL (United States). [1993]. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE94004581. Source: OSTI; NTIS; INIS; GPO Dep.

Theoretical investigation has been made on double excitation processes of He and H^- by fast proton and anti-proton impact in the MeV/u-energy region. The cross sections are calculated by use of both the close-coupling and the perturbation expansion methods, and the wave functions of target atoms are generated based on the hyperspherical coordinate method. The excitation to the $2p^2\ ^1D^e$ state of H^- by anti-proton impact is dominant by about three times in comparison with that by proton impact at the incident energy of 0.1 MeV/u. The spectral shape of an ejected electron from the $2s2p\ ^1p^o$ state of H^- at the incident energy of 1.5 MeV/u is consistent with the line profile of the H^- photodetachment observed by Bryant et al.

Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-88ER13844. Order Number DE94003948. Source: OST!; NTIS; INIS; GPO Dep.

The object of this research is to study reactivity at superthermal collision energies using a fast neutral beam that is generated by photodetachment. Systems scheduled for initial study include basic oxygen-hydrogen reactions. Unfortunately, we can not yet report realization of this goal, but during this funding period we have made advances that are anticipated to lead to successful measurements during the next year. The parameters described below refer to the model system $O + H_2 \rightarrow OH + H$. The basic design involves the collision of fast neutrals, created by photodetachment of the corresponding negative molecular ion, with a stable reactant gas in a collision cell. Products are detected by ionization and mass analysis. We are equipped to study rotational effects on reactivity by comparing results for rotational levels J = 0 and 1 of H_2. Highlights during the funding period are given in this report.

7747 (DOE/ER/13849–6) **Low energy ion-molecule reactions and chemilonization kinetics: Progress report, February 1, 1991–January 31, 1994.** Farrar, J.M. Rochester Univ., NY (United States). 26 Jul 1993. 20p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-88ER13849. Order Number DE94005414. Source: OSTI; NTIS; GPO Dep.

Work over the past 3 years was directed toward the dynamics of elementary gas phase proton transfer reactions, particularly those of the O^- ion. Such reactions are important in flames. Published work over the past 30 months was concerned with dynamics of reactions of O^- with H_2O, NH_3, and HF. Results are enumerated here.

7748 (LA–12604-MS) **Relativistic collision rate calculations for electron-air interactions.** Graham, G. (EG and G Energy Measurements, Inc., Los Alamos, NM (United States)); Roussel-Dupre, R. Los Alamos National Lab., NM (United States). Dec 1993. 51p. Sponsored by USDOE, Washington, DC (United States);Department of Defense, Washington, DC (United States). DOE Contract W-7405-ENG-36 ; AC08-93NV11265. Order Number DE94004204. Source: OSTI; NTIS; GPO Dep.

The most recent data available on differential cross sections for electron-air interactions are used to calculate the avalanche, momentum transfer, and energy loss rates that enter into the fluid equations. Data for the important elastic, inelastic, and ionizing processes are generally available out to electron energies of 1–10 keV. Prescriptions for extending these cross sections to the relativistic regime are presented. The angular dependence of the cross sections is included where data are available as is the doubly differential cross section for ionizing collisions. The collision rates are computed by taking moments of the Boltzmann collision integrals with the assumption that the electron momentum distribution function is given by the Juettner distribution function which satisfies the relativistic H- theorem and which reduces to the familiar Maxwellian velocity distribution in the nonrelativistic regime. The distribution function is parameterized in terms of the electron density, mean momentum, and thermal energy and the rates are therefore computed on a two dimensional grid as a function of mean kinetic energy and thermal energy.

7749 (BNL–49777) **Low frequency dynamics of CO/Cu-breakdown of Born-Oppenheimer approximation.** Hirschmugl, C. (Yale Univ., New Haven, CT (United States)); Williams, G.P.; Chabal, Y.J.; Hoffmann, F.M. Brookhaven National Lab., Upton, NY (United States). [1993]. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-9311104–16: 40. national symposium of the American Vacuum Society (AVS), Orlando, FL (United States), 15-19 Nov 1993). Order Number DE94005508. Source: OSTI; NTIS; GPO Dep.

Synchrotron infrared studies of adsorbates on surfaces offer the possibility of probing low frequency vibrational modes and dynamics at high resolution (1 cm^{-1}, 125 μeV). Extensive experiments have been performed for ordered submonolayers of CO on low index Cu surfaces [($\sqrt{3}$ x $\sqrt{3}$)R30° CO/Cu(1ll), c(2 x 2) CO/Cu(100) and (1 x 2) CO/Cu(l10)], in the 100-2500 cm^{-1} (~12.5 – 312.5 MeV) range. These are the first IR experiments to directly probe the adsorbate-substrate vibrations for this system. In addition, however, several surprising features are observed including the dipole-forbidden hindered rotation and an unexpected broad-band absorption. Two theories have been motivated by this work, and will be compared to our experimental results. The first theory is a cluster calculation by Head-Gordon and Tully, which takes into account the breakdown of the Born-Oppenheimer approximation and predicts lifetimes and frequencies of the vibrational modes for CO/Cu(100). Another Drude-based theory, proposed by Persson, considers the coupling of the conduction electron current to the vibrations of the adsorbates, accounting for the observation of both the broad-band absorption and dipole-forbidden peak.

7750 (BNL–49782) **Surface modes and chiral symmetry (Wilson fermions in a box).** Creutz, M.; Horvath, I. Brookhaven National Lab., Upton, NY (United States). Dec 1993. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-9310250–2: LATTICE 93: international symposium on lattice field theory, Dallas, TX (United States), 12-17 Oct 1993). Order Number DE94004946. Source: OSTI; NTIS; INIS; GPO Dep.

We give a Hamiltonian discussion of surface states in an extra dimension as a basis for chiral fermions in lattice models. Such modes appear with the Wilson fermion action when the hopping parameter exceeds a critical value. The association of such states with the closing and reopening of a band gap was noted by Shockley in 1939.

European Research Conferences are held all over Europe. The conferences are intended to provide an open forum for discussions of the latest developments in the field of interested by participants from all nations. At this particular conference in Greece, the European leaders (and some also from the US) met to discuss the state of the art of computing electronic structure of solids, with special emphasis on properties of surfaces, interfaces, and localized defects. In Germany, the conference focused more specifically on the use of approximate electronic structure methods for large or complex systems, where more rigorous methods are too expensive. At both conferences, the author presented recent advancements in the calculations of electronic properties of large systems, based on the new density-matrix method.

During the past year we have continued our work on the mirror-corrected high resolution STEM. We have made significant progress in the design and fabrication of the various microscope sub-systems and have completed a new display system. Additional calculations and computer simulations have been performed to confirm the original theory of mirror correctors. In our biological work we have made a careful study of the structure of globins, vertebrate and invertebrate, using the accumulated information contained in the Brookhaven Data Bank (3D structures), the Protein Identification Resource (ID sequences) and the data we have obtained with the STEM. Statistical templates have been generated to predict various classes of globins.

7753 (DOE/FTR–94000999) **Travel to Scotland and Switzerland to participate in the 5th International Conference on Hopping and Related Phenomena: Foreign trip report, August 29, 1993–September 11, 1993.** Emin, D. Sandia National Labs., Albuquerque, NM (United States). [1993]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. Order Number DE94000999. Source: OSTI; NTIS (US Sales Only); GPO Dep.

Hopping conduction is a subject area that encompasses incoherent transport of electrons, atoms or energy. The biannual hopping conference focuses on fundamental studies of these phenomena. The primary topic discussed at this meeting was hopping of electrons between very low densities, 10^{16} cm^{-3}, of large-radius (about 100 Å) dopants in semiconductors. These phenomena are studied at very low temperatures, often < 1 K. However, important hopping phenomena also occur between high densities, < 10^{21} cm^{-3}, of well-localized states, radii < 5 Å, often up to the melting point of solids. Higher-temperature hopping phenomena are commonly found in amorphous semiconductors, polymers, ceramics and biological materials. It is becoming increasingly clear that these two classes of hopping phenomena differ from one another in fundamental ways. At Ecole Polytechnique Federale de Lausanne (EPFL) electronic hopping in conducting polymers was discussed in considerable detail. In addition, plans were made to collaborate in studying the distinctive bonding of boron-rich solids by exposing these materials to intense high-energy bombardment with electrons. Plans to measure electronic transport properties of boron carbides were also developed. Finally, an extension of a present collaboration with M.-N. Bussac (Ecole Polytechnique, France) was planned in which the effects of disorder on the temporal relaxation of carriers injected into insulators is to be investigated.

7754 (DOE/OR/00033–T564) **Resonant holographic measurements of laser ablation plume expansion in vacuum and argon gas backgrounds.** Lindley, R.A. (Michigan Univ., Ann Arbor, MI (United States)). Oak Ridge Inst. for Science and Education, TN (United States); Michigan Univ., Ann Arbor, MI (United States). 1993. 189p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-76OR00033. Order Number DE94001407. Source: OSTI; NTIS; INIS; GPO Dep.

This thesis discusses the following on resonant holographic measurements of laser ablation plume expansion: Introduction to laser ablation; applications of laser ablation; The study of plume expansion; holographic interferometry; resonant holographic interferometry; accounting for finite laser bandwidth; The solution for doppler broadening and finite bandwidth; the main optical table; the lumonics laser spot shape; developing and reconstructing the holograms; plume expansion in RF/Plasma Environments; Determining λ_o; resonant refraction effects; fringe shift interpretation; shot-to-shot consistency; laser ablation in vacuum and low pressure, inert, background gas; theoretically modeling plume expansion in vacuum and low pressure, inert, background gas; and laser ablation in higher pressure, inert, background gas.

7755 (IS-T–1664) **RHEED studies of the nucleation, growth, and mobility of Ag atoms on the Si(111)7 x 7 surface.** Roos, K.R. Ames Lab., IA (United States). Jul 1993. 98p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-82. Order Number DE94005551. Source: OSTI; NTIS; INIS; GPO Dep.

The low temperature and flux dependent growth of ultrathin Ag films on the Si(111)7x7 surface is studied with Reflection High-Energy Electron Diffraction (RHEED). The grazing incidence geometry of RHEED allows for an incident molecular beam normal to the surface, and makes it an ideal surface probe for studying ultrathin film growth in real time. Short-lived oscillations in the diffracted intensity are observed during Ag deposition at 150 K, indicating quasi-layer-by-layer growth mediated by adatom mobility. When the 150 K growth is performed over a wide range of deposition rates F, the peak intensity is observed to scale, i.e. I(Ft) depends only on the total amount deposited, which implies thermally activated diffusion is absent at 150 K. Scaling is not obeyed at higher temperatures ($T \geq 473$ K) for the growth of the $\sqrt{3} \times \sqrt{3}$ R30° ($\sqrt{3}$) superstructure. Testing for scaling of the diffracted intensity constitutes a new experimental method which can be applied generally to determine if thermal diffusion is active at a particular temperature. Scaling is consistent with a constant diffusion length R_0, independent of substrate temperature and deposition rate. The presence of a non-thermal diffusion mechanism (responsible for the constant diffusion length R_0) is confirmed by monitoring the flux dependence of the $\sqrt{3}$ superstructure growth during deposition at $T \geq 473$ K. At these temperatures the total diffusion length R is given by $R=R_0+(4Dt)^{1/2}$, where $(4Dt)^{1/2}$ is the thermal component. A non-zero intercept R_0 is found by plotting the peak intensity $I_p^{1/2}$ (a measure of the average domain size) vs. deposition rate $F^{-1/2}$ (F^{-1} is proportional to the available diffusion time.) From the FWHM of a low coverage (0.2 ML) $\sqrt{3}$ spot, an estimation of 50 Å is made for a lower bound of the magnitude of R_0.

7756 (LBL–31791) **Scalar operators in solid-state NMR.** Sun, Boqin. Lawrence Berkeley Lab., CA (United States). Nov 1991. 260p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE94005211. Source: OSTI; NTIS; GPO Dep.

Selectivity and resolution of solid-state NMR spectra are determined by dispersion of local magnetic fields originating from relaxation effects and orientation-dependent resonant frequencies of spin nuclei. Theoretically, the orientation-dependent resonant frequencies can be represented by a set of irreducible tensors. Among these tensors, only zero rank tensors (scalar operators) are capable of providing high resolution NMR spectra. This thesis presents a series of new developments in high resolution solid-state NMR concerning the reconstruction of various scalar operators motion in solid C_{60} is analyzed.

7757 (PIYaF–1800) **Neutron scattering and antiferromagnetic fluctuations in high-T_c superconductors below T_c.** Maleev, S.V. AN SSSR, Leningrad (Russian Federation). Inst. Yadernoj Fiziki. Jun 1992. 23p. Order Number DE94611521. Source: OSTI; NTIS (US Sales Only); INIS.

The magnetic neutron scattering in the high-T_c superconductors at $T << T_c$ is considered theoretically on the base of the nesting theory. It is shown that only three variants of the gap functions discussed in the literature are compatible with the neutron scattering data: the d-wave gap, the p-wave gap and the mixture of the d-wave gap and the extended s-wave gap functions with the real coefficients. In all these cases the threshold energy for inelastic neutron scattering at the 2D antiferromagnetic Bragg point Q_vector_0 is equal to $2—\mu—$ where μ is the chemical potential. Below this energy the scattering at Q-vector=Q-$vector_0$ is forbidden. However the scattering at Q-vector≃Q-$vector_0$ has to take place and as a result the Q-vector-dependence of the scattering is 'incommensurate' at $\omega \leq 2—\mu—$. In the case of d-wave gap function calculated $Im\chi$(Q-vector, ω) with the reasonable choice of the parameters is in a qualitative agreement with the experimental results. 32 refs.; 3 figs.; 2 tabs.

7758 (PIYaF–1804) **Distribution of captured flux at the Josephson medium.** Aksel'rod, L.A.; Gordeev, G.P.; Zabenkin, V.N.; Kolkhidashvili, M.R.; Lazebnik, I.M.; Ploshchanskaya, E.L.; Sbitnev, V.I. AN SSSR, Leningrad (Russian Federation). Inst. Yadernoj Fiziki. Jun 1992. 24p. (In Russian). Order Number DE94611522. Source: OSTI; NTIS (US Sales Only); INIS.

The patterns of a distribution of inner fields in the ceramic sample Y-Ba-Cu-O are obtained by means of the neutron polarized beam scanning. The information about the Josephson screening currents is extracted from these patterns for the fields smaller than a low critical field of grains. Dependencies of the screening currents versus the inner field B near the sample boundary and in its depth are distinguished with one another. Maximum accessible values of screening current densities are corresponded to a critical current whose linear fashion depends on the field B. From this dependence an initial critical current density J_0 and a characteristic spatial scale are extracted. 14 refs.; 11 figs.

7759 (PIYaF–1814) **Electronic structure of Pr doped into superconducting Bi-Pb-Sr-Ca-Cu-O ceramics.** Egorov, A.I.; Karazhanova, G.I.; Smirnov, Yu.P.; Sovestnov, A.E.; Tyunis, A.V.; Shaburov, V.A. AN SSSR, Leningrad (Russian Federation). Inst. Yadernoj Fiziki. Jul 1992. 17p. (In Russian). Order Number DE94611523. Source: OSTI; NTIS (US Sales Only); INIS.

The shift of K_{α_1} and K_{β_1} X-ray lines of Pr in HTS-ceramic $Bi_{1.7}Pb_{0.3}Sr_{2-x}Pr_xCa_2Cu_3O_y$ ($0,10 \leq x \leq 0,50$, refer to PrF_3) are measured experimentally. The valence m(x), the charge q(x) and the 4f(x)-, 5d(x)-levels population of Pr are determined from experimental shifts. It is found that the Pr valence is near 3; the small valence increasing $m \simeq 3,04$ at x=0,1 is observed. The small of Pr 5d-electron localization in ceramics in comparison with PrF_3 is revealed (≈0,1-0,2 5d-electron per Pr-atom). The probable cause of the superconductivity suppression in $Y_{1-x}Pr_xBa_2Cu_3O_{7-\delta}$ system is discussed. 26 refs.; 6 figs.; 1 tab.

7760 (PSI-PROC–93-01) **Neutron scattering: Lecture notes of the first summer school on neutron scattering.** Furrer, A. (ed.). No corporate text available. 1993. 384p. (CONF-9308201–: 1. summer school on neutron scattering, Zuoz (Switzerland), 15-21 Aug 1993). Order Number DE94611406. Source: OSTI; NTIS (US Sales Only); INIS.

This report contains the text of 16 lectures given at the Summer School and the report on a panel discussion entitled "the relative merits and complementarities of x-rays, synchrotron radiation, steady- and pulsed neutron sources". figs., tabs., refs.

7761 (PSI-PROC–93-01, pp. 1-50) **Instruments for neutron scattering.** Bauer, G.S. (Paul Scherrer Inst. (PSI), Villigen (Switzerland)); Buehrer, W. 1993. 384p. (CONF-9308201–: 1. summer school on neutron scattering, Zuoz (Switzerland), 15-21 Aug 1993). In *Neutron scattering: Lecture notes of the first summer school on neutron scattering.* Order Number DE94611406.

In this paper we will introduce the principles and concepts necessary to understand what one is doing if one performs an experiment on a certain instrument. We will describe the components of which almost all neutron scattering instruments are made up and their functions and show how these components can be combined to contribute in the best possible way to the solution of questions in a large number of scientific areas. (author) 50 figs., 10 refs.

7762 (PSI-PROC–93-01, pp. 51-71) **Basic concepts for the interpretation of neutron scattering experiments at an atomic level of description.** Lovesey, S.W. (Rutherford Appleton Lab., Chilton (United Kingdom)). 1993. 384p. (CONF-9308201–: 1. summer school on neutron scattering, Zuoz (Switzerland), 15-21 Aug 1993). In *Neutron scattering: Lecture notes of the first summer school on neutron scattering.* Order Number DE94611406.

The aim of this note is to provide some information on basic concepts for the interpretation of neutron scattering experiments at an atomic level of description. The presentation is very much at the descriptive level, so there are no examples of the actual working out (algebra) to be done in arriving at results. Readers who wish to see such detail can consult one of the many cited review articles and books. (author) 2 figs., 1 tab., 21 refs.

7763 (PSI-PROC–93-01, pp. 73-95) **Neutron diffraction from polycrystalline materials.** Rodriguez-Carvajal, J. (Laboratoire Leon Brillouin (LLB) - Centre d'Etudes de Saclay , 91 - Gif-sur-Yvette (France)). 1993. 384p. (CONF-9308201–: 1. summer school on neutron scattering, Zuoz (Switzerland), 15-21 Aug 1993). In *Neutron scattering: Lecture notes of the first summer school on neutron scattering.* Order Number DE94611406.

In this note we give a short review, at an introductory level, of some topics concerning the study of crystal structures by means of

neutron powder diffraction. A summary of the relevant scattering formulae used for the analysis of powder diffraction data is given. The specific characteristics of neutrons versus X-rays and electrons are emphasized in terms of atomic scattering lengths and absorption cross sections. Some aspects of the resolution of powder diffractometers are discussed in relation with the capacity to refine crystal structures with different degree of complexity and some problems related with crystal structure determination from powder data are discussed. The use of neutron powder diffraction for determining crystal structures of defective materials is illustrated in different cases. Particularly important is the extension of the Rietveld method to investigate the microstructure of solids where the defects cause an anisotropic broadening of the Bragg reflections. (author) 8 figs., 1 tab., 17 refs.

7764 (PSI-PROC–93-01, pp. 97-110) **Neutron diffraction from single crystals.** Heger, G. (Laboratoire Leon Brillouin (LLB) - Centre d'Etudes de Saclay , 91 - Gif-sur-Yvette (France)). 1993. 384p. (CONF-9308201–: 1. summer school on neutron scattering, Zuoz (Switzerland), 15-21 Aug 1993). In *Neutron scattering: Lecture notes of the first summer school on neutron scattering.* Order Number DE94611406.

Standard structure analysis on single crystals is a domain of X-ray diffraction (using conventional laboratory equipment) as far as the determination of space group symmetry, cell parameters and the structure model (of non-hydrogen atoms) are concerned. The aim of this lecture is to discuss special cases, for which, in addition to this indispensable part, neutrons are required to solve structural problems. Typical examples of single crystal neutron diffraction studies in the field of small molecular systems are presented here. Powder neutron diffraction applications are treated in a separate lecture and will not be considered. (author) 16 figs., 10 refs.

7765 (PSI-PROC–93-01, pp. 111-127) **Structural excitations.** Dorner, B. (Institut Max von Laue - Paul Langevin (ILL), 38 - Grenoble (France)). 1993. 384p. (CONF-9308201–: 1. summer school on neutron scattering, Zuoz (Switzerland), 15-21 Aug 1993). In *Neutron scattering: Lecture notes of the first summer school on neutron scattering.* Order Number DE94611406.

The main emphasis of this paper concerns lattice dynamics. In particular the investigation of phonon dispersion branches and the determination of eigenvectors are discussed. Most of the experiments were performed at the High Flux Reactor of the ILL in Grenoble in close collaboration with many colleagues from outside laboratories. (author) 11 figs., 13 refs.

7766 (PSI-PROC–93-01, pp. 129-156) **Homogeneous linear polymers in solution and binary mixtures.** Schwahn, D. (Forschungszentrum Juelich GmbH (Germany). Inst. fuer Festkoerperforschung). 1993. 384p. (CONF-9308201–: 1. summer school on neutron scattering, Zuoz (Switzerland), 15-21 Aug 1993). In *Neutron scattering: Lecture notes of the first summer school on neutron scattering.* Order Number DE94611406.

In this lecture I discuss equilibrium properties of linear and homogeneous polymers and limit myself to the "global" properties of the polymer. This means that the chemical structure of the repeat unit, the monomer, is irrelevant in this context. The content of the lecture is as follows: classification of polymers in solution, scattering laws of polymers in solution and binary polymer blends for small scattering vectors with respect to the inverse size of the polymer, conformation of polymers in solution and melt, and composition fluctuations in mixed binary polymer blends. (author) figs., tabs, 13 refs.

7767 (PSI-PROC–93-01, pp. 157-176) **Neutron scattering in biology.** Timmins, P.A. (Institut Max von Laue - Paul Langevin (ILL), 38 - Grenoble (France)). 1993. 384p. (CONF-9308201–: 1. summer school on neutron scattering, Zuoz (Switzerland), 15-21 Aug 1993). In *Neutron scattering: Lecture notes of the first summer school on neutron scattering.* Order Number DE94611406.

The following topics are treated in this lecture: high resolution neutron crystallography of macromolecules, small angle neutron scattering (SANS) from solutions and low resolution crystallography. 15 figs., refs.

7768 (PSI-PROC–93-01, pp. 177-188) **Neutron scattering from solutions.** Helm, L. (Lausanne Univ., Inst. de chimie minerale et analytique, Lausanne (Switzerland)). 1993. 384p. (CONF-9308201–: 1. summer school on neutron scattering, Zuoz (Switzerland), 15-21 Aug 1993). In *Neutron scattering: Lecture notes of the first summer school on neutron scattering.* Order Number DE94611406.

A general description of neutron scattering on liquids is given. The main topic of this report is on the method of differences and its applications to aqueous and non-aqueous solutions of electrolytes. It is shown that the method yields precise structural information about the first coordination sphere of ions. Recent results on aqueous solution of lanthanide(III) ions as well as non-aqueous solution of Ni^{2+} are reported. (author) 8 figs., 11 refs.

7769 (PSI-PROC–93-01, pp. 189-197) **Polarized neutrons.** Boeni, P. (Paul Scherrer Inst. (PSI), Villigen (Switzerland)). 1993. 384p. (CONF-9308201–: 1. summer school on neutron scattering, Zuoz (Switzerland), 15-21 Aug 1993). In *Neutron scattering: Lecture notes of the first summer school on neutron scattering.* Order Number DE94611406.

Experiments which determine the polarization of the incident and the scattered neutrons provide more information about the scattering system than unpolarized beam experiments. By measuring the spin dependent cross sections it is possible not only to distinguish between nuclear and magnetic scattering contributions, it is also possible to discriminate between coherent and incoherent scattering, i.e. between self and collective correlations and between different modes of magnetic excitations. We shall discuss after a short description of the polarization analysis technique some typical examples of recent measurements on magnetic systems like $YBa_2Cu_3O_7$ and EuS. (author) 11 figs., 31 refs.

7770 (PSI-PROC–93-01, pp. 199-234) **Magnetic structures.** Fischer, P. (Paul Scherrer Inst. (PSI), Villigen (Switzerland)). 1993. 384p. (CONF-9308201–: 1. summer school on neutron scattering, Zuoz (Switzerland), 15-21 Aug 1993). In *Neutron scattering: Lecture notes of the first summer school on neutron scattering.* Order Number DE94611406.

As an introduction to the important application of neutron scattering techniques to the investigation of magnetic ordering phenomena in condensed matter relevant theoretical aspects will be sketched and illustrative experimental results will be discussed. (author) 24 figs., tabs., 50 refs.

7771 (PSI-PROC–93-01, pp. 235-252) **Magnetic excitations.** Lander, G.H. (Commission of the European Communities, Karlsruhe (Germany). European Inst. for Transuranium Elements). 1993. 384p. (CONF-9308201–: 1. summer school on neutron scattering, Zuoz (Switzerland), 15-21 Aug 1993). In *Neutron scattering: Lecture notes of the first summer school on neutron scattering.* Order Number DE94611406.

After a brief discussion of the magnetic cross, I present some of the well-known examples of magnetic excitations, such as in Ni, and Gd. In the limit of small exchange interactions and localized-electron states, the excitation spectra consist of crystal-field and spin-orbit levels. An example is given of such excitations in the new high T_c materials containing rare-earths. Finally, I discuss the magnetic excitation spectra in the important case in which an interaction occurs between the valence and conduction-electron states. Such interactions give rise to intermediate valence states, the Kondo, and heavy-fermion ground states, and (possibly) the superconductivity in high T_c materials. (author) 9 figs., 19 refs.

7773 (PSI-PROC–93-01, pp. 273-293) **Wide- and small-angle diffuse scattering from metals and alloys.** Kostorz, G. (Eidgenoessische Technische Hochschule, Inst. fuer Angewandte Physik, Zurich (Switzerland)). 1993. 384p. (CONF-9308201–: 1. summer school on neutron scattering, Zuoz (Switzerland), 15-21 Aug 1993). In *Neutron scattering: Lecture notes of the first summer school on neutron scattering.* Order Number DE94611406.

While the coherent elastic scattering of a perfect crystal is restricted to the Bragg peaks characteristic for the (average) structure, real crystals show scattering around and between Bragg peaks. The elastic part of this scattering (elastic diffuse scattering) contains information on the occupation of lattice sites and on local displacements. In an initially homogeneous alloy (quenched solid solution) local ordering or phase separation may occur on the way towards thermodynamic equilibrium. The various diffuse scattering effects, including those around the incident beam, are discussed and illustrated by recent results on short-range order and decomposition in Ni and Cu alloys. (author) 12 figs., 87 refs.

7774 (PSI-PROC–93-01, pp. 295-312) **Neutron and x-ray scattering from amorphous systems.** Lamparter, P. (Max-Planck-Institut fuer Metallforschung, Stuttgart (Germany). Inst. fuer Physik). 1993. 384p. (CONF-9308201–: 1. summer school on neutron scattering, Zuoz (Switzerland), 15-21 Aug 1993). In *Neutron scattering: Lecture notes of the first summer school on neutron scattering.* Order Number DE94611406.

The application of neutron scattering for the investigation of the structure of amorphous materials is illustrated by means of some selected examples. These examples were taken from the group of amorphous metallic alloys, the so-called metallic glasses, however the described experimental and data-reduction procedures apply to amorphous and liquid alloys in general. Comparison with x-ray scattering is made in some cases to illustrate the complementary properties of both probes. Structural aspects of metallic glasses are treated only as far as neutron (and x-ray) diffraction is concerned. A more detailed description of the structure of amorphous and molten alloys may be found in a recent review article. Three-dimensional structural models are briefly described as a possibility to overcome the limitations of diffraction methods which yield one-dimensional information only. Hydrogen in amorphous materials, as a challenge for neutron scattering studies, is a special topic. (author) 12 figs., 24 refs.

7775 (PSI-PROC–93-01, pp. 359-368) **Panel discussion on the relative merits and complementarities of x-rays, synchrotron radiation, steady state- and pulsed neutron sources.** Bauer, G. (Paul Scherrer Inst. (PSI), Villigen (Switzerland)). 1993. 384p. (CONF-9308201–: 1. summer school on neutron scattering, Zuoz (Switzerland), 15-21 Aug 1993). In *Neutron scattering: Lecture notes of the first summer school on neutron scattering.* Order Number DE94611406.

The topics of the panel discussion were: structure determination by diffraction methods, excitations, elastic disorder scattering, magnetic structures and excitations, and an outlook.

The quantum effects in the total intensity of radiation at channeling have been considered. It is shown that the problem can be considered in frame of magnetic bremsstrahlung limit. In a region, where quantum effects are weak, the general formulae have been obtained for quantum corrections to the total intensity of the channeling radiation. While in diamond and silicon the quantum effects become noticeable at energy of order 5 GeV, in tungsten the quantum effects lead to appreciable decreasing the radiation intensity already at energy 1 GeV: order of 25% at room temperature and 34% at T=77 K. 9 refs.; 3 figs.

Oak Ridge National Lab., TN (United States). [1993]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From Materials Research Society meeting; Pittsburgh, PA (United States); 29 Nov - 3 dec 1993. Order Number DE94004793. Source: OSTI; NTIS; GPO Dep.

At cryogenic temperatures, the accumulation of vacancy-interstitial pairs in Al_2O_3 from atomic displacements associated with ion implantation produces amorphization. At room temperature, these pairs recombine, and amorphization occurs only at high doses. X-ray reflectivity measurements show that amorphization of the surface of Al_2O_3 implanted at room temperature with 160 keV Cr^+ ions is preceded by a progressive reduction in near-surface density. Monte Carlo simulations show that this density reduction can be accounted for by high-energy-transfer collisions which knock atoms deep into the target, leaving widely separated vacancies and interstitials, which do not recombine. Electron microscopy shows that at least some of these vacancies condense into voids. We propose that this reduction in near-surface density can lead to amorphization at high doses. We present simple approximations for the density reduction expected for different ions and targets.

Among alkali halide crystals, LiF occupies a special place because of its extreme properties. The crystal is almost insoluble in water, the cation-anion distance is the shortest, and the Li+ ion has the smallest radius. Additive coloration does not work, and it is difficult to obtain a sample containing only F centers when irradiated with gamma rays, X-rays, electrons or other high energy particles. The luminescence of the F center, expected around 900 nm on the basis of a power law of the dielectric constant, has never been observed up to now, while emission bands from the aggregated centers span the visible and the near infrared region with high quantum efficiency. The F absorption band, centered around 240 nm, is located in the UV region, which contains the luminescence excitation bands of several other color centers and shows other interesting features related to excitons absorption. This work reports on the study of the emission induced in LiF crystals colored with gamma rays by pumping the F band with the 284 nm line of a KrF excimer laser.

7779 (ENEA-RT-INN–92-18, pp. 13-15) **Optical gain of F2 and F3 centers in thin and colored layers of LIF.** Cremona, M. (ENEA, Frascati (Italy). Dipt. Sviluppo Tecnologie di Punta); Baldacchini, G.; Montereali, R.M.; Scavarda do Carmo, L.C. ENEA, Frascati (Italy). Dipt. Sviluppo Tecnologie di Punta. Nov 1992. Laser emission in the visible range has been obtained at room temperature in LiF crystals containing F_2 and F_3^+ color centers, which are produced at a concentration of 10^17 cm^{-3} by using ionizing radiations. On the contrary, low energy electrons allow, with their limited penetration depth, the creation of a thin layer with a high concentration of defects located at the surface of the crystalline material. This technique has already been investigated for applications in the area of high density mass memory making use of inhomogeneous broadening on zero-phonon lines. Moreover, the

present trends on miniaturization of opto-electronic devices calls for an exaustive investigation on the optical properties of color centers produced in volumes of sub-micron scale. Therefore, systematic research was undertaken in this direction and this paper reports the first measurements of optical gain at room temperature of F_2 and F_3^+ centers produced in a thin layer of LiF bulk and films.

7780 (ENEA-RT-INN–92-18, pp. 17-19) **KCl films: Photoluminescence of F-aggregate centres.** Somma, F. (Rome Univ. (Italy). Dipt. di Fisica); Ercoli, A.; Scacco, A.; Nunes, R.A.; Cremona, M.; Montereali, R.M.; Scavarda do Carmo, L.C. ENEA, Frascati (Italy). Dipt. Sviluppo Tecnologie di Punta. Nov 1992. (CONF-920816–: International conference on defects in insulating materials, Nordkirchen (Germany), 16-22 Aug 1992). In *Contributions to International conference on defects in insulating materials.* 19p. Order Number DE93522969. Source: OSTI; NTIS (US Sales Only).

Present interest in miniaturization has fostered developments in the area of production and characterzation of thin films. Alkali halide films have been studied with special concern for their optical and electrical properties. Colour centres, created in these films, exhibit optical absorption and emission bands which can be used in optical micro-devices. In this work, large concentrations of F and F-aggregate centres were obtained by electron irradiation on KCl films, and the main features of the photoluminescence properties of the defects were for the first time systematically investigated.

7781 (ORNL/FTR–4759) **Travel to Japan and Greece to attend and present invited talks at the International Union of Materials Research Society – The 3rd International Conference on Advanced Materials: Foreign trip report, August 21, 1993–September 17, 1993.** Geohegan, D.B. Oak Ridge National Lab., TN (United States). 1 Oct 1993. 23p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE94000983. 7782 (ANL–93/33) **Practical superconductor development for electrical power applications: Annual report for FY 1993.** Poeppel, R.B. (Kalamazoo, Coll., MI (United States)); Goretta, K.C. (comp.); Askew, T.R. Argonne National Lab., IL (United States). Oct 1993. 58p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE94005378. Source: OSTI; NTIS; GPO Dep.

Development of useful high-critical-temperature superconductors requires synthesis of superconducting compounds; fabrication of wires, tapes, and films from these compounds; production of composite structures that incorporate stabilizers or insulators; and design and testing of efficient components. This report describes technical progress of research and development efforts aimed at producing superconducting components in the Y-Ba-Cu, (Bi,Pb)-Sr-Ca-Cu,(Tl,Pb, Bi)-(Ba,Sr)-Ca-Cu, and Hg-Ba-Ca-Cu-O oxide systems. Topics discussed are synthesis and heat treatment of high-T_c superconductors; formation of monolithic and composite wires, tapes, and coils, characterization of structures and superconducting and mechanical properties; fabrication and properties of films; and development of properties of films; and development of prototype components. Collaborations with industry and academia are documented.

7783 (ANL/ET/CP–81211) **Processing and properties of Ag-clad Bi-2223 tapes.** Balachandran, U. (Argonne National Lab., IL (United States)); Iyer, A.N.; Haldar, P.; Motowidlo, L.R. Argonne National Lab., IL (United States). Nov 1993. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-931238–1: 6. US-Japan workshop on superconductivity, Houston, TX (United States), 6-7 Dec 1993). Order Number DE94004603. Source: OSTI; NTIS; GPO Dep.

We prepared partially reacted, polyphase, Pb-doped Bi-Sr-Ca-Cu-O (2223) powders by solid-state and wet-chemical routes. The calcined powders were characterized by thermal analysis, x-ray diffraction, and scanning electron microscopy. We then fabricated long lengths of flexible Ag-clad 2223 tapes by the powder-in-tube technique. Multifilamentary conductors have been prepared by stacking circular single-core Ag-sheathed superconductor rods into larger Ag tube and then drawing and rolling the tube to final size. The tapes were given appropriate heat treatment and the growth of the 2223 phase at each step of the heat treatment was studied. At 4.2 and 27 K, improved process conditions yielded transport critical current density (J_c) values $> 10^5$ A/cm^2 at zero field; at 77 K, J_c exceeded 4×10^4 A/cm^2. Using a two-step rolling with an intermediate heat treatment, we have fabricated conductors ≈70 m long. The J_c value of these long conductors is $\approx 2 \times 10^4$ A/cm^2 at 77 K in self field. Superconducting pancake coils were fabricated from the long-length tapes by the wind-and-react technique.

7784 (ANL/ET/CP–81213) **Recent developments in fabrication of Bi-2223 conductors and magnets.** Balachandran, U. (Argonne National Lab., IL (United States)); Iyer, A.N.; Haldar, P.; Hoehn, J.G. Jr.; Motowidlo, L.R. Argonne National Lab., IL (United States). Dec 1993. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-931238–3: 6. US-Japan workshop on superconductivity, Houston, TX (United States), 6-7 Dec 1993). Order Number DE94004628. Source: OSTI; NTIS; GPO Dep.

Significant progress has been made in the fabrication of Bi-2223 high-T_c, high-critical-current-density (J_c) superconductor tapes that are attractive for electrical power and high-field magnet applications. Long lengths (≈100 m) of Ag-clad Bi-2223 tapes with high J_c were fabricated by powder-in-tube technique and used to make compact and robust pancake coils by wind-and-react method. Three to five layers of tapes were co-wound with an insulation and heat treated to produce pancake coils. These coils were then stacked in series to make test magnets. The coils and magnets were characterized at temperatures of liquid nitrogen (77 K), pumped liquid nitrogen (64 K), liquid neon (27 K), and liquid helium (4.2 K). Recently, we assembled a magnet containing ten pancake coils (≈480 m of tape) that generated magnetic fields as high as 2.6, 1.8, 0.53, and 0.36 T at 4.2, 27, 64, and 77 K, respectively. These results show promise toward practical utilization of high-$T_c$materials. Lengths of superconductor, 30–100 m long, are now being made, and 70-m lengths have been measured to carry 23 A (corresponding to $J_c \approx 1.5 \times 10^4$ A/cm^2) at 77 K. Progress in the prototype manufacturing of long lengths of Bi-2223 conductor is discussed in this paper.

7785 (ANL/ET/CP–81504) **Current leads and magnetic bearings.** Hull, J.R. Argonne National Lab., IL (United States). [1993]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-931238–2: 6. US-Japan workshop on superconductivity, Houston, TX (United States), 6-7 Dec 1993). Order Number DE94004607. Source: OSTI; NTIS; GPO Dep.

Since the discovery of high-temperature superconductors (HTSs), Argonne National Laboratory (ANL) has been active in a broad spectrum of activities in developing these materials for applications. Work at every stage of development has involved industrial collaboration in order to accelerate commercialization. While most of the development work has been devoted to improving the properties of current-carrying wires, some effort has been devoted to applications that can utilize HTSs with properties available now or in the near future. In this paper, I discuss advances made at my laboratory in the area of current leads and magnetic bearings.

7786 (ANL/MSD/CP–80230) **Energy gap structure of layered superconductors.** Liu, S.H. (Oak Ridge National Lab., TN

(United States)); Klemm, R.A. Argonne National Lab., IL (United States); Oak Ridge National Lab., TN (United States). Nov 1993. 17p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38 ; AC05-84OR21400. (CONF-940121--1: Superconducting superlattices and multilayers and oxide superconductory physics and nanoengineering, Los Angeles, CA (United States), 23-28 Jan 1994). Order Number DE94005132. Source: OSTI; NTIS; GPO Dep.

We report the energy gap structure and density-of-states (DOS) of a model layered superconductor with one superconducting layer and one normal layer in a unit cell along the c-axis. In the physically interesting parameter range where the interlayer hopping strengths of the quasiparticles are comparable to the critical temperature, the peaks in the DOS curve do not correspond to the order parameter (OP) of the superconducting layer, but depend on the OP and the band dispersion in the c-direction in a complex manner. In contrast to a BCS superconductor, the DOS of layered systems have logarithmic singularities. Our simulated tunneling characteristics bear close resemblance to experimental results.

7787 (ANL/MSD/CP--81484) **The effect of processing on the microstructure of Ag-sheathed Bi-2223 wires.** Miller, D.J. (Argonne National Lab., IL (United States)); Hu, J.G.; Kostic, P.; Balachandran, U.; Haldar, P. Argonne National Lab., IL (United States). Nov 1993. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-931009--15: Fall meeting of the Minerals, Metals and Materials Society: physical metallurgy and materials, Pittsburgh, PA (United States), 17-21 Oct 1993). Order Number DE94004627. Source: OSTI; NTIS; GPO Dep.

Studies using TEM and SEM, focused on effect of final heat treatment conditions on microstructure of $(Bi,Pb)_2Sr_2Ca_2Cu_3O_x$(Bi-2223)wires and corresponding variations in critical currents (I_c). It is found that variations in I_c for segments cut from various points along length of a wire can be correlated with variations in volume fraction and nature of second phases. Similar variations are observed between wires processed under different final annealing conditions. A common feature found in all of the wire segments with lower I_c values was presence of the $Pb_3Sr_2Ca_2CuO_x$ phase (Pb-3221). Microchemical analysis suggests that formation of this phase leads to variations in composition of Bi-2223 grains. As a result, the wires which exhibit the Pb-3221 phase consist of an assemblage of grains with a range of transition temperatures based on composition. Thus, in these segments, the current carrying capacity of individual grains at 77K varies from very good to poor, and a significant reduction in the overall I_c of the segment is observed.

7788 (BNL--49706) **Ac losses for the self field of an ac transport current with a dc transport current offset in high $T_c$superconducting magnet coils for MagLev application.** Koosh, V.F. Brookhaven National Lab., Upton, NY (United States). Oct 1993. 17p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. Order Number DE94005187. Source: OSTI; NTIS; GPO Dep.

Although much research has been conducted concerning the losses of high-$T_c$superconductors, very little has concentrated on the self-field losses in an actual magnet arrangement. The coils studied in this work were designed for use as actual magnets in an industrial application. Self field loss measurements were made upon tape-wound 2223 superconducting helix coils. The self-field losses were produced by an AC transport current with a DC transport current offset. Losses were taken for single, double and triple tape windings, giving essentially monofilament, dual, and three filament cases. The losses measured here were varied over a range of AC current values for several different DC values, and over a range of frequencies. The currents were all AC sinusoids with a DC offset. All measurements were made at T = 77K.

7789 (DOE/ER/14017--5) **Flux flow, pinning, and resistive behavior in superconducting networks: Annual progress report, May 1, 1993--April 30, 1994.** Teitel, S. Rochester Univ., NY (United States). Dept. of Physics and Astronomy. Oct 1993. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-89ER14017. Order Number DE94003400. Source: OSTI; NTIS; INIS; GPO Dep.

We have studied the behavior of fluctuation effects in superconducting systems using numerical simulations of XY and Coulomb gas models. The fluctuation of vortex lines in high temperature superconductors, in the presence of an external magnetic field, has been studied using a three dimensional XY model. We have continued earlier work and verified the existence of two distinct phase transitions in this model. As the vortex line lattice is heated, it melts first into a line liquid where superconductivity is destroyed for currents perpendicular to the applied magnetic field, but persists for currents parallel to the field. As heating continues, the thermal excitation of closed vortex line loops links all the lines together, leading to completely normal metal properties in all directions. Upon cooling of the vortex line liquid, we find that as the system width increases, one can get trapped into an entangled non-equilibrium state in which vortex line cuttings are frozen out on measurable nine scales. We have also continued simulations of the two dimensional Coulomb gas, as a model for vortex fluctuations in two dimensional arrays of Josephson junctions, and thin film superconductors. Our preliminary results support the accepted view of a Kosterlitz-Thouless melting of the vortex lattice, in the limit of a uniform continous film.

7790 (IS-T--1642) **Synthesis, rheology and forming of Y-Ba-Cu-O ceramics.** Green, T.M. Ames Lab., IA (United States). Jul 1993. 145p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-82. Order Number DE94005558. Source: OSTI; NTIS; INIS; GPO Dep.

A chemical synthesis route is discussed which results in a low-temperature precursor to Y-Ba-Cu-O ceramics; it is based on use of molten $Ba(OH)_2{\cdot}8H_2O$ flux. Two different chemical systems have been examined; the first one, based on nitrate salts, has been demonstrated to be a viable precursor material for tape casting and extrusion; the second, made from acetate salts, has been used for powder synthesis and extrusion. Rheology of pastes shows that their flow may be fit to either Bingham Plastic or Hershel- Bulkley models. Yield stress is controlled in both pastes by volume fraction solids. Viscosity also follows solids loading in the paste. Shear thinning is controlled by colloidal nature of precursor. The paste has colloidal microstructure. Comparison of concentric cylinder rheometry and piston extrusion rheometry shows order of magnitude differences in yield stress, resulting from the test method and paste dilation.

7791 **Free-standing superconductive articles.** Wu, X.D.; Muenchausen, R.E. To Dept. of Energy. 1991. U.S. patent application 7-813,727. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE94005157. Source: OSTI; NTIS; GPO Dep.

A substrate-free, free-standing epitaxially oriented superconductive film including a layer of a template material and a layer of a ceramic superconducting material is provided together with a method of making such a substrate-free ceramic superconductive film by coating an etchable material with a template layer, coating the template layer with a layer of a ceramic superconductive material, coating the layer of ceramic superconductive material with a protective material, removing the etchable material by an appropriate means so that the etchable material is separated from a composite structure including the template layer, the ceramic superconductive material layer and the protective material layer, removing the protective material layer from the composite structure whereby a substrate-free, free-standing ceramic superconductive film remains.

7792 **Superconductive articles.** Wu, X.D.; Muenchausen, R.E. To Dept. of Energy. 1991. U.S. patent application 7-814,355. 17p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE94005152. Source: OSTI; NTIS; GPO Dep.

An article of manufacture including a substrate, a patterned interlayer of magnesium oxide, barium-titanium oxide or barium-zirconium oxide, the patterned interlayer material overcoated with a secondary interlayer material of yttria-stabilized zirconia or magnesium-aluminum oxide, upon the surface of the substrate whereby an intermediate article with an exposed surface of both the overcoated patterned interlayer and the substrate is formed, a

coating of a buffer layer selected from the group consisting of oxides of Ce, Y, Cm, Dy, Er, Eu, Fe, Gd, Ho, In, La, Mn, Lu, Nd, Pr, Pu, Sm, Tb, Tl, Tm, Y, and Yb over the entire exposed surface of the intermediate article, and, a ceramic superconductive material layer as an overcoat upon the buffer layer whereby the ceramic superconductive material situated directly above the substrate has a crystal structure substantially different than the ceramic superconductive material situated above the overcoated patterned interlayer.

Multiple mirror plasma confinement concept is considered. A theory of plasma diffusion through a corrugated magnetic field is developed. It is shown, that multiple mirror devices hold considerable promise for confining fusion plasmas. 75 refs.; 8 figs.; 4 tabs.

7794 (BUDKERINP–92-58) **Self-similar regimes of subsonic Langmuir wave collapse.** Khudik, V.N.; Malkin, V.M. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1992. 9p. (IYaF–92-58.). Order Number DE94611466. Source: OSTI; NTIS (US Sales Only); INIS.

The first examples of regular and singular self-similar solutions of the 3-d nonlinear Schroedinger equation for potential vector field are found explicitly. Regular solutions relate to the process of the 'singularities ' formation. Singular solutions relate to an early evolution of the 'singularities'. Together, the solutions describe behaviour of Langmuir wave field in the spatiotemporal vicinities of its'singularities' and provide an effective mechanism of energy dissipation from the Langmuir condensate. 5 refs.; 1 fig.

7795 (BUDKERINP–92-60) **The kinetics of inhomogeneous plasma.** Erofeeev, V.I. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1992. 20p. (IYaF–92-60.). Order Number DE94611459. Source: OSTI; NTIS (US Sales Only); INIS.

A new concept of plasma kinetic description is developed. The instrumentation was elaborated for describing of plasma cross diffusion via the particle interaction with drift waves. The instrumentation includes consistent equations of particle distribution evolution and of drift wave pumping. The effect of plasma nonstationary and particle induced scattering are taken into account. The new concept do not involve the averaging over the initial data ensemble. In treating of turbulent plasma it gives possibilities to avoid the using of the wellknown Random Phase Approximation and of any renormalizations. 10 refs.

7796 (CONF-9311140–1) **Fast wave current drive technology development at ORNL.** Baity, F.W. (Oak Ridge National Lab., TN (United States)); Batchelor, D.B.; Goulding, R.H.; Hoffman, D.J.; Jaeger, E.F.; Ryan, P.M.; deGrassie, J.S.; Petty, C.C.; Pinsker, R.I.; Prater, R. Oak Ridge National Lab., TN (United States). [1993]. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From IAEA meeting on radio-frequency launchers for plasma heating and current drive; Naka (Japan); 10-12 Nov 1993. Order Number DE94004243. Source: OSTI; NTIS; INIS; GPO Dep.

The technology required for fast wave current drive (FWCD) systems is discussed. Experiments are underway on DIII-D, JET, and elsewhere. Antennas for FWCD draw heavily upon the experience gained in the design of ICRF heating systems with the additional requirement of launching a directional wave spectrum. Through collaborations with DIII-D, JET, and Tore Supra rapid progress is being made in the demonstration of the physics and technology of FWCD needed for TPX and ITER.

7797 (CONF-9311147–1) **Helium transport and exhaust studies of H-mode discharges in the DIII-D tokamak.** Hillis, D.L. (Oak Ridge National Lab., TN (United States)); Wade, M.R.; Hogan, J.T. Oak Ridge National Lab., TN (United States); General Atomics, San Diego, CA (United States). [1993]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400 ; AC03-89ER51114. From IAEA meeting on H-mode physics; Naka (Japan); 15-17 Nov 1993. Order Number DE94004744. Source: OSTI; NTIS; INIS; GPO Dep.

A collaborative program has been initiated to measure helium (He) transport and exhaust on DIII-D in L-mode, ELM-free H-mode, and ELMing H-mode. These diverted plasmas operating in enhanced confinement regimes should provide valuable information for the International Thermonuclear Experimental Reactor (ITER). To simulate the presence of He ash in DIII-D, a 50 ms He puff is injected into a DIII-D plasma, resulting in a He concentration of ~ 15%. The time dependence of the He density profiles in the plasma core is measured with charge-exchange recombination spectroscopy and the He spatial distribution on the diverter floor is studied with an impurity monitor array. The dependence of core transport diffusivities as a function of ELM frequency have been studied and the first demonstration made of He exhaust from an H-mode plasma in a diverted tokamak. The exhaust rate of He from these ELMing H-mode plasmas appears to be within the acceptable range for a fusion reactor, like ITER, based on a measured value of $\tau^*_{He}/\tau E \approx 14$.

7798 (DOE/ER/53198–227) **Measurement of magnetic fluctuation induced energy transport.** Fiksel, G.; Prager, S.C.; Shen, W.; Stoneking, M. Wisconsin Univ., Madison, WI (United States). Dept. of Physics. Nov 1993. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-85ER53198. Order Number DE94003846. Source: OSTI; NTIS; INIS; GPO Dep.

The local electron energy flux produced by magnetic fluctuations has been measured directly in the MST reversed field pinch (over the radial range $r/a > 0.75$). The flux, produced by electrons traveling parallel to a fluctuating magnetic field, is obtained from correlation between the fluctuations in the parallel heat flux and the radial magnetic field. The fluctuation induced flux is large (100 kW/cm^2) in the "core" ($r/a < 0.85$) and small (< 10–30 kW/cm^2) in the edge.

7799 (DOE/ER/53198–229) **Broadband EUV survey spectrometer for short-timescale experiments.** Chapman, B.E.; Hartog, D.J. Den; Fonck, R.J. Wisconsin Univ., Madison, WI (United States). Plasma Physics Research. Nov 1993. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-85ER53198. Order Number DE94005459. Source: OSTI; NTIS; INIS; GPO Dep.

A fast and inexpensive spectrometer system has been developed to record EUV impurity spectra in a magnetic fusion research device. To simplify the vacuum system, light is passed out of the spectrometer's vacuum to the detector using a sodium-salicylate-coated fiber optic coupler. This coupler is positioned such that the focal field is nearly flat over its aperture. The system's detector is a microchannel-plate-intensified, linear, self-scanning photodiode array. The 1024-pixel array covers a bandwidth of over 80 nm and is read out once every millisecond. The readout, which is four times faster than the manufacturer's maximum rating, is fully synchronized to the experiment using a locally-designed control circuit.

7800 (DOE/ER/53198–230) **Photon counting spectroscopy as done with a Thomson scattering diagnostic.** Den Hartog, D.J.; Ruppert, D.E. Wisconsin Univ., Madison, WI (United States). Plasma Physics Research. Nov 1993. 48p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-85ER53198. Order Number DE94005543. Source: OSTI; NTIS; INIS; GPO Dep.

The measurement and reduction of photon counting spectral data is demonstrated within the context of a Thomson scattering diagnostic. This diagnostic contains a microchannel plate (MCP) photomultiplier tube (PMT) as the photon sensing device. The MCP PMT is not an ideal photon sensor, the loss of photoelectrons at the MCP input and the broad charge pulse distribution at the output add to the uncertainty in recorded data. Computer simulations are used to demonstrate an approach to quantification of this added uncertainty and to develop an understanding of its source; the methodology may be applicable to the development of an

understanding of photon detectors other than an MCP PMT. Emphasis is placed on the Poisson statistical character of the data, because the assumption that a Gaussian probability distribution is a reasonable statistical description of photon counting data is often questionable. When the count rate is low, the product the possible number of photon counts and the probability of measurement of a single photon is usually not sufficiently large to justify Gaussian statistics. Rather, because probabilities of measurement are so low, the Poisson probability distribution best quantifies the inherent statistical fluctuations in such counting measurements. The method of maximum likelihood is applied to derive the Poisson statistics equivalent of $_{\chi}{}^{2}$. A Poisson statistics based data fitting code is implemented using the Newton-Raphson method of multi-dimensional root finding; we also demonstrate an algorithm to estimate the uncertainties in derived quantities.

7801 (DOE/ER/53198–231) **Fluctuation and transport reduction in a reversed field pinch by inductive poloidal current drive.** Sarff, J.S.; Hokin, S.A.; Ji, H.; Prager, S.C.; Sovinec, C.R. Wisconsin Univ., Madison, WI (United States). Plasma Physics Research. Dec 1993. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-85ER53198. Order Number DE94005542. Source: OSTI; NTIS; INIS; GPO Dep.

An auxilliay poloidal inductive electric field applied to a reversed field pinch plasma reduces the current density gradient, slows the growth of m=1 tearing fluctations, suppresses their associated sawteeth, and doubles the energy confinement time. Small sawteeth occur in the improved state but with m=0 precursors. By requiring a change of toroidal flux embedding the plasma, inductive poloidal current profile drive is transient, but the improvement encourages the program of RFP transport suppression using current profile control.

7802 (DOE/ER/53211–12) **[Advanced development of particle beam probe diagnostic system]: Annual progress report, [15 December 1992–15 October 1993].** Crowley, T.P.; Schoch, P.M.; Connor, K.A. Rensselaer Polytechnic Inst., Troy, NY (United States). [1993]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-85ER53211. Order Number DE94002316. Source: OSTI; NTIS; INIS; GPO Dep.

This progress report under DOE Grant DE-FG02-85ER3211 covers the period 15 December 1992 through 15 October 1993. The major accomplishments of this period are summarized below: The basic TEXT heavy ion beam probe including the primary beam line, the upper secondary beam line with the old 500 keV analyzer, and the lower secondary beam line with the new 2 MeV analyzer is operational and system shake-down is now beginning. Several subsystems of the complete system design are still under development, including secondary beam line sweeps, primary beam detectors, the digital control and data acquisition system. The lower analyzer entrance aperture and detector plates also have very limited capabilities to make it possible to more rapidly obtain satisfactory initial alignment and calibration conditions. We have performed a variety of high voltage tests that establish the basic efficacy of the 2 MeV analyzer design. We have upgraded the ion optics and added vacuum chambers in our vertical test stand facility to allow us to test the 2 MeV analyzers. We have also constructed a facility for testing ion source characteristics. We analyzed data on primary beam modulation taken during the last run period and confirmed the accuracy of our simulation code. Analysis of magnetic field measurements continued.

7803 (DOE/ER/53212–T2) **Theoretical reversed field pinch and tokamak studies: Progress report, November 1, 1992–June 10, 1993.** Wisconsin Univ., Madison, WI (United States). [1993]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-85ER53212. Order Number DE94005409. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses the following topics: fluctuation suppression by electrostatic current injection; pulsed poloidal current drive; effect of current drive on fluctuations; rf current drive in the RFP; development of a hyper-dissipation algorithms; and interacting magnetic islands.

7804 (DOE/ER/53222–108) **Passive stabilization of MHD instabilities at high βn in the HBT-EP Tokamak.** Gates, D.A. Columbia Univ., New York, NY (United States). Plasma Physics Lab. 1993. 133p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-86ER53222. Order Number DE94003317. Source: OSTI; NTIS; INIS; GPO Dep.

The HBT-EP Tokamak has been designed, built, and is now fully operational in the Columbia University Plasma Physics Laboratory. One of the primary purposes of this facility is to study the effects of a conducting wall on the MHD modes that lead up to plasma disruptions. Of particular interest are the types of instabilities that are driven by the kinetic pressure of the plasma, because these instabilities are believed to be responsible for the present limit to plasma β with $\beta \propto \langle p \rangle / B^2$, where the $\langle p \rangle$ is the volume averaged pressure and B is the magnetic field. To this end, a movable conducting wall has been installed inside the HBT-EP vacuum chamber. The primary result of this thesis are the initial results from experiments that study the effect of this wall on plasma instabilities. The experiment shows that the conducting wall significantly reduces the growth rate of instabilities that precede a plasma disruption that occurs when the value of β is near the Troyon limit. The location of the wall required for significant stabilization is b/a $\sim$1.2 where a is the minor radius of the plasma and b is the minor radial location of the wall. Moving the wall closer than b/a = 1.2 slightly degrades the stabilizing effect, which is consistent with recent theories.

7805 (DOE/ER/53237–T1) **Determination of atomic data pertinent to the Fusion Energy Program: Progress report for FY 92.** National Inst. of Standards and Technology, Gaithersburg, MD (United States). [1992]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AI05-86ER53237. Order Number DE94004400. Source: OSTI; NTIS; INIS; GPO Dep.

In the pursuit of the general goal to provide essential atomic radiation and collision data for the fusion energy program, the following progress was achieved at NIST during FY 92: (1) identification of spectral lines of impurity in ions (from Er to Bi); (2) spectroscopic data compilations of critically evaluated wavelengths and energy levels of atoms and ions; (3) electron-ion collision experiments; (4) electron impact excitation theory; and (5) electron-impact ionization theory.

7806 (DOE/ER/53281–T1) **The investigation of electron-ion radiative and dielectronic recombination in high-temperature plasmas: Progress report for 1989–1990.** Jacobs, V.L. Naval Research Lab., Washington, DC (United States). Condensed Matter and Radiation Sciences Div. [1990]. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AI05-89ER53281. Order Number DE94004907. Source: OSTI; NTIS; INIS; GPO Dep.

(1) The unified description of radiative and dielectronic recombination has been extended to treat processes involving more than a single state of the initial ion, the autoionizing resonance, and the recombined ion. The major theoretical effort is now centered on the generalization of this description to self-consistently incorporate the effects of charged-particle collisions and plasma electric fields. (2) The K_{α} model for the dielectronic satellite spectra of highly-charged Fe ions has been incorporated into the multi-ion-species transport code developed at the Princeton Plasma Physics Laboratory. The immediate objective is to produce a realistic simulation of the observed Fe K_{α} spectra from PLT and TFTR. (3) A detailed investigation is in progress involving calculations of the dielectronic recombination satellite spectra in the presence of a distribution of plasma electric microfields. The calculations have been carried out for the lowest-lying n=2 satellites, which are affected by the electric fields only in high-density laser-produced plasmas. (4) The investigation has been completed on the effects of indirect processes involving autoionization resonances for electron-density sensitive line-intensity ratios. The resonance contributions have been found to be comparable with the direct electron-impact excitation rates for magnetic-quadrupole transitions in high-charged ions. Line intensity ratios have been identified which are sensitive to density in the density region of characteristic tokamak plasmas.

7807 (DOE/ER/53281–T2) **The investigation of electron-ion radiative and dielectronic recombination in high-temperature plasmas: Progress report for 1990–1991.** Jacobs, V.L. Naval Research Lab., Washington, DC (United States). Condensed Matter and Radiation Sciences Div. [1991]. 5p. Sponsored by USDOE,

Washington, DC (United States). DOE Contract AI05-89ER53281. Order Number DE94005149. Source: OSTI; NTIS; INIS; GPO Dep.

(1) The unified description of radiative and dielectronic recombination, which the authors have developed to provide corrections to the conventional independent-processes approximation, has been generalized to self-consistently incorporate the effects of charged-particle collisions and plasma electric fields. (2) The K_α model for the dielectronic satellite spectra of highly-charged Fe ions, which the authors have developed based on the conventional theory of dielectronic satellite line intensities, has been incorporated into the multi-ion-species transport code MIST. Excellent agreement has been obtained between the simulated spectra and the observed Fe K_α spectra from PLT and TFTR. (3) A detailed investigation has been completed on the dielectronic recombination satellite spectra in the presence of a distribution of plasma electric microfields. The calculations have been carried out for the lowest-lying n=2 satellites, which are affected by the electric fields only in high-density laser-produced plasma. For application to the lower-density conditions in tokamak plasmas, in which the electron density is about ten orders of magnitude smaller, a number of alternatives are under consideration for evaluating the recombination rates associated with the Rydberg autoionizing sates corresponding to large values of n. (3) A manuscript entitled "Observation of Density-Enhanced Dielectronic Satellite Spectra Produced During Subpicosecond Laser-Matter Interactions" has been submitted for publication in the Physical Review A. This work provides a convincing experimental verification of the theoretical predictions on the density sensitivity of diagnostically-important dielectronic satellite spectra in dense plasmas.

7808 (DOE/ER/53281–T3) **The investigation of electron-ion radiative and dielectronic recombination in high-temperature plasmas: Progress report for 1992–1993.** Jacobs, V.L. Naval Research Lab., Washington, DC (United States). Condensed Matter and Radiation Sciences Div. [1993]. 42p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AI05-89ER53281. Order Number DE94005150. Source: OSTI; NTIS; INIS; GPO Dep.

This paper describes progress covered in the following six areas: (1) unified description of radiative and dielectronic recombination; (2) calculations of specific dielectronic satellite transitions; (3) Modeling of K_α dielectronic satellite spectra; (4) effects of electron collisions and electric fields; (5) density-sensitive dielectronic satellite lines; and (6) polarization of atomic radiative emission in crossed electric and magnetic fields. Also discussed are proposed investigations and coordination with current tokamak observations.

7809 (DOE/ER/53291–225) **The dynamics of interacting nonlinearities governing long wavelength driftwave turbulence.** Newman, D.E. Wisconsin Univ., Madison, WI (United States). Plasma Physics Research. Sep 1993. 107p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-89ER53291. Order Number DE94001785. Source: OSTI; NTIS; INIS; GPO Dep.

Because of the ubiquitous nature of turbulence and the vast array of different systems which have turbulent solutions, the study of turbulence is an area of active research. Much present day understanding of turbulence is rooted in the well established properties of homogeneous Navier-Stokes turbulence, which, due to its relative simplicity, allows for approximate analytic solutions. This work examines a group of turbulent systems with marked differences from Navier-Stokes turbulence, and attempts to quantify some of their properties. This group of systems represents a variety of drift wave fluctuations believed to be of fundamental importance in laboratory fusion devices. From extensive simulation of simple local fluid models of long wavelength drift wave turbulence in tokamaks, a reasonably complete picture of the basic properties of spectral transfer and saturation has emerged. These studies indicate that many conventional notions concerning directions of cascades, locality and isotropy of transfer, frequencies of fluctuations, and stationarity of saturation are not valid for moderate to long wavelengths. In particular, spectral energy transfer at long wavelengths is dominated by the E x B nonlinearity, which carries energy to short scale in a manner that is highly nonlocal and anisotropic. In marked contrast to the canonical self-similar cascade dynamics of Kolmogorov, energy is efficiently passed between modes separated by the entire spectrum range in a correlation time. At short wavelengths, transfer is dominated by the polarization drift nonlinearity. While the standard dual cascade applies in this subrange, it is found that finite spectrum size can produce cascades that are reverse directed and are nonconservative in enstrophy and energy similarity ranges. In regions where both nonlinearities are important, cross-coupling between the nolinearities gives rise to large no frequency shifts as well as changes in the spectral dynamics.

7810 (DOE/ER/54111–3) **Heavy Neutral Beam Probe for edge plasma analysis in Tokamaks: Annual progress report, December 1, 1992–November 30, 1993.** Castracane, J.; Saravia, E.; Beckstead, J.; Aceto, S. InterScience, Inc., Troy, NY (United States). 3 Sep 1993. 19p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-91ER54111. Order Number DE94003391. Source: OSTI; NTIS; INIS; GPO Dep.

The contents of this report present the progress achieved to date on the Heavy Neutral Beam Probe project. This effort is an international collaboration in magnetic confinement fusion energy research sponsored by the US Department of Energy, Office of Energy Research (Confinement Systems Division) and the Centre Canadien de Fusion Magnetique (CCFM). The overall objective of the effort is to develop and apply a neutral particle beam to the study of edge plasma dynamics in discharges on the Tokamak de Varennes (TdeV) facility in Montreal, Canada. To achieve this goal, a research and development project was established to produce the necessary hardware to make such measurements and meet the scheduling requirements of the program. At present the project is in the middle of its second budget period with the instrumentation on-site at TdeV. The first half of this budget period was used to complete total system tests at InterScience, Inc., dismantle and ship the hardware to TdeV, re-assemble and install the HNBP on the tokamak. Integration of the diagnostic into the TdeV facility has progressed to the point of first beam production and measurement on the plasma. At this time, the HNBP system is undergoing final de-bugging prior to re-start of machine operation in early Fall of this year.

7811 (DOE/ER/54139–2) **TFTR Experimental Data Analysis Collaboration: Annual progress report, November 15, 1992–November 14, 1993.** Callen, J.D. Wisconsin Univ., Madison, WI (United States). [1993]. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-92ER54139. Order Number DE94004166. Source: OSTI; NTIS; INIS; GPO Dep.

The research performed under the second year of this three-year grant has concentrated on a few key TFTR experimental data analysis issues: MHD mode identification and effects on supershots; identification of new MHD modes; MHD mode theory-experiment comparisons; local electron heat transport inferred from impurity-induced cool pulses; and some other topics. Progress in these areas and activities undertaken in conjunction with this grant are summarized briefly in this report.

7812 (DOE/ER/54196–1) **TFTR Ion Cyclotron Range of Frequencies (ICRF) experimental data analysis collaboration: Annual progress report, December 1, 1992 to November 30, 1993.** Scharer, J.E. Wisconsin Univ., Madison, WI (United States). Dept. of Electrical and Computer Engineering. Dec 1993. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-93ER54196. Order Number DE94004699. Source: OSTI; NTIS; INIS; GPO Dep.

The research performed under this grant during the past year has been concentrated on two TFTR tokamak ICRF (Ion Cyclotron Range of Frequencies) coupling, and heating issues. This includes a "3-D" coupling analysis of the TFTR ICRF cavity-backed coil antennas to plasma edge profiles including the Faraday shield blade angle and fast wave coupling for heating and current drive; TFTR ICRF full-wave field solutions, heating analyses for the D-T supershot; and the effects of fusion alpha particle and ion tail populations on the ICRF absorption. Research progress, publications, and conference presentations are summarized in this report.

7813 (DOE/ER/54197–1) **Maryland controlled fusion research program: Progress report, November 1, 1992–October 31, 1993.** Antonsen, T.M. Jr.; Drake, J.F.; Finn, J.M.; Guzdar, P.;

Hassam, A.; Liu, C.S.; Ott, E. Maryland Univ., College Park, MD (United States). May 1993. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-93ER54197. Order Number DE94003533. Source: OSTI; NTIS; INIS; GPO Dep.

In recent years, members of the Maryland Plasma Theory Group have made significant contributions to the national fusion theory program, and, in many cases, these theoretical developments helped to interpret experimental results and to design new experimental programs. In this paper, we summarize the technical progress in four major areas of tokamak research: (a) L/H transition and edge turbulence and transport; (b) active control of micro-turbulence and transport; (c) major disruptions; and (d) the sawtooth crash.

7814 (DOE/ET/53088–623-Rev.) **Kinetic resonance damping rate of the toroidal ion temperature gradient mode.** Kim, J.Y.; Kishimoto, Y.; Horton, W.; Tajima, T. Texas Univ., Austin, TX (United States). Inst. for Fusion Studies. Nov 1993. 36p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-80ET53088. (IFSR–623-Rev.). Order Number DE94003511. Source: OSTI; NTIS; INIS; GPO Dep.

The linear damping rates of the toroidal ion temperature gradient (η_i) mode due to the toroidal resonance are calculated in the local kinetic limit. The well-known Landau contour method is generalized to treat the analytic continuation problem of the guiding center dispersion function in the toroidal resonance system where the resonance occurs from both the magnetic ∇B-curvature drift and the parallel ion transit drift. A detailed numerical analysis is presented for the dependence of the damping rate of the toroidal η_i mode on various parameters such as ϵ_n, κ_y, and the rapped electron fraction. In addition, a consideration is presented on the decay problem of the ballistic response by phase mixing in the toroidal system, which is directly related to the kinetic damping problem of the wave normal modes by the toroidal resonance.

7815 (DOE/ET/53088–627) **Toroidal plasma beta-FLR limit in a toroidally linked mirror system.** Wong, H.V. (Texas Univ., Austin, TX (United States). Inst. for Fusion Studies); Berk, H.L.; Ilgisonis, V.I.; Pastukhov, V.P. Texas Univ., Austin, TX (United States). Inst. for Fusion Studies. Oct 1993. 27p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-80ET53088. (IFSR–627). Order Number DE94003119. Source: OSTI; NTIS; INIS; GPO Dep.

The ballooning stability limit in one toroidal section of the recently proposed toroidally linked neutron source is investigated taking into account finite Larmor radius effects. The ideal ballooning instability limits the toroidal plasma beta to less than 1% for a reasonable set of design parameters. The inclusion of stabilizing kinetic effects predicts an improvement in the toroidal plasma beta limit to ~2%.

7816 (DOE/ET/53088–629) **δf Algorithm.** Denton, R.E. (Dartmouth Coll., Hanover, NH (United States). Dept. of Physics and Astronomy); Kotschenreuther, M. Texas Univ., Austin, TX (United States). Inst. for Fusion Studies. Nov 1993. 34p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-80ET53088. (IFSR–629). Order Number DE94003120. Source: OSTI; NTIS; INIS; GPO Dep.

The δf Algorithm is a low noise particle code algorithm. The perturbation of the distribution function (δf) away from a large equilibrium is evolved rather than the total distribution function. "Particles" in the code are actually Lagrangian markers at which the value of the distribution functalon is known. The magnitude of the numerical noise is characteristic of the size of the perturbation rather than the equilibrium, and scales roughly as the inverse of the number of particles. In this paper. the algorithm is described. and conserved energies are derived for linear and nonlinear sets of equations. Two different forms of the energy principle test separately adequate resolution in time and space and adequacy of the number of simulation particles. A semi-implicit time step method is described which allows violation of the Courant condition. Low noise capabilities of a linear code using the algorithm are demonstrated.

7817 (DOE/ET/53088–632) **Reduced Braginskii equations.** Yagi, M. (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment); Horton, W. Texas Univ., Austin, TX (United States). Inst. for Fusion Studies. Nov 1993. 12p. Sponsored by USDOE, Washington, DC (United States);Joint Inst. for Fusion Theory, Austin, TX (United States). DOE Contract FG05-80ET53088. (IFSR–632). Order Number DE94003510. Source: OSTI; NTIS; INIS; GPO Dep.

A set of reduced Braginskii equations is derived without assuming flute ordering and the Boussinesq approximation. These model equations conserve the physical energy. It is crucial at finite β that we solve the perpendicular component of Ohm's law to conserve the physical energy while ensuring the relation $\nabla \cdot j = 0$.

7818 (DOE/ET/53088–T4) **Shear flow generation from the interaction of neoclassical and drift wave transport processes.** Su, X.N.; Yushmanov, P.N.; Dong, J.Q.; Horton, W. Texas Univ., Austin, TX (United States). Inst. for Fusion Studies. Oct 1993. 49p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-80ET53088. Order Number DE94003135. Source: OSTI; NTIS; INIS; GPO Dep.

Self-consistent shear flow generation from the interaction of neoclassical and drift wave turbulence effects is investigated. The neoclassical poloidal flow damping is shown to compete with the flow generation driven by the divergence of the Reynolds stress. When there is no external driving force except for the free energy released from toroidal shear flow, the turbulent fluctuations occur as a transient pulse which takes the system along an equilibrium path to a relaxed state. External torques, such as parallel neutral beam injection, are needed to maintain significant fluctuation levels. For a system driven by a fixed ion temperature gradient, although linearly the poloidal shear flow generated substantially reduces the growth rate, the simulation results show that a sequence of nonlinear pulses occurs that eventually build the fluctuations up to a level that is not significantly affected by the poloidal flow. In this new, highly nonlinear state the transport is intermittent occurring through a sequence of pulses of duration 100 L_n/c_s for typical parameters.

7819 (DOE/FTR–93017803) **Travel to Japan for workshop on RF Heating and Current Drive in Confinement Systems Tokamaks: Foreign trip report, November 16–22, 1991.** Bonoli, P.T. Massachusetts Inst. of Tech., Cambridge, MA (United States). [1991]. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-78ET51013. Order Number DE93017803. Source: OSTI; NTIS (US Sales Only); GPO Dep.

This report summarizes important results and conclusions of the US-Japan Workshop on RF Heating and Current Drive in Confinement Systems Tokamaks. Three general categories of papers were given and are reported on: (a) RF physics, technology, and applications; (b) New concepts including helicity injection and transport; (c) Scrape off layer and divertor conditions in the presence of RF heating and current drive.

7820 (DOE/FTR–93040088) **Travel to Caderache, France for visit with the Lower Hybrid Current Drive Modeling Group: Foreign trip report, June 19–28, 1993.** Jones, S. Massachusetts Inst. of Tech., Cambridge, MA (United States). Plasma Fusion Center. 1 Sep 1993. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-78ET51013. Order Number DE93040088. Source: OSTI; NTIS (US Sales Only); GPO Dep.

From June 21, 1993 to June 25, 1993, Stephen Jones visited Tore Supra at Caderache, France, for a collaborative visit with the Lower Hybrid Current Drive Modeling group. Stephen Jones is a post-doctoral research fellow with MIT who has been a resident visitor at PPPL for the past 18 months. During this time he has worked on PBX-M with the 2-D hard x-ray imaging system conducting fast electron transport studies. The purpose of this trip was to extend our existent calculation for a fast electron diffusion coefficient by applying a different theoretical model to our x-ray data. Prior to this trip, the theoretical pardon of this calculation was based on the analytic model of Rax and Moreau, yielding a best-fit upper bound for an effective diffusion constant of $D^* = 1.2\ m^2/sec$. Many sensitivity studies were conducted with this model, testing the accuracy of the result. Nevertheless, further testing was desired by applying a completely different theoretical model to the same data. A fully 3-D Fokker-Planck code at Tore-Supra provides an alternative model, and the purpose of a collaborative visit was to couple their code with our data.

7821 (DOE/FTR–94002467) **Travel to Russia for research on vacuum ultraviolet spectra of plasma generators for Tokamak disruption simulations: Foreign trip report, September 12–October 15, 1993.** Rockett, P.D. Sandia National Labs., Albuquerque, NM (United States). 27 Oct 1993. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. Order Number DE94002467. Source: OSTI; NTIS (US Sales Only); GPO Dep.

Two identical transmission grating spectrometers were installed on disruption simulation chambers at both plasma research laboratories. Joseph T. Bradley III, UNM and John A. Hunter, SNL conducted the experiments at St. Petersburg and at Troitsk, respectively. Time integrated spectra were recorded on graphite and copper samples at the Vika laboratory while time integrated and time resolved spectra were recorded at 2MK-200 on graphite, tungsten and boron nitride samples. I visited each facility for a week to review the experimental configuration, to evaluate the validity of the data, and to direct the final weeks of data collection. At the conclusion of this trip I attended the 6th International Fusion Reactor Materials Conference in Stresa, Italy where I presented a paper on disruption simulations.

7822 (DOE/OR/00033–T565) **Experimental and numerical investigation of shock wave propagation through complex geometry, gas continuous, two-phase media.** Liu, J. Chien-Chih (California Univ., Berkeley, CA (United States)). Oak Ridge Associated Universities, Inc., TN (United States); California Univ., Berkeley, CA (United States). 1993. 294p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-76OR00033. Order Number DE94001408. Source: OSTI; NTIS; INIS; GPO Dep.

The work presented here investigates the phenomenon of shock wave propagation in gas continuous, two-phase media. The motivation for this work stems from the need to understand blast venting consequences in the HYLIFE inertial confinement fusion (ICF) reactor. The HYLIFE concept utilizes lasers or heavy ion beams to rapidly heat and compress D-T targets injected into the center of a reactor chamber. A segmented blanket of failing molten lithium or Li_2BeF_4 (Flibe) jets encircles the reactors central cavity, shielding the reactor structure from radiation damage, absorbing the fusion energy, and breeding more tritium fuel.

7823 (GA-A–21286) **Review of tokamak experiments on direct electron heating and current drive with fast waves.** Pinsker, R.I. General Atomics, San Diego, CA (United States). Dec 1993. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-89ER51114. (CONF-9304112–24: 10. topical conference on radio frequency power in plasmas, Boston, MA (United States), 1-3 Apr 1993). Order Number DE94004185. Source: OSTI; NTIS; INIS; GPO Dep.

Results from tokamak experiments on direct electron interaction with the compressional Alfven wave ('fast wave') are reviewed. Experiments aimed at electron heating as well as those in which fast wave electron current drive was investigated are discussed. A distinction is drawn between experiments employing the lower hybrid range of frequencies, where both the lower hybrid wave ('slow wave') and the fast wave can propagate in much of the plasma, and those experiments using the fast wave in the range of moderate to high ion cyclotron harmonics, where only the fast wave can penetrate to the plasma core. Most of the early tokamak experiments were in the lower hybrid frequency regime, and the observed electron interaction appeared to be very similar to that obtained with the slow wave at the same frequency. In particular, electron interaction with the fast wave was observed only below a density limit nearly the same as the well known slow wave density limit. In the more recent lower frequency fast wave experiments, electron interaction (heating and current drive) is observed at the center of the discharge, where slow waves are not present.

7824 (GA-A–21507) **Fuel ion rotation measurement and its implications on H-mode theories.** Kim, J. (General Atomics, San Diego, CA (United States)); Burrell, K.H.; Gohil, P.; Groebner, R.J.; Hinton, F.L.; Kim, Y.B.; Seraydarian, R.; Mandl, W.; Wade, M.R. General Atomics, San Diego, CA (United States). Oct 1993. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-89ER51114. (CONF-9311147–2: IAEA meeting on H-mode physics, Naka (Japan), 15-17 Nov 1993). Order Number DE94004860. Source: OSTI; NTIS; INIS; GPO Dep.

Poloidal and toroidal rotation of the fuel ions (He^{2+}) and the impurity ions (C^{6+} and B^{5+}) in H-mode helium plasmas have been investigated in the DIII-D tokamak by means of charge exchange recombination spectroscopy, resulting in the discovery that the fuel ion poloidal rotation is in the ion diamagnetic drift direction while the impurity ion rotation is in the electron diamagnetic drift direction. The radial electric field obtained from radial force balance analysis of the measured pressure gradients and rotation velocities is shown to be the same regardless of which ion species is used and therefore is a more fundamental parameter than the rotation flows in studying H-mode phenomena. It is shown that the three contributions to the radial electric field (diamagnetic, poloidal rotation, and toroidal rotation terms) are comparable and consequently the poloidal flow does not solely represent the E x B flow. In the high-shear edge region, the density scale length is comparable to the ion poloidal gyroradius, and thus neoclassical theory is not valid there. In view of this new discovery that the fuel and impurity ions rotate in opposite sense, L-H transition theories based on the poloidal rotation may require improvement.

7825 (INP-MSU–92-34-283) **Laser-induced breakdown in heavy water: search for nuclear fusion evidence.** Goryachev, B.I. (and others); Kuznetsova, G.P.; Popov, Yu.V. Moskovskij Gosudarstvennyj Univ., Moscow (Russian Federation). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki. 1992. 9p. (NIIYaF-MGU–92-34-283.). Order Number DE94611496. Source: OSTI; NTIS (US Sales Only); INIS.

An attempt to detect fast neutrons yield in process of a laser-induced breakdown in heavy water (D_2O) was made. Emission of the neutrons was not detected. The upper limit of possible neutrons yield is 5 neutrons per joule of absorbed energy. 8 refs.; 2 figs.

7826 (IPP–6/313) **Nonlinear instabilities relating to negative-energy modes.** Pfirsch, D. Max-Planck-Institut fuer Plasmaphysik, Garching (Germany). Mar 1993. 26p. Order Number DE94734000. Source: OSTI; NTIS (US Sales Only); INIS.

The nonlinear instability of general linearly stable systems allowing linear negative-energy perturbations is investigated with the aid of a multiple time scale formalism. It is shown that the basic equations thus obtained imply resonance conditions and possess inherent symmetries which lead to the existence of similarity solutions of these equations. These solutions can be of an explosive type, oscillatory or static. It is demonstrated that at least some of the oscillatory and static solutions are normally linearly unstable. (orig.). 5 figs.

7827 (JET-R–93-04) **Application of dynamic response analysis to JET heat pulse data.** Griguoli, A. (Technische Univ. Eindhoven (Netherlands)); Sips, A.C.C. Commission of the European Communities, Abingdon (UK). JET Joint Undertaking. Sep 1993. 18p. Order Number DE94611460. Source: OSTI; NTIS (US Sales Only); INIS.

The plasma dynamic response can be used to study transport processes in a tokamak plasma. A method has been developed for the application of dynamic response analysis to study perturbations away from the plasma equilibrium. In this report perturbations on the electron temperature following a sawtooth collapse in the center of the plasma are considered. The method has been used to find mathematical description of a series of heat pulses at the Joint European Torus project (JET). From the plasma dynamic response, the time constants which characterise the heat pulse are obtained. These time constants are compared to the transport coefficients found in previous analysis of the JET heat pulse data. Various methods are discussed for applying dynamic response analysis to JET heat pulse data. (author).

7828 (LRP–477/93) **An experimental study of the harmonics generated during Alfven wave heating in TCA.** Borg, G.C. (Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP)); Lister, J.B.; Dalla Piazza, S.; Martin, Y. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). Jun 1993. 20p. Order Number DE94611467. Source: OSTI; NTIS; INIS.

During plasma excitation by high power Alfven waves in TCA, signals at harmonics of the generator frequency are observed in the plasma scrape-off layer. In this paper we report experimental investigations of the sheath effect and the excitation efficiency and dispersion properties of these harmonics. The results indicate that the harmonics arise either directly or indirectly through the driven Alfven waves and not the sheath effect at the exciting antenna. The RF ion saturation current is observed a non-negligible peak amplitude in comparison to the time averaged ion saturation current and may provide evidence of non-linear evolution of the driven Alfven waves. (author) 8 figs., 8 refs.

7829 (LRP–479/93) **Time-resolved measurements of highly-polymerised negative ions in rf silane plasma deposition experiments.** Howling, A.A. (Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP)); Sansonnens, L.; Dorier, J.L.; Hollenstein, C. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). Jul 1993. 47p. Order Number DE94611447. Source: OSTI; NTIS; INIS.

The time-resolved fluxes of negative polysilicon hydride ions from a power-modulated rf silane plasma have been measured by quadrupole mass spectrometry and modeled using a simple polymerisation scheme. Experiments were performed with plasma parameters suitable for high-quality amorphous silicon deposition. Polysilicon hydride anions diffuse from the plasma with low energy (approximately 0.5 eV) during the afterglow after the electron density has decayed and the sheath fields have collapsed. The mass-dependence of the temporal behavior of the anion loss flux demonstrates that the plasma composition is influenced by the modulation frequency. The negative species attain much higher masses than the positive or neutral species, and anions containing as many as sixteen silicon atoms have been observed, corresponding to the 500 amu limit of the mass spectrometer. This suggests that negative ions could be the precursors to particle formation. Ion-molecule and ion-ion reactions are discussed and a simple negative ion polymerisation scheme is proposed which qualitatively reproduces the experimental results. The model shows that the densities of high mass negative ions in the plasma are strongly reduced by modulation frequencies near 1 kHz. Each plasma period is then too short for the polymerisation chain to propagate to high masses before the elementary anions are lost in each subsequent afterglow period. This explains why modulation of the rf power can reduce particle contamination. We conclude that, for the case of silane rf plasmas, the initiation steps which ultimately lead to particle contamination proceed by negative ion polymerisation. (author) 15 figs., 72 refs.

7830 (LRP–480/93) **Active feedback stabilization of axisymmetric modes in highly elongated tokamak plasmas.** Ward, D.J. (Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP)); Hofmann, F. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). Jul 1993. 36p. Order Number DE94611468. Source: OSTI; NTIS; INIS.

Active feedback stabilization of the vertical instability is studied for highly elongated tokamak plasmas ($1 \leq \kappa \leq 3$), and evaluated in particular for the TCV configuration. It is shown that the feedback can strongly affect the form of the eigenfunction for these highly elongated equilibria, and this can have detrimental effects on the ability of the feedback system to properly detect and stabilize the plasma. A calculation of the vertical displacement that uses poloidal flux measurements, poloidal magnetic field measurements, and corrections for the vessel eddy currents and active feedback currents was found to be effective even in the cases with the worst deformations of the eigenfunction. We also examine how these deformations affect differently shaped equilibria, and it is seen that the magnitude of the deformation of the eigenfunction is strongly function of the plasma elongation. (author) 15 figs., 13 refs.

7831 (LRP–481/93) **Stochastic plasma heating by electrostatic waves: a comparison between a particle-in-cell simulation and a laboratory experiment.** Fivaz, M. (Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP)); Fasoli, A.; Appert, K.; Trans, T.M.; Tran, M.Q.; Skiff, F. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). Aug 1993. 21p. Order Number DE94611489. Source: OSTI; NTIS; INIS.

Dynamical chaos is produced by the interaction between plasma particles and two electrostatic waves. Experiments performed in a linear magnetized plasma and a 1D particle-in-cell simulation agree qualitatively: above a threshold wave amplitude, ion stochastic diffusion and heating occur on a fast time scale. Self-consistency appears to limit the extent of the heating process. (author) 5 figs., 18 refs.

7832 (LRP–482/93) **Diagnostics of particle genesis and growth in RF silane plasmas by ion mass spectrometry and light scattering.** Hollenstein, C. (Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP)); Dorier, J.L.; Dutta, J.; Howling, A.A. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). Aug 1993. 26p. (CONF-9308202–: Formation, transport and consequences of particles in plasmas, Chateau de Bonas (France), 30 Aug - 3 sep 1993). Order Number DE94611448. Source: OSTI; NTIS; INIS.

NATO Advanced Research Workshop.

Experimental identification of the precursors and processes leading to particles is essential for understanding particulate contamination in deposition plasmas. We have investigated particle formation in rf plasmas using light scattering (elastic and inelastic) and quadrupole ion mass spectrometry as complementary plasma diagnostics. Negative ions reach high masses (at least 500 amu) and are the only elementary species with a residence time on the scale of the powder formation time. Furthermore, a negative ion polymerisation scheme shows that the densities of high mass anions are strongly diminished at kHz power modulation frequencies, where reduced powder production is also observed. We conclude that negative ions are the particle precursors and that initial clusters grow by negative ion polymerisation in silane plasmas. In situ light scattering techniques are described to self-consistently determine particle size, number density and refractive index. Novel, visible photoluminescence measurements from particles suspended in the plasma are also reported. These diagnostics demonstrate that particle evolution proceeds by an agglomeration phase and that the particle properties are different from the bulk material early in the particle development. (author) 9 figs., 45 refs.

7833 (LRP–484/93) **Mode competition and startup in cylindrical cavity gyrotrons using high-order operating modes.** Whaley, D.R. (Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP)); Tran, M.Q.; Tran, T.M.; Antonsen, T.M. Jr. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). Oct 1993. 38p. Order Number DE94611498. Source: OSTI; NTIS; INIS.

The problem of mode competition in cylindrical cavity gyrotrons is considered. The normalized variable equations are used to calculate the oscillation regions of possible operating modes in the energy-velocity-pitch-angle plane. The analysis is self-consistent and includes the effect of changing beam current, pitch angle, and energy during the startup phase. The time evolution of beam parameters during startup is computed for several types of startup methods and used to determine the oscillating cavity modes during startup. Depending on the type of startup chosen, the cavity can be made to oscillate in several modes or in a single chosen operating mode -even for high order modes where many other possible operating modes exist. Some startup methods are seen to be less favorable than others, allowing for oscillation of unwanted modes and some methods are seen to be more sensitive to small beam/cavity misalignment. The accessibility to the high-efficiency hard excitation region can also be determined and is seen to depend on the startup scenario. The method is general and can be applied to any operating mode with the mode competition analysis specifically useful for high order modes where the spectrum is dense. The analysis of the accessibility to the hard excitation region is applicable to high and low order operating modes. Both q=1 and q=2 longitudinal mode numbers are considered. (author) 14 figs., 12 refs.

7834 (LRP–485/93) **A 3-D Fokker-Planck code for studying parallel transport in tokamak geometry with arbitrary collisionalities and application to neoclassical resistivity.** Sauter, O. (Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP)); Harvey, R.W.; Hinton, F.L. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). Oct 1993. 8p. Order Number DE94611461. Source: OSTI; NTIS; INIS.

A new 3-D Fokker-Planck code, CQL, which solves the Fokker-Planck equations with two velocity coordinates and one spatial coordinate parallel to the magnetic field lines B/B, has been developed. This code enables us to model the parallel transport for low, intermediate and high collisional regime. The physical model, the possible relevant applications of the code as well as a first application, the computation of the neoclassical resistivity for various collisionalities and aspect ratios in tokamak geometry are presented. (author) 3 figs., 3 refs.

7835 (ORNL/FTR–4785) **Travel to Austria and the Netherlands to attend the 12th Meeting of the Atomic and Molecular Data Centers and ALADDIN Network: Foreign trip report, September 18–29, 1993.** Havener, C.C. Oak Ridge National Lab., TN (United States). 14 Oct 1993. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE94002185. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The 12th Meeting of the Atomic and Molecular Data Centers and ALADDIN Network allowed each represented data center to present technical aspects and current projects in order to improve the efficiency of data exchange among the centers. The second IAEA meeting was concerned with assessing the current data situation for collision processes involving medium- and high-Z plasma impurities, particularly in view of International Thermonuclear Experimental Reactor (ITER) design needs. The laboratory visit to Utrecht provided an in-depth and up-to-date assessment of the ion-atom ionization experiment and allowed discussions concerning future experimental effort at ORNL.

7836 (ORNL/FTR–4843) **Travel to Germany to attend the International Thermonuclear Experimental Reactor (ITER) RF Technical Meeting: Foreign trip report, October 19–27, 1993.** Swain, D.W.; Hoffman, D.J. Oak Ridge National Lab., TN (United States). 24 Nov 1993. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE94003791. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The International Thermonuclear Experimental Reactor (ITER) Joint Central Team (JCT) held an RF Technical Meeting at the Co-Center at Garching, Germany, from October 21–26, 1993, with participants from the JCT and the four parties. The meeting covered the design and R&D for the ITER electron cyclotron (ECH) and ion cyclotron (ICH) systems. Primary conclusions of the meeting were: Either ECH or ICH could heat ITER to ignition. If Rebut-Lallia-Watkins scaling is correct, 50 MW of power would be adequate; if achieving H-mode is required for ignition, 100–200 MW might be required to exceed the H-mode threshold. The primary R&D needed to achieve an ECH system is development of a 1 MW, steady-state gyrotron microwave source at 160 GHz with a reliable vacuum window. For ICH, sources are commercially available; primary R&D needed is development and testing of a reliable Faraday shield design. RF systems should be designed to do current drive "experiments." Steady-state current-driven operation at full design plasma current (25 MA) is not required; however, steady-state operation at reduced plasma parameters should be achievable with the initial heating and current drive system.

7837 (ORNL/FTR–4849) **Travel to Japan for the Fourth IAEA Technical Committee meeting on H-mode physics: Foreign trip report, October 12–19, 1993.** Hillis, D.L.; Carreras, B.A. Oak Ridge National Lab., TN (United States). 19 Dec 1993. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE94004871. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The purpose of this trip was to participate in the Fourth IAEA Technical Committee Meeting on H-mode Physics. The travelers presented papers on "Dynamics of L to H Bifurcation" (B.A. Carreras) and "Helium Transport and Exhaust studies of H-mode discharges in the DIII-D Tokamak" (D.L. Hillis). The workshop highlighted the recent H-mode studies of the major international tokamak programs: ASDEX, DIII-D, JET, JT-60U, JFT-2M and the recent H-mode studies on the W-VIIAS and CHS stellarators. Following the workshop, an additional day was spent discussing upcoming experiments on JT-60U and possible areas for future collaboration and modeling.

7838 (PPPL–2948) **ICRF heating of TFTR deuterium supershot plasmas in the ^{3}He minority regime.** Taylor, G. (Princeton Univ., NJ (United States). Plasma Physics Lab.); Wilson, J.R.; Goldfinger, R.C. Princeton Univ., NJ (United States). Plasma Physics Lab. Jan 1994. 36p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. Order Number DE94005545. Source: OSTI; NTIS; INIS; GPO Dep.

The increased core electron temperature produced by ICRF heating of TFTR, D-T neutral-beam-heated supershot plasmas is expected to extend the alpha particle slowing down time and hence enhance the central alpha particle pressure. In preparation for the TFTR D-T operational phase, which is due to start in late 1993, a series of experiments were conducted on TFTR to explore the effect of ICRF heating on the performance and stability of low recycling, deuterium supershot plasmas in the ^{3}He minority heating regime. The coupling of up to 7.4 MW of 47 MHz ICRF power to full size ^{3}He minority, deuterium supershots heated with up to 30 MW of deuterium neutral beam injection has resulted in a significant increase in core electron temperature. Simulations of equivalent D-T supershots predict that such ICRF heating should result in approximately a 60% increase in the alpha particle slowing down time and an enhancement of about 30% in the central alpha pressure. Future experiments to be conducted at ICRF powers up to 12.5MW during the upcoming TFTR D-T campaign may result in even greater enhancements in core alpha parameters. This paper presents results from experiments performed at an axial toroidal magnetic field of ~4.8T, where the minority resonance was within 0.1–0.15 m of the plasma core. Combined ICRF and neutral beam heating powers in these experiments reached TFTR record levels of over 37 MW, which allowed an exploration of the power loading limits on the carbon limiter tiles. The plasma current was operated at 1.85 and 2.2 MA and sawtooth suppression was observed at the higher plasma current.

7839 (PPPL–2951) **Cyclotron subharmonics resonant (CSR) heating.** Abe, H. Princeton Univ., NJ (United States). Plasma Physics Lab. Jan 1994. 73p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. Order Number DE94005541. Source: OSTI; NTIS; INIS; GPO Dep.

The cyclotron subharmonics resonant (CSR) heating mechanism is studied using particle simulation codes with an emphasis on the relationship between CSR and the nonlinear Landua damping.

7840 (PPPL–2952) **Experimental study of magnetic reconnection during a sawtooth crash in a high temperature tokamak plasma.** Yamada, M. (Princeton Univ., NJ (United States). Plasma Physics Lab.); Manickam, J.; Pomphrey, N.; Levinton, F.M.; Nagayama, Y. Princeton Univ., NJ (United States). Plasma Physics Lab. Jan 1994. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. Order Number DE94005537. Source: OSTI; NTIS; INIS; GPO Dep.

Magnetic reconnection is investigated in high temperature TFTR tokamak plasmas by a set of non-perturbative diagnostics. During the crash phase of sawtooth oscillations in the plasma discharges, the ECE (electron cyclotron emission) diagnostic measures a fast flattening of the 2-D electron temperature profile in a poloidal plane, an observation consistent with the Kadomtsev reconnection theory. On the other hand motional Stark effect(MSE) measurements indicate that central q values do not relax to unity after the crash, but increase only by 5-10%, typically from 0.7 to 0.75. The latter result is in contradiction with the models of Kadomtsev and/or Wesson. A heuristic model for the magnetic reconnection at the sawtooth crash is also presented.

7841 (PPPL–2953) **The theory of stabilization of sawtooth oscillations in TFTR supershots.** Zakharov, L. (Princeton Univ., NJ (United States). Plasma Physics Lab.); Levinton, F.; Migliuolo, S.; Rogers, B. Princeton Univ., NJ (United States). Plasma Physics

THE PAPER AND INK USED IN THE ORIGINAL PUBLICATION MAY AFFECT THE QUALITY OF THE MICROFORM EDITION.

Lab. Nov 1993. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. Order Number DE94005539. Source: OSTI; NTIS; INIS; GPO Dep.

A theoretical concept of onset and stabilization of sawtooth oscillations in tokamaks is formulated based on the analysis of supershots in the Tokamak Fusion Test Reactor (TFTR). While the linear theory, which includes the ideal m = 1 mode, contradicts the experimental data, the criterion of ω^*-stabilization of the collisionless m = 1 reconnection mode determines an operational space for the sawtooth-free phase in TFTR.

7842 (PPPL–2956) **Poloidal flux linkage requirements for the International Thermonuclear Experimental Reactor.** Jardin, S.C.; Kessel, C.; Pomphrey, N. Princeton Univ., NJ (United States). Plasma Physics Lab. Jan 1994. 36p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. Order Number DE94005538. Source: OSTI; NTIS; INIS; GPO Dep.

We have applied two computational models to calculate the poloidal flux linkage requirements for the current ramp-up and for the flattop phase of the proposed International Thermonuclear Experimental Reactor (ITER). For the current ramp-up phase, we have used the TSC code to simulate the entire current ramp-up period as described in the TAC-3 Physics Report. We have extended the time of the simulation to cover the full current penetration time, that is, until the loop voltage is a constant throughout the plasma. Sensitivity studies have been performed with respect to current ramp-up time, impurity concentration, and to the time of onset of auxiliary heating. We have also used a steady state plasma equilibrium code that has the constant loop voltage constraint built in to survey the dependence of the steady state loop-voltage on the density and temperature profiles. This calculation takes into account the plasma bootstrap current contribution, including noncircular and collisional corrections. The results can be displayed as contours of the loop-voltage on a POPCON like diagram.

7843 (UCRL-ID–115497) **O-shell emission of uranium in a high temperature, low density plasma.** Fournier, K.B. (Lawrence Livermore National Lab., CA (United States)); Osterheld, A.L.; Goldstein, W.H.; Finkenthal, M.; Holmes, C.P.; Moos, H.W. Lawrence Livermore National Lab., CA (United States). Dec 1993. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE94004281. Source: OSTI; NTIS; INIS; GPO Dep.

We present models for the soft X ray emission spectra of UXXIV, UXXV, UXXX, UXXXI and UXXXII under tokamak conditions. The spectra are calculated from collisional-radiative models and cover the 60 to 200Å range. A fully relativistic parametric potential code has been used for the ab initio atomic structure calculations, and electron impact excitation rates have been computed in the distorted wave approximation. The ions considered here display a range of spectroscopic phenomena to be found in the O-shell of heavy elements, that can be compared with experimental observations. These include the configuration interaction between $5s^25p^65d^{k-1}5f$ and $5s^25p^55d^{k+1}$ in ions with $5s^25p^65d^k$ ground configurations, represented by UXXIV (k=l), configuration interaction between $5s^25p^{k-1}5d$ and $5s^25p^{k+1}$ in ions with $5s^25p^k$ ground configurations, such as UXXX (k=l); the unique system of satellite emission lines to the resonant 5s-5p transitions in UXXXII arising from highly metastable $4f^{13}5s^2$ levels; and the bright, isolated resonant lines associated with the closed shell UXXXI and systems.

7844 (ANL/EP/CP–79903) **Design windows for a He cooled fusion reactor.** Sze, Dai-Kai; Hassanein, A. Argonne National Lab., IL (United States). Oct 1993. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-931018–72: Symposium on fusion engineering, Hyannis, MA (United States), 11-15 Oct 1993). Order Number DE94004626. Source: OSTI; NTIS; INIS; GPO Dep.

A design window concept is developed for a He-cooled fusion reactor blanket and divertor design. This concept allows study of a parameter regime under which a possible design exists with different design requirements, such as allowable pumping fraction. The concept identifies not only the required parameter regime, but also investigates the robustness of the design, i.e., the validity of the design with change of design parameters and requirements. Some recent directions of helium cooled design for ITER and for divertor can also be explained by this design window concept.

7845 (ANL/EP/CP–79904) **Liquid metal MHD and heat transfer in a tokamak blanket slotted coolant channel.** Reed, C.B. (Argonne National Lab., Chicago, IL (United States)); Hua, T.Q.; Black, D.B.; Kirillov, I.R.; Sidorenkov, S.I.; Shapiro, A.M.; Evtushenko, I.A. Argonne National Lab., IL (United States). [1993]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-931018–73: Symposium on fusion engineering, Hyannis, MA (United States), 11-15 Oct 1993). Order Number DE94004622. Source: OSTI; NTIS; INIS; GPO Dep.

A liquid metal MHD (Magnetohydrodynamic)/heat transfer test was conducted at the ALEX (Argonne Liquid Metal Experiment) facility of ANL (Argonne National Laboratory), jointly between ANL and NIIEFA (Efremov Institute). The test section was a rectangular slotted channel geometry (meaning the channel has a high aspect ratio, in this case 10:1, and the long side is parallel to the applied magnetic field). Isothermal and heat transfer data were collected. A heat flux of ~9 W/cm^2 was applied to the top horizontal surface (the long side) of the test section. Hartmann Numbers to 1050 (2 Tesla), interaction parameters to 9×10^3, Peclet numbers of 10–200, based on the half-width of the small dimension (7mm), and velocities of 1–75 cm/sec. were achieved. The working fluid was NaK (sodium potassium eutectic). All four interior walls were bare, 300-series stainless steel, conducting walls.

7846 (ANL/FPP/TM–268) **Modelling erosion damage from low-energy plasma gun simulations of disruptions.** Ehst, D.A.; Hassanein, A. Argonne National Lab., IL (United States). Oct 1993. 41p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE94005196. Source: OSTI; NTIS; INIS; GPO Dep.

Energy transfer to material surfaces is dominated by photon radiation through low temperature plasma vapors if tokamak disruptions are due to low kinetic energy particles ($\lesssim$ 100 eV). Simple models of radiation transport are derived and incorporated into a fast-running computer routine to model this process. The results of simulations are in good agreement with plasma gun erosion tests on several metal targets.

7847 (CONF-931018–43) **High-speed repetitive pellet injector for plasma fueling of magnetic confinement fusion devices.** Combs, S.K. (and others); Baylor, L.R.; Foust, C.R. Oak Ridge National Lab., TN (United States). [1993]. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From Symposium on fusion engineering; Hyannis, MA (United States); 11-15 Oct 1993. Order Number DE94002792. Source: OSTI; NTIS; INIS; GPO Dep.

The projected fueling requirements of future magnetic confinement devices for controlled thermonuclear research [e.g., the International Thermonuclear Experimental Reactor (ITER)] indicate that a flexible plasma fueling capability is required. This includes a mix of traditional gas puffing and low- and high-velocity deuterium-tritium pellets. Conventional pellet injectors (based on light gas guns or centrifugal accelerators) can reliably provide frozen hydrogen pellets (1- to 6-mm-diam sizes tested) up to ~1.3-km/s velocity at the appropriate pellet fueling rates (1 to 10 Hz or greater). For long-pulse operation in a higher velocity regime (>2 km/s), an experiment in collaboration between Oak Ridge National Laboratory (ORNL) and ENEA Frascati is under way. This activity will be carried out in the framework of a collaborative agreement between the US Department of Energy and European Atomic Energy Community – ENEA Association. In this experiment, an existing ORNL hydrogen extruder (equipped with a pellet chambering mechanism/gun barrel assembly) and a Frascati two-stage light gas gun driver have been combined on a test facility at ORNL. Initial testing has been carried out with single deuterium pellets accelerated up to 2.05 km/s with the two-stage driver; in addition, some preliminary repetitive testing (to commission the diagnostics) was performed at reduced speeds, including sequences at 0.5 to 1 Hz and 10 to 30

pellets. The primary objective of this study is to demonstrate repetitive operation (up to ~1 Hz) with speeds in the 2- to 3-km/s range. In addition, the strength of extruded hydrogen ice as opposed to that produced in situ by direct condensation in pipe guns can be investigated. The equipment and initial experimental results are described.

7848 (CONF-931018–64) **Rf modeling and design of a folded waveguide launcher for the Alcator C-Mod tokamak.** Bigelow, T.S. (Oak Ridge National Lab., TN (United States)); Fogelman, C.F.; Baity, F.W.; Carter, M.D.; Hoffman, D.J.; Ryan, P.M.; Yugo, J.J.; Golovato, S.N.; Bonoli, P. Oak Ridge National Lab., TN (United States). [1993]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From Symposium on fusion engineering; Hyannis, MA (United States); 11-15 Oct 1993. Order Number DE94003588. Source: OSTI; NTIS; INIS; GPO Dep.

The folded waveguide (FWG) launcher is being investigated as an improved antenna configuration for plasma heating in the ion cyclotron range of frequencies (ICRF). A development FWG launcher was successfully tested at Oak Ridge National Laboratory (ORNL) with a low-density plasma load and found to have significantly greater power density capability than current strap-type antennas operating in similar plasmas. To further test the concept on a high density tokamak plasma, a collaboration has been set up between ORNL and Massachusetts Institute of Technology (MIT) to develop and test an 80-MHz, 2-MW FWG on the Alcator C-Mod tokamak at MIT. The radio frequency (rf) electromagnetic modeling techniques and laboratory measurements used in the design of this antenna are described in this paper. A companion paper describes the mechanical design of the FWG.

7849 (CONF-931018–65) **Design of folded waveguide antenna for Alcator C-Mod.** Fogelman, C.H. (Oak Ridge National Lab., TN (United States)); Bigelow, T.S.; Carter, M.D.; Hoffman, D.J.; Riemer, B.W.; Yugo, J.J.; Golovato, S.N.; Bonoli, P. Oak Ridge National Lab., TN (United States). [1993]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From Symposium on fusion engineering; Hyannis, MA (United States); 11-15 Oct 1993. Order Number DE94003584. Source: OSTI; NTIS; INIS; GPO Dep.

The Oak Ridge National Laboratory (ORNL) ion cyclotron range of frequencies (ICRF) antenna for Alcator C-Mod is a folded waveguide (FWG) antenna designed to determine whether the FWG can serve as a high power density, ceramic-free antenna for both present heating and fast wave current drive (FWCD) applications and for future tokamaks such as the International Thermonuclear Experimental Reactor (ITER) and the Tokamak Physics Experiment (TPX). The FWG is particularly attractive because it has a low internal electric field per unit power coupled to the Plasma. This results in more power capability and has been demonstrated by 1-MW (unloaded) tests on the Radio Frequency Test Facility (RFTF). The experiment will characterize the impact of an FWG on impurity control in the presence of high power density and on central heating. The antenna is designed to withstand the tokamak environment, including high heat fluxes, high-temperature bakeout, and major disruptions, without vacuum leaks. The front face is curved to fit the plasma outline. Two front plates are fabricated for the antenna one with full-width slits at every other location between vanes and the other with alternating right and left half-width slits at every location between vanes for pi-phasing.

7850 (CONF-931018–74) **Argon frost continuous cryopump for fusion applications.** Foster, C.A.; McCurdy, H.C. Cryogenic Applications F, Inc., Clinton, TN (United States). [1993]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-91ER81236. From Symposium on fusion engineering; Hyannis, MA (United States); 11-15 Oct 1993. Order Number DE94004478. Source: OSTI; NTIS; INIS; GPO Dep.

A cryopumping system based on the snail continuous cryopump concept is being developed for fusion applications under a DOE SBIR grant. The primary pump is a liquid helium cooled compound pump designed to continuously pump and fractionate deuterium/tritium and helium. The D/T pumping stage is a 500 mm bore cryocondensation pump with a nominal pumping speed of 45,000 L/s. It will be continuously regenerated by a snail regeneration by head every 12 minutes. Continuous regeneration will dramatically reduce the vulnerable tritium inventory in a fusion reactor. Operating at an inlet pressure of 1 millitorr, eight of these pumps could pump the projected D/T flow in the ITER CDA design while reducing the inventory of tritium in the pumping system from 630 to 43 grams. The helium fraction will be pumped in a compound argon frost stage. This stage will also operate continuously with a snail regeneration head. In addition the argon spray head will be enclosed inside the snail, thereby removing gaseous argon from the process chamber. Since the cryocondensation stage will intercept over 90% of the D/T/H steam, a purified stream from this stage could be directly reinjected into the plasma as gas or pellets, thereby bypassing the isotope separation system and further simplifying the fuel cycle. Experiments were undertaken in Phase I which demonstrated continuous cryosorption pumping of hydrogen on CO_2 and argon frosts. The pumping system and its relevance to fusion reactor pumping will be discussed.

7851 (DOE/ER/10388–T1) **Helium production cross sections for fusion-energy neutrons: Final report, [March 1, 1979–December 31, 1986].** Kneff, D.W. Rockwell International Corp., Canoga Park, CA (United States). Rocketdyne Div. Mar 1987. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AT03-79ER10388. Order Number DE94003920. Source: OSTI; NTIS; INIS; GPO Dep.

Cross section measurements Completed under this program include 25 pure elements and 33 separated isotopes at a neutron energy of ~14.8 MeV. These measurements provide a large helium generation data base for fusion reactor materials applications that was not previously available, and satisfies most of the (n,xα) cross section requests to the DOE Nuclear Data Committee at this energy. They also provide a strong data base for nuclear model validation. The measured cross sections are in good agreement with other published measurements in most cases where comparisons are available. Additional measurements were initiated at RTNS-II to extend this data base to other materials of importance for fusion reactor applications. This program also included the development of a constant temperature furnace to extend our measurement capabilities to lower helium concentrations. The use of this furnace was demonstrated successfully, and its application included the measurement of several small cross sections reported here for 14.8-MeV neutrons. The constant temperature furnace was developed for measurements at lower neutron energies, and its successful provided an enhanced capability to proceed with those operation measurements.

7852 (DOE/ER/51124–13) **Ideal pre-conceptual design development.** Gentzlinger, R. (Grumman Corp., Princeton, NJ (United States)); Mendelsohn, S.; Abel, B. Grumman Corp., Princeton, NJ (United States); Princeton Univ., NJ (United States). Plasma Physics Lab. [1993]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-89ER51124 ; AC02-76CH03073. (CONF-931018–76: Symposium on fusion engineering, Hyannis, MA (United States), 11-15 Oct 1993). Order Number DE94004965. Source: OSTI; NTIS; INIS; GPO Dep.

A preconceptual design has been produced for a plasma device to further divertor concepts and validate technology in support of the International Thermonuclear Experimental Reactor program. The ITER Diverter Experiment and Laboratory (IDEAL) design effort is to develop a reliable, maintainable and robust facility for steady-state divertor simulation experiments. The configuration includes a 30 meter vacuum vessel, enclosed within a set of 30 high field superconducting solenoid modules, a resistive quadrupole coil set, a radio-frequency heating system and a complement of diagnostics. It is planned to utilize existing facilities, and off-the-shelf hardware, wherever possible to maximize technological return on investment.

7853 (DOE/ER/52111–6) **Application of railgun principle to high-velocity hydrogen pellet injection for magnetic fusion reactor fueling: Progress report, October 1, 1992–September 30, 1993.** Kim, Kyekyoon; Zhang, Jianhua. Illinois Univ., Urbana, IL (United States). Fusion Technology Lab. [1993]. 85p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-84ER52111. Order Number DE94004411. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses research being conducted on hydrogen pellet acceleration by railgun accelerators for fueling magnetic fusion reactors.

7854 (DOE/ER/52158–11) **Fusion reactor systems studies: Progress report, November 1, 1992–October 31, 1993.** Wisconsin Univ., Madison, WI (United States). Fusion Technology Inst. 9 Sep 1993. 142p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-89ER52158. Order Number DE94003162. Source: OSTI; NTIS; INIS; GPO Dep.

Fusion Technology Institute personnel actively participated in the ARIES/PULSAR project during the present contract period. Numerous presentations were made at PULSAR project meetings, major contributions were written for the ARIES-II/IV Final Report presentations and papers were given at technical conferences contributions were written for the ARIES Lessons Learned report and a very large number of electronic-mail and regular-mail communications were sent. The remaining sections of this progress report win summarize the work accomplished and in progress for the PULSAR project during the contract period. The main areas of effort are: PULSAR Research; ARIES-II/IV Report Contributions; ARIES Lessons Learned Report Contributions; and Stellarator Study.

7855 (DOE/FTR–93018044) **Travel to France, Germany and the United Kingdom to participate in fusion technology program reviews and planning meetings: Foreign trip report, October 26–November 6, 1991.** McGrath, R.T. Sandia National Labs., Albuquerque, NM (United States). 11 Nov 1991. 17p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. Order Number DE93018044. Source: OSTI; NTIS (US Sales Only); GPO Dep.

Fusion technology program reviews and planning meetings. The status of projects in progress was reported and program goals for FY92 defined. On Monday and Tuesday, 28–29 October 1991, a Program Review for the US-EC Bilateral Implementing Agreement on Tore Supra was held in Cadarache. Topics covered included exchanges on the pellet injector, the RF antennas, the pump limiter and a proposed new exchange on high beta poloidal experiments and analysis of confinement on Tore Supra. On Wednesday, October 30, 1991, I attended the Overview Presentations covering the US/KFA Bilateral Agreement on TEXTOR. Some recent results from TEXTOR were reported. A status report and recent results from the ALT-II pump limiter program was reported. Plans and schedule for the upgrade of TEXTOR were presented. On Monday and Tuesday, November 4–5, 1991, I visited JET. I was hosted by M. Pick and E. Deksnis. We discussed (1) the current divertor performance on JET, (2) design and high heat flux testing of the Mark I inertially cooled beryllium block divertor and the Mark II actively cooled Be brazed divertor and (3) the experiments taking place during that week on JET using tritium neutral beams.

7856 (DOE/FTR–93018123) **Travel to Osaka, Japan for the International Atomic Energy Agency Technical Committee Meeting on drivers for inertial confinement fusion in Osaka, Japan: Foreign trip report, April 13–21, 1991.** Quintenz, J.P. Sandia National Labs., Albuquerque, NM (United States). 23 Apr 1991. 26p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. Order Number DE93018123. Source: OSTI; NTIS (US Sales Only); GPO Dep.

This was the first meeting of the Technical Committee on Drivers for Inertial Confinement Fusion (ICF) to be held since 1983. Many speakers commented on the need to have more meetings of this group to speed the advance of our understanding by improving communications between the various scientists working in the field. A strong correlation was drawn between the magnetic fusion energy (MFE) community's open scientific exchange and rapid advances made. The point made was that ICF could benefit from a similar atmosphere of open exchange. Marshall Sluyter called this the "decade of the upgrades" with most major facilities either in the process of upgrading or with designs for such upgrades. He also said that there was an air of expectancy in the US ICF community. Many talks were devoted to plans and expectations for the upgraded facilities. It was very clear from the discussions I had with many participants that budgets are a problem world wide in the ICF community. New facilities may be delayed and progress will be slowed by these budget problems. The atmosphere, however, was still hopeful and positive.

7857 (DOE/FTR–93018257) **Participation in the Second International Symposium on Fusion Nuclear Technology: Foreign trip report, May 31–June 12, 1991.** Herring, J.S. EG and G Idaho, Inc., Idaho Falls, ID (United States). 5 Aug 1991. 55p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. Order Number DE93018257. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The primary purpose for this trip was to attend the Second International Symposium on Fusion Nuclear Technology (ISFNT-2) and there to present an invited paper which reviewed recent work on fusion reactor safety. In addition, meetings were held at the Institut fuer Technische Physik (ITP) of the Kernforschungszentrum Karlsruhe (KfK) to discuss future plans for analyses and experiments in superconducting magnet safety and at the Institut fuer Neutronenphysik und Reaktortechnik (INR) of KfK to discuss the transfer of the UFOTRI code to the Fusion Safety Program. As originally planned, this trip was to last until June 22 and was to include chairing an IEA workshop on future directions in superconducting magnet safety research and attendance of a workshop on superconducting magnet energy storage, both at KfK. However, because the magnet designers from NET were not willing at this time to take part in the workshop, we decided to delay the workshop for about 6 months.

7858 (DOE/FTR–93018326) **Travel to Japan for meeting on drivers for Inertial Confinement Fusion: Foreign trip report, April 13–21, 1991.** Ramirez, J.J. Sandia National Labs., Albuquerque, NM (United States). [1991]. 29p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. Order Number DE93018326. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The primary purpose of this trip was to present a technical paper at the IAEA Technical Committee Meeting on Drivers for Inertial Confinement Fusion held April 13–21, 1991 in Osaka, Japan. The paper 1 presented was entitled "Intense Light-Ion Beams Provide A Robust, Common Driver Path Towards Ignition, Gain and Commercial Fusion Energy." The talk describes the path we are pursuing at Sandia in developing intense ion beams as a viable ICF driver. There was much interest expressed in understanding our approach towards ignition in an upgraded facility at Sandia, our design for a high-gain Laboratory Microfusion Facility, and the LIBRA concept for a commercial fusion reactor. In general, the conference provided me with a very good overview on the scope and status of the various national research efforts on ICF drivers. I also made personal contacts with various research scientists in Japan that could result in significant benefit to the US light-ion beam driver development program. A key interest is the work of S. Miyamoto, et al. on two-stage ion diode experiments at the Institute of laser Engineering (ILE) using an inductive voltage adder accelerator. They reported efficient diode operation, performance consistent with the theory of these diode published by Slutz and Desjarlais (SNL), and a factor of two reduction in the beam divergence in the two-stage geometry vs that observed in the single-stage configuration. We started a low-level experimental effort on 2-stage diodes at Sandia earlier this year. Multi-stage acceleration offers significant potential advantages for future ICF drivers.

7859 (DOE/FTR–93018328) **Travel to Europe concerning beryllium plasma spray research: Foreign trip report, June 1–9, 1991.** Smith, M.F. Sandia National Labs., Albuquerque, NM (United States). 25 Jun 1991. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. Order Number DE93018328. Source: OSTI; NTIS (US Sales Only); GPO Dep.

Mark Smith met with members of the First Wall Component Development Group at the Joint European Torus (JET) in Culham, England. These meetings focused on past and proposed research and development at Sandia National Laboratories and Los Alamos National Laboratory concerning plasma sprayed beryllium coatings for first wall and other high heat flux applications in magnetic confinement fusion energy devices. The JET representatives expressed considerable interest in this work, and these discussions may lead to JET supported projects in this area at Sandia and/or

Los Alamos. Dr. Michael Pick, Leader of the JET First Wall Components Group, will visit Sandia and perhaps Los Alamos in August,1991, for follow-up discussions on potential joint beryllium research. Dr. Smith also presented a paper entitled, "Plasma Sprayed Materials for Magnetic Fusion Energy Devices," at the 2nd Plasma Technik Symposium in Lucerne, Switzerland. This paper was well received and generated significant interest among conference participants. During the conference. Mark Smith also obtained interesting new information regarding some developments in plasma spray technology in Europe. He also toured the manufacturing plant of the major European supplier of vacuum plasma spray equipment.

7860 (DOE/FTR–93018329) **Travel to Berlin, Germany for conference on Controlled Fusion and Plasma Physics: Foreign trip report, June 1–8, 1991.** Snipes, J.A. Massachusetts Inst. of Tech., Cambridge, MA (United States). Plasma Fusion Center. 25 Jun 1991. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-90ER54084. Order Number DE93018329. Source: OSTI; NTIS (US Sales Only); GPO Dep.

Dr. J.A. Snipes, a staff member at the MIT Plasma Fusion Center, attended the 18th European Physical Society Conference on Controlled Fusion and Plasma Physics held in Berlin, Germany from 3–7 June 1991. The conference included results from laboratories throughout the world such as JET, ASDEX, JT60 and JT60-U, TEXTOR, TFTR, DIII-D, TEXT, ATF, PBX, FTU, Tore Supra, T-10 and T-15, COMPASS, and the ZIE, Berlin. The purpose of the trip was to present results of "Wall Conditioning by Lithium Pellet Injection on TFTR" that has been accomplished over the past year through an arrangement between the MIT Plasma Fusion Center and Princeton Plasma Physics Laboratory, funded by DOE Grant No. FG02-90ER54084, "Impurity Pellet Experiment at TFTR."

7861 (DOE/FTR–93018607) **Travel to Germany for ITER task negotiations: Foreign trip report, July 11–17, 1993.** Wilson, K.L. Sandia National Labs., Livermore, CA (United States). 28 Jul 1993. 144p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DR00789. Order Number DE93018607. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The purpose of this meeting was to give feedback on the draft Request for Proposals that had been issued by the Garching JCT Co-Center. In the areas of (1) First Wall/Blanket/Shield, (2) Divertor Plasma Interface, and (3) Plasma Heating and Diagnostics. Also, the meeting was supposed to clarify the activities to be carried out for credit under the CY1993 Emergency Task Agreement. Representatives of the Home Teams from the US, EC, and Japan were present the meeting. Unfortunately, the Russian Federation was unable to send any representatives to the meeting. Instead, their positions were communicated by faxed reports.

7862 (DOE/FTR–93018761) **Travel to Japan to attend the US-Japan RF Heating Technology Workshop: Foreign trip report, February 24–March 9, 1991.** Takase, Yuichi. Massachusetts Inst. of Tech., Cambridge, MA (United States). Plasma Fusion Center. 4 Apr 1991. 17p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-78ET51013. Order Number DE93018761. Source: OSTI; NTIS (US Sales Only); GPO Dep.

This trip report was prepared by Yuichi Takase, Research Scientist at the MIT Plasma Fusion Center. The purpose of the trip was to attend the US-Japan RF Heating Technology Workshop Naka, Ibaraki-ken, Japan. More detailed information on ICRF antenna design and other aspects of ICRF heating, which is not obtainable through workshop presentations alone, were obtained from subsequent visits to JAERI, Toshiba (Yokohama) and National Institute for Fusion Science (Nagoya). Construction of JT-60U has been completed and coil tests are under progress. They will start operation by the end of March. There is significant upgrade in the ICRF heating system with two large antennas and a planned power upgrade to 9.5 MW with the replacement of final amplifier tubes to X2274. There is also significant upgrade in the NBI capability, including a plan for 500 kV negative NBI in 1994. ECH is also scheduled for 1994, and they have started a significant R&D effort in this area, including gyrotron development in collaboration with Toshiba. National Institute for Fusion Science (NIFS) has started construction of the Large Helical Device, which is scheduled to start operating in 1997. There will be significant rf program in both ECH and ICRF with about 10 MW each, in addition to 20 MW of NBI. There are smaller-scale experiments on JFT-2M, JIPPT- IIU, WT-3, and TRIAM-IM tokamaks.

7863 (DOE/FTR–93018765) **Participation in the IEA workshop on low activation materials: Foreign trip report, April 8–12, 1991.** Piet, S.J. EG and G Idaho, Inc., Idaho Falls, ID (United States). 23 Apr 1991. 20p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. Order Number DE93018765. Source: OSTI; NTIS (US Sales Only); GPO Dep.

With six other Americans I participated in the IEA Workshop on Low Activation Materials (LAMs) hosted by Culham Labs in the United Kingdom on April 8–12, 1991. The body of this trip report describes the objectives, major results and conclusions, and major recommendations as I see them. The other Americans at the meeting are more knowledgeable than I with regard to material science and neutronics/activation calculations. Thus, I focus my trip report on safety and environmental criteria and ramifications. In summary, this meeting was one of the most productive of any international meeting I've ever attended. We made great progress in forming a consensus on defining LAMs. I want to commend the head of the US delegation, Bill Wiffen, and our Culham hosts for their highly successful efforts to organize and plan this meeting. This meeting has moved the fusion community another step closer to LAMs in commercial fusion power plants. Naturally, there are future steps to take, which are the subject of my recommendations listed later.

7864 (DOE/FTR–93019137) **Travel to Germany to discuss European licensing of potential ITER design options: Foreign trip report, July 10–17, 1993.** Petti, D.A. EG and G Idaho, Inc., Idaho Falls, ID (United States). 4 Aug 1993. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. Order Number DE93019137. Source: OSTI; NTIS (US Sales Only); GPO Dep.

This report discusses European licensing of potential ITER design options.

7865 (DOE/FTR–93019285) **Participation in the US-Japan workshop on physics issues for steady state tokamaks: Foreign trip report, June 27–July 3, 1993.** Bonoli, P.T. Massachusetts Inst. of Tech., Cambridge, MA (United States). Plasma Fusion Center. 18 Aug 1993. 17p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-78ET51013. Order Number DE93019285. Source: OSTI; NTIS (US Sales Only); GPO Dep.

This trip report summarizes the main points and conclusions of a US-Japan Workshop on Physics Issues for Safety State Tokamaks. The important elements for steady state reactor operation are reviewed and the successful demonstration of these key elements in existing and future experiments is discussed.

7866 (DOE/FTR–94001285) **Travel to France to discuss with the Tore Supra staff the repair and reinstallation of the Phase III Outboard Limiter: Foreign trip report, September 19–25, 1993.** Nygren, R.E. Sandia National Labs., Albuquerque, NM (United States). 29 Sep 1993. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. Order Number DE94001285. Source: OSTI; NTIS (US Sales Only); GPO Dep.

This trip covered the time at Tore Supra when repairs on the Phase III Outboard Limiter are nearing completion and the schedule for reinstallation of the limiter is being discussed. The trip coincided with the Specialists' Workshop on High Heat Flux Component Cooling hosted by Cadarache under the auspices of CEA (Commisariat a L'Energie Atomique) - Euratom. The schedule for the reinsertion of the Phase III Outboard Limiter could be as early as late October. However, it appears that the desire to continue the physics program without interruptions may delay this reinsertion. The Workshop, an informal annual meeting of experts in thermal-hydraulics applied to fusion, was excellent. The group noted significant (much needed) additions to experimental data on samples with one-sided heating. A new model by Celata (ENEA, Italy) for Critical Heat Flux, which combined several physically based models, showed excellent agreement with the data base, an advance all the more

impressive because of its lack of any empirical constants. A correlation by Yin (AECL, Canada) of subcooled boiling over the parameter range of interest in fusion showed much better agreement with selected data than the often used Thom's correlation.

7867 (DOE/FTR–94001875) **Travel to England for conference on gyrotron and high power microwave research: Foreign trip report, September 4–11, 1993.** Kreischer, K.; Temkin, R. Massachusetts Inst. of Tech., Cambridge, MA (United States). Plasma Fusion Center. 28 Oct 1993. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FC02-93ER54186. Order Number DE94001875. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The primary purpose of the trip was to attend the conference in England, where recent progress in gyrotron and high power microwave research outside the US was discussed. We also presented talks on "A quasi-optical mode converter for gyrotrons operating in high order modes" and "High frequency, megawatt gyrotron experiments at M.I.T."

7868 (DOE/FTR–94001876) **Travel to Germany and Italy for meetings on fusion reactor materials: Foreign trip report, September 21–October 8, 1993.** Longhurst, G.R. EG and G Idaho, Inc., Idaho Falls, ID (United States). 25 Oct 1993. 65p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. Order Number DE94001876. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The report summarizes technical presentations in the Carbon Materials workshop, but for the other meetings, only those technical points of particular interest to fusion safety concerns or other programmatic activities are related. Also, I had a number of conversations with researchers and presenters. Where those conversations are of interest, they are also related. I toured a number of facilities, but no effort is made to describe them here since they are well known. Attachments to the report include attendee lists and agendas for the meetings and a summary of a concept for a collaborative research program that may may involve the INEL and JRC Ispra.

7869 (DOE/FTR–94002747) **Travel to Italy for Workshop on Plasma Edge Theory in Fusion Devices: Foreign trip report, October 1–10, 1993.** Rognlien, T.D. Lawrence Livermore National Lab., CA (United States). 28 Oct 1993. 25p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE94002747. Source: OSTI; NTIS (US Sales Only); GPO Dep.

This workshop has always been held in Europe and focuses on progress in theoretical analysis of edge plasmas in fusion devices; both analytical and numerical work was presented. Local arrangements were made by the Max Planck Institute fuer Plasmaphysik, Garching, Germany in cooperation with KFA Juelich, Germany, the European Community, the USDOE, and the International School of Plasma Physics, "Piero Caldirola," in Varenna. The plan is to hold the meeting in the US in 1995, in order to be on alternate years with the Plasma Surface Interaction Conference which focuses more on experimental edge plasma results. As a brief summary, a number of codes have investigated gaseous diverters, and typically find that very high gas and/or plasma densities are required to remove the exhaust power for ITER. Impurity injection reduces the density needed but it is difficult for the impurities to penetrate unless by some type of direct (pellet) injection. Existing fluid models are lacking adequate kinetic descriptions of several physical processes. Theory has identified a number of instability mechanism for turbulence. While nonlinear analysis is in its early stages, some scaling of anomalous diffusion coefficients to new devices is possible. Comparison of theory and codes with experimental data needs more attention. I found the meeting very helpful for learning the present status of edge plasma theory and for discussing our results with other researchers.

7870 (DOE/FTR–94004970) **Travel to Switzerland to discuss the design of the ITER long-length quench experiment: Foreign trip report, November 14–21, 1993.** Schultz, J. Massachusetts Inst. of Tech., Cambridge, MA (United States). Plasma Fusion Center. 19 Nov 1993. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FC02-93ER54186. Order Number DE94004970. Source: OSTI; NTIS (US Sales Only); GPO Dep.

On Nov. 16-17, the author met with Drs. George Vecsey, Alexander Anghel, and Ingo Rohleder of the Paul Scherrer Institute in Villigen, Switzerland, to discuss the design of the ITER long-length quench experiment. The purpose of the meetings with laboratory personnel was to exchange information on the laboratory facilities and the U.S. contribution to the experiment, while exploring areas of technical agreement and disagreement. On Nov. 18-19, he met with Nishio Koizumi of JAERI, A. Anghel, G. Vecsey, Claudio Marinucci and Gabriel Pasztor of PSI,and Heinrich Katheder of NET, in order to reach an agreement on the characteristics of the long-length quench experiment (LLQE) design.

7871 (GA-A–21426) **Surface impurity removal from DIII-D graphite tiles by boron carbide grit blasting.** Lee, R.L.; Hollerbach, M.A.; Holtrop, K.L.; Kellman, A.G.; Taylor, P.L.; West, W.P. General Atomics, San Diego, CA (United States). Nov 1993. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-89ER51114. (CONF-931018–71: Symposium on fusion engineering, Hyannis, MA (United States), 11-15 Oct 1993). Order Number DE94004188. Source: OSTI; NTIS; INIS; GPO Dep.

During the latter half of 1992, the DIII-D tokamak at General Atomics (GA) underwent several modifications of its interior. One of the major tasks involved the removal of accumulated metallic impurities from the surface of the graphite tiles used to line the plasma facing surfaces inside of the tokamak. Approximately 1500 graphite tiles and 100 boron nitride tiles from the tokamak were cleaned to remove the metallic impurities. The cleaning process consisted of several steps: the removed graphite tiles were permanently marked, surface blasted using boron carbide (B_4C) grit media (approximately 37 μm. diam.), ultrasonically cleaned in ethanol to remove loose dust, and outgassed at 1000°C. Tests were done using, graphite samples and different grit blaster settings to determine the optimum propellant and abrasive media pressures to remove a graphite layer approximately 40-50 μm deep and yet produce a reasonably smooth finish. EDX measurements revealed that the blasting technique reduced the surface Ni, Cr, and Fe impurity levels to those of virgin graphite. In addition to the surface impurity removal, tritium monitoring was performed throughout the cleaning process. A bubbler system was set up to monitor the tritium level in the exhaust gas from the grit blaster unit. Surface wipes were also performed on over 10% of the tiles. Typical surface tritium concentrations of the tiles were reduced from about 500 dpm/100 cm^2 to less than 80 dpm/100 cm^2 following the cleaning. This tile conditioning, and the installation of additional graphite tiles to cover a high fraction of the metallic plasma facing surfaces, has substantially reduced metallic impurities in the plasma discharges which has allowed rapid recovery from a seven-month machine opening and regimes of enhanced plasma energy confinement to be more readily obtained. Safety issues concerning blaster operator exposure to carcinogenic metals and radioactive tritium will also be addressed.

7872 (GA-A–21445) **Upgrade of DIII-D toroidal magnetic field power supply controls.** Petrach, P.M.; Rouleau, A.R.; McNulty, R.D.; Patrick, D.B.; Walin, J.L. General Atomics, San Diego, CA (United States). Nov 1993. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-89ER51114. (CONF-931018–70: Symposium on fusion engineering, Hyannis, MA (United States), 11-15 Oct 1993). Order Number DE94004184. Source: OSTI; NTIS; INIS; GPO Dep.

The toroidal magnetic field power supply for the DIII-D tokamak is of the 12 pulse line commutated variety. It consists of four individual modules and a main system control cabinet which are combined to deliver 127,000 A and 1000 V to the toroidal field coil. The modules are connected in a series-parallel configuration but can be run alone or two at a time as well. Normally on DIII-D experiments, the series-parallel configuration is required. The original design provided each individual module with its own voltage and current control loop and a main control loop. A problem with this design was that the individual control loops would cause a current sharing imbalance in the parallel modules if the calibrated loops drifted by the slightest amount. It was determined that individual control loops were not needed and a single phase lock firing circuit

was employed in the system cabinet with fiber optic links to the modules for gate drive signals. Since all four modules have to be on line for DIII-D to operate, a problem in any of the five E&I control loops resulted in the supply, and, therefore, the tokamak, being idled. By reducing the number of control loops to one, the sharing problem was eliminated, as well as 4 out of 5 potential control failures. The original supply employed relay logic for sequence control and fault monitoring. There were over 130 relays in each module plus an additional 100 in the system cabinet. The combination of the number of relays with the required interconnecting wiring, the age of the supply, the vibrations of the cabinets and the harsh environment, resulted in a continuously escalating number of phantom, and often intermittent, faults. The fault and sequence logic relays were replaced by a new Programmable Logic Controller (PLC). All existing interconnect wire was removed and replaced with multiconductor cables that connect directly from fault sensors and input devices to the PLC.

7873 (GA-A–21485) **A robust helium-cooled shield/blanket design for ITER.** Wong, C.P.C. (and others); Bourque, R.F.; Baxi, C.B. General Atomics, San Diego, CA (United States). Nov 1993. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-89ER51114. (CONF-931018–61: Symposium on fusion engineering, Hyannis, MA (United States), 11-15 Oct 1993). Order Number DE94003402. Source: OSTI; NTIS; INIS; GPO Dep.

General Atomics Fusion and Reactor Groups have completed a helium-cooled, conceptual shield/blanket design for ITER. The configuration selected is a pressurized tubes design embedded in radially oriented plates. This plate can be made from ferritic steel or from V-alloy. Helium leakage to the plasma chamber is eliminated by conservative, redundant design and proper quality control and inspection programs. High helium pressure at 18 MPa is used to reduce pressure drop and enhance heat transfer. This high gas pressure is believed practical when confined in small diameter tubes. Ample industrial experience exists for safe high gas pressure operations. Inboard shield design is highlighted in this study since the allowable void fraction is more limited. Lithium is used as the thermal contacting medium and for tritium breeding, its safety concerns are minimized by a modular, low inventory design that requires no circulation of the liquid metal for the purpose of heat removal. This design is robust, conservative, reliable, and meets all design goals and requirements. It can also be built with present-day technology.

7874 (GA-A–21494) **ARIES-IV Nested Shell Blanket Design.** Wong, C.P.C. (General Atomics, San Diego, CA (United States)); Redler, K.; Reis, E.E.; Will, R.; Cheng, E.; Hasan, C.M.; Sharafat, S. General Atomics, San Diego, CA (United States). Nov 1993. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-89ER51114. (CONF-931018–62: Symposium on fusion engineering, Hyannis, MA (United States), 11-15 Oct 1993). Order Number DE94003403. Source: OSTI; NTIS; INIS; GPO Dep.

The ARIES-IV Nested Shell Blanket (NSB) Design is an alternate blanket concept of the ARIES-IV low activation helium-cooled reactor design. The reference design has the coolant routed in the poloidal direction and the inlet and outlet plena are located at the top and bottom of the torus. The NSB design has the high velocity coolant routed in the toroidal direction and the plena are located behind the blanket. This is of significance since the selected structural material is SiC-composite. The NSB is designed to have key high performance components with characteristic dimensions of no larger than 2 m. These components can be brazed to form the blanket module. For the diverter design, we eliminated the use of W as the divertor coating material by relying on the successful development of the gaseous divertor concept. The neutronics and thermal-hydraulic performance of both blanket concepts are similar. The selected blanket and divertor configurations can also meet all the projected structural, neutronics and thermal-hydraulics design limits and requirements. With the selected blanket and divertor materials, the design has a level of safety assurance rate of I (LSA-1), which indicates an inherently safe design.

7875 (INIS-mf–13761) **Report 1991-1992 Association Euratom-Confederation Suisse.** Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). May 1993. 148p. Order Number DE94611506. Source: OSTI; NTIS; INIS.

This is the first integrated biannual report of the Swiss-Euratom Association, one of the twelve Associations of the European programme for controlled nuclear fusion research. Up until now, each Swiss group presented its activities within the framework of the institution to which it belonged. The report of the CRPP, whose research is almost entirely dedicated to fusion, gave a good picture of the Swiss programme in physics but the important technological activities of the PSI were described separately in the PSI report, out of its natural context and buried amongst a multitude of other projects. We hope that this report will contribute to a better knowledge of the Association and appreciation of its work. It is also the answer to an old Euratom desire to have each Association publish such an integrated report of its activities. (author) 69 figs., tabs., refs.

7876 (IPP–1/274) **The new centrifuge high-speed pellet injector for ASDEX Upgrade.** Lang, P.T.; Andelfinger, C.; Beck, W.; Buchelt, E.; Buechl, K.; Cierpka, P.; Kollotzek, H.; Lang, R.S.; Prausner, G.; Soeldner, F.X.; Ulrich, M.; Weber, G. Max-Planck-Institut fuer Plasmaphysik, Garching (Germany). Apr 1993. 30p. Order Number DE94734001. Source: OSTI; NTIS (US Sales Only); INIS.

We report on the new pellet injection system for refuelling the ASDEX Upgrade tokamak with cubic H_2 or D_2 pellets having alternative side lengths of 1.5, 1.75 and 2.0 mm and optional Ne doping. The system delivers series of about one hundred pellets at a maximum repetition rate of more than 40 Hz. The pellets are accelerated by means of a centrifuge with an optimized straight acceleration arm. This configuration minimizes the compulsive force acting on the pellet during the acceleration process. Since this also minimizes stresses inside the pellet, high velocities - a maximum of 1211 m/s being achieved - are possible without destroying the hydrogen cubes. A special pellet feed-in technique based on a static stop cylinder interrupting the acceleration path successfully reduced the horizontal scattering angle to values of less than $\pm$ 4 degrees. Thus, a high efficiency - with more than 90% of the pellets arriving within the acceptance angle - was achieved without using a guide tube. The whole system was found to work very reliably and reproducibly during the whole test operation period, covering about 10^5 pellet shots. The new centrifuge, now integrated into the ASDEX Upgrade setup, has proved to be a reliable unit even for long operation periods thus affording the possibility of quasicontinuous particle refuelling throughout a plasma discharge in ASDEX Upgrade. (orig.)

7877 (IPP–3/189) **The isotope effect in ASDEX.** Bessenrodt-Weberpals, M.; Wagner, F. ASDEX Team. Max-Planck-Institut fuer Plasmaphysik, Garching (Germany). Jan 1993. 75p. Order Number DE94734002. Source: OSTI; NTIS (US Sales Only); INIS.

This paper describes the effect of the isotopic mass on plasma parameters as observed in the ASDEX tokamak. The paper comprises Ohmic as well as L-mode, H-mode and H*-mode scenarios. The measurements reveal that the ion mass is a substantial and robust parameter which affects all confinement times (energy, particle and momentum) in the whole operational window. Both, core properties like the sawtooth repetition time and edge properties like the separatrix density change with the isotopic mass. Specific emphasis is given to the edge parameters and changes of the edge plasma due to different wall conditioning such as carbonization and boronization. The pronounced isotope dependence of edge and divertor parameters are explained by the secondary effect of different power fluxes into the scrape-off layer plasma and onto the divertor plates. Finally, the observations serve to test different transport theories. With respect to the ion temperature gradient driven turbulence, the isotope effect is also studied in pellet refuelled discharges with peaked density profiles. The results from ASDEX are compared with those from other experiments. (orig.)

7878 (IPP–5/51) **Profile constraining mechanism for T_e profile invariance in tokamaks.** Becker, G. Max-Planck-Institut fuer Plasmaphysik, Garching (Germany). Mar 1993. 14p. Order Number DE94733999. Source: OSTI; NTIS (US Sales Only); INIS.

A new model for the electron temperature profile resilience in the outer half of tokamak plasmas is proposed and investigated. It is

shown that introducing a negative feedback term into the scaling of the electron heat diffusivity $\chi_e(r) = \chi_{ee}(r)(1-\alpha a^2/T_{eo}\ d^2T_e/dr^2)$ with $\alpha >$ or ≈ 3 results in the observed T_e profile stiffness against variations of the density and heating profiles. In addition, the feedback by itself yields the measured approximately linear $T_e(r)$ shape for $r/a >$ or ≈ 0.5 in contrast to previous profile constraining models. (orig.). 6 figs.

7879 (KFK–5060) **CETA, a step towards a low activation martensitic steel.** Anderko, K.; Ehrlich, K.; Schaefer, L.; Schirra, M. Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Materialforschung; Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Kernfusion. Jun 1993. 53p. (In German). Order Number DE94734059. Source: OSTI; NTIS (US Sales Only); INIS.

The conventional martensitic 9-12% CrMoV Nb steel, type MANET/W.nr. 1.4914, an European reference, shows promising properties for an application as "First Wall" - and as structural material for fusion devices. One of few drawbacks is the high neutron-induced, longterm activation through elements like Mo, Ni and Nb. The substitution of these important alloying elements by W and Ta leads to a new group of 8-10% Cr W V Ta alloys, to which the steel CETA belongs. Activation calculations indicate that a reduction of longterm activation can be achieved through this compositional change. Investigations of CETA revealed that this new steel is fully martensitic without any δ-ferrite formation, and grain-refinement can fully be achieved by Ta alloying. The alloy exhibits good hardenability and tempering behaviour. The transformation behaviour is very similar to that of the CrMoVNb steels. The tensile-, creep- and creep rupture-properties satisfy the requirements, the impact properties correspond to the values measured for the MANET material. Further improvement of all properties seems to be possible through optimization of the chemical composition of this new steel. (orig.)

7880 (KFK–5104) **Gas purification by use of hot metal getter beds.** Albrecht, H. Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Radiochemie; Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Kernfusion. Nov 1992. 68p. Order Number DE94734013. Source: OSTI; NTIS (US Sales Only); INIS.

An experimental program is described which was performed in the frame of a tritium technology task for the NET/ITER fusion fuel cycle. The aim was to investigate commercial gas purifiers containing metallic getters for the purification of gas streams such as the plasma exhaust gas. Five purifiers with up to 3000g of getter material were tested in the PEGASUS facility mainly with respect to the removal of methane, which is known to be much more difficult to remove than other impurities like O_2, N_2, or CO. A proposal for a fuel cleanup method based on a combination of getter beds and Pd/Ag diffusors is presented as the main conclusion of the test program. The discussion of this method includes the aspects of flow rates, tritium inventory, and consumption of getter material. (orig.)

7881 (LA-UR–93-3647) **Recovery of hydrogen from impurities using a palladium membrane reactor.** Willms, R.S. (Los Alamos National Lab., NM (United States)); Okuno, K. Los Alamos National Lab., NM (United States). [1993]. 7p. Sponsored by USDOE, Washington, DC (United States);Japan Atomic Energy Research Inst., Tokyo (Japan). DOE Contract W-7405-ENG-36. (CONF-931018–69: Symposium on fusion engineering, Hyannis, MA (United States), 11-15 Oct 1993). Order Number DE94003976. Source: OSTI; INIS; NTIS; GPO Dep.

One of the important steps in processing the exhaust from a fusion reactor is recovering tritium which is incorporated into molecules such as water and methane. One device which may prove to be very effective for this purpose is a palladium membrane reactor. This is a reactor which incorporates a Pd/Ag membrane in the reactor geometry. Reactions such as water gas shift, steam reforming and methane cracking can be carried out over the reactor catalyst, and the product hydrogen can be simultaneously removed from the reacting mixture. Because product is removed, greater than usual conversions can be obtained. In addition ultrapure hydrogen is produced, eliminating the need for an additional processing step. A palladium membrane reactor has been built and tested with three different catalysts. Initial results with a Ni-based catalyst show that it is very effective at promoting all three reactions listed above. Under the proper conditions, hydrogen recoveries approaching 100% have been observed. This study serves to experimentally validate the palladium membrane reactor as potentially important tool for fusion fuel processing.

7882 (LA-UR–93-3655) **Cryogenic adsorption of low-concentration hydrogen on charcoal, 5A molecular sieve, sodalite, ZSM-5 and Wessalith DAY.** Willms, R.S. Los Alamos National Lab., NM (United States). [1993]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-931018–68: Symposium on fusion engineering, Hyannis, MA (United States), 11-15 Oct 1993). Order Number DE94003975. Source: OSTI; NTIS; INIS; GPO Dep.

The separation of low-concentration hydrogen isotopes from helium is a processing step that is required for ceramic lithium breeding blanket processing. Cryogenic adsorption is one method of effecting this separation. In this study live adsorbents were considered for this purpose: charcoal, 5A molecular sieve, UOP S-115, ZSM-5 and Wessalith DAY. The first two adsorbents exhibit good equilibrium loadings and are shown to be quite effective at adsorbing low-concentration hydrogen isotopes. The latter three adsorbents display considerably lower equilibrium loadings. This study concludes that by using either charcoal or 5A molecular sieve, cryogenic adsorption would be an effective means of separating hydrogen isotopes from helium.

7883 (LA-UR–93-3665) **Application of sidestream recycle to the separation of hydrogen isotopes by cryogenic distillation.** Sherman, R.H. (Los Alamos National Lab., NM (United States)); Taylor, D.J.; Barnes, J.W.; Yamanishi, T.; Enoeda, M.; Konishi, S.; Okuno, K. Los Alamos National Lab., NM (United States). [1993]. 4p. Sponsored by USDOE, Washington, DC (United States);Japan Atomic Energy Research Inst., Tokyo (Japan). DOE Contract W-7405-ENG-36. (CONF-931018–44: Symposium on fusion engineering, Hyannis, MA (United States), 11-15 Oct 1993). Order Number DE94002713. Source: OSTI; NTIS; INIS; GPO Dep.

Withdrawal of a sidestream from an isotopic-separation distillation column followed by equilibration of species and reinjection is a technique for reducing the required number of columns and hence reducing tritium inventories in fusion-energy fuel processing systems. Measurements have been made with a single column and the three-component H_2-HD-D_2 system withdrawing streams of essentially pure H_2 and D_2. This was followed by single column measurements with the full HDT system and a column inventory of ca. 16.8 moles (H/D/T = 0.043/0.528/0.429). Rather pure T_2 (ca. 98.7 mol%) was produced as one of the products. This would previously have required two separate distillation columns with an inventory of ca. 16 moles of T_2 as compared with 7.2 moles of T_2 in these experiments. The dynamic response of the H-D system was followed using in-situ laser Raman spectroscopy to obtain product compositions and column composition profiles.

7884 (LA-UR–93-4234) **Performance of a 14-MeV neutron generator as an in situ calibration source for TFTR.** Roquemore, A.L. (Princeton Univ., NJ (United States). Plasma Physics Lab.); Jassby, D.L.; Johnson, L.C.; Strachan, J.D.; Barnes, C.W. Los Alamos National Lab., NM (United States); Princeton Univ., NJ (United States). Plasma Physics Lab. 14 Oct 1993. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36 ; AC02-76CH03073. (CONF-931018–77: Symposium on fusion engineering, Hyannis, MA (United States), 11-15 Oct 1993). Order Number DE94004993. Source: OSTI; NTIS; INIS; GPO Dep.

TFTR will soon enter its D-T phase with the introduction of tritium. This will result in the production of neutrons having 14-MeV energy which is significantly greater than the 2.5-MeV neutrons encountered during D-D operation. In preparation for the D-T phase, a calibration of the four neutron detection systems was performed using a 14-MeV neutron generator producing 10^8 n/sec. To account for the spatial extent of the toroidally shaped plasma and for neutrons scattered from surrounding structures, detector responses were determined with the source positioned at many locations inside the vacuum vessel. Before the generator could be used as a calibration source, a characterization of its total yield and angular emission properties was obtained. The total yield was determined by aluminum activation methods to within $\pm 6\%$, while the angular

emission was found to be anisotropic in the forward and reverse cones along the generator axis. After the characterization was performed, the generator was mounted on a moveable track inside the vacuum vessel, where it could be remotely moved across the view of each detector. This paper presents details of the methods and results of the source characterization, together with initial results of the in-vessel D-T neutron calibration.

7885 (LA-UR–93-4482) **Atomic processes in Inertial Electrostatic Confinement (IEC) devices.** Nebel, R.A. (Los Alamos National Lab., NM (United States)); Turner, L.; Tiouririne, T.N.; Barnes, D.C.; Nystrom, W.D.; Bussard, R.W.; Miley, G.H.; Javedani, J.; Yamamoto, Y. Los Alamos National Lab., NM (United States). [1993]. 10p. Sponsored by USDOE, Washington, DC (United States);Department of Defense, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9309119–2: 9. biennial topical conference on atomic processes in plasmas, San Antonio, TX (United States), 19-23 Sep 1993). Order Number DE94005015. Source: OSTI; NTIS; INIS; GPO Dep.

Inertial Electrostatic Confinement (IEC) is one of the earliest plasma confinement concepts, having first been suggested by P. T. Farnsworth in the 1950s. The concept involves a simple apparatus of concentric spherical electrostatic grids or a combination of grids and magnetic fields. An electrostatic structure is formed from the confluence of electron or ion beams. Gridded IEC systems have demonstrated neutron yields as high as $2*10^{10}$ neutrons/sec. These systems have considerable potential as small, inexpensive, portable neutron sources for assaying applications. Neutron tomography is also a potential application. Atomic physics effects strongly influence the performance of all of these systems. Important atomic effects include elastic scattering, ionization, excitation, and charge exchange. This paper discusses how an IEC system is influenced by these effects and how to design around them. Theoretical modeling and experimental results are presented.

7886 (LBL–33798) **The induction approach to heavy ion inertial fusion: Accelerator and target considerations.** Bangerter, R.O. Lawrence Berkeley Lab., CA (United States). Aug 1993. 21p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (HIFAN–577; CONF-9305136–16: International symposium on heavy ion fusion, Frascati (Italy), 25-28 May 1993). Order Number DE94005216. Source: OSTI; NTIS; INIS; GPO Dep.

Induction acceleration is one of two principal approaches for producing ion beam for heavy-ion inertial fusion. This approach was first suggested by the late Denis Keefe of Lawrence Berkeley Laboratory and is the main approach of the US heavy-ion-fusion program. Induction accelerators have the ability to handle high beam currents; therefore, accumulation rings or storage rings are not required. This paper reviews the target and accelerator considerations that are important for the design of induction accelerators for fusion. These considerations, including some important assumptions, have led to a standard induction accelerator concept; however, a careful examination of the assumptions and considerations shows that many of them are not truly fundamental. Through improvements in technology, changes in design, and alternate ways of focusing beams, it appears possible to circumvent or relax the constraints imposed by the standard orthodoxy. If it is possible, it will lead to induction accelerators that are more efficient and less costly than the standard concept.

7887 (LBL–34231) **Heavy Ion Fusion Accelerator Research at the Lawrence Berkeley Laboratory.** Fessenden, T.J. Lawrence Berkeley Lab., CA (United States). Oct 1993. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-930929–1: 7. international conference on emerging nuclear energy systems, Makuhari (Japan), 20-24 Sep 1993). Order Number DE94003255. Source: OSTI; NTIS; INIS; GPO Dep.

Since 1993, US research toward a heavy ion inertial fusion driver has concentrated on the multiple-beam ion-induction linac. This type of accelerator is unique in its ability to continuously amplify both the beam current and energy during the acceleration process. In a conceptual driver, many beams are accelerated in parallel through common induction cores in a linac that is 5–10 km long to final energies near 10 GeV in less than 0.2 msec. Past experiments at LBL have investigated the transport of intense ion beams in alternating gradient focusing structures and the acceleration of multiple ion becomes with current amplification in an induction linac. At present our major project is the development of a pulsed, 2-MV injector that produces beams at full driver size and intensity. In addition, a major activity is the development of a physics and engineering design for a larger Induction Linac Systems Experiments (ILSE) to test in a scaled way almost all the manipulations needed in a full-scale driver. We hope to begin construction of this experiment near the beginning of 1995.

7888 (NIIYaF-MGU–92-39-288) **On physical aspects of a thermonuclear reactor with a vacuum gap between plasma and first wall.** Gertsenshtejn, M.E.; Klavdiev, V.V. Moskovskij Gosudarstvennyj Univ., Moscow (Russian Federation). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki. 1992. 39p. (In Russian). Order Number DE94611509. Source: OSTI; NTIS (US Sales Only); INIS.

The problem of controlled thermonuclear synthesis of rarefied plasma, confining by magnetic field, exists about 40 years. At the present time the problem solution follows in the traditional way of transition to larger and more expensive facilities. The way is near to saturation and its perspectives are vague. For the reasons takes place sharp decreasing of financing. Taking into account for the considerations it is expedient to analyse a nontraditional way, when between the plasma filament and first wall is formed a vacuum gap. Physical aspects of the way are considered in the paper. 28 refs.; 8 figs.

7889 (PNL-SA–22456) **Relationship between swelling and irradiation creep in cold-worked PCA stainless steel irradiated to ~178 dpa at ~400°C.** Toloczko, M.B. (Univ. of California, Santa Barbara, CA (United States). Dept. of Chemical and Nuclear Engineering); Garner, F.A. Pacific Northwest Lab., Richland, WA (United States); Northwest Coll. and Univ. Association for Science, Richland, WA (United States). Sep 1993. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830 ; FG06-89ER75522. (CONF-930928–19: 6. international conference on fusion reactor materials, Stresa (Italy), 27 Sep - 1 oct 1993). Order Number DE94004368. Source: OSTI; NTIS; INIS; GPO Dep.

The eighth and final irradiation segment for pressurized tubes constructed from the fusion Prime Candidate Alloy (PCA) has been completed in FFTF. At 178 dpa and ~400°C, the irradiation creep of 20% cold-worked PCA has become dominated by the "creep disappearance" phenomenon. The total diametral deformation rate has reached the limiting value of 0.33%/dpa at the three highest stress levels employed in this test. The stress-enhancement of swelling tends to camouflage the onset of creep disappearance, however, requiring the use of several non-traditional techniques to extract the creep coefficients. No failures occurred in these tubes, even though the swelling ranged from ~20 to ~40%.

7890 (PNL-SA–22470) **Microstructural development in irradiated vanadium alloys.** Gelles, D.S. (Pacific Northwest Lab., Richland, WA (United States)); Stubbins, J.F. Pacific Northwest Lab., Richland, WA (United States). Sep 1993. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-930928–15: 6. international conference on fusion reactor materials, Stresa (Italy), 27 Sep - 1 oct 1993). Order Number DE94004307. Source: OSTI; NTIS; INIS; GPO Dep.

Three simple vanadium alloys, V-5Al, V-1Ni, and V-2Ti-1Ni have been examined to determine the effects of fast neutron irradiation on microstructural evolution. Specimens were irradiated in EBR II at temperatures in the range 425 to 600°C to doses of 15 and 31 dpa. Each alloy responded very differently to irradiation. All V-5Al specimens were generally void-free and contained high densities of coherent precipitates, and moderate densities of network dislocations. Swelling was much higher in V-1Ni. Voids were uniformly distributed, but with widely varying shape and size. Precipitation of two types also developed. The response in V-2Ti-1Ni was intermediate to that of the other two alloys. Irradiation produced extensive precipitation of thin rods and a moderate density of large voids often associated with much larger precipitate particles. The dislocation structure strongly interacted with the rod precipitate particles.

7891 (PNL-SA–22489) **Modeling defect production in high energy collision cascades.** Heinisch, H.L. (Pacific Northwest Lab., Richland, WA (United States)); Singh, B.N.; Diaz de la Rubia, T. Pacific Northwest Lab., Richland, WA (United States). [1993]. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-930928–11: 6. international conference on fusion reactor materials, Stresa (Italy), 27 Sep - 1 oct 1993). Order Number DE94003810. Source: OSTI; NTIS; INIS; GPO Dep.

A multi-model approach roach (MMA) to simulating defect production processes at the atomic scale is described that incorporates molecular dynamics (MD), binary collision approximation (BCA) calculations and stochastic annealing simulations. The central hypothesis of the MMA is that the simple, fast computer codes capable of simulating large numbers of high energy cascades (e.g., BCA codes) can be made to yield the correct defect configurations when their parameters are calibrated using the results of the more physically realistic MD simulations. The calibration procedure is investigated using results of MD simulations of 25 keV cascades in copper. The configurations of point defects are extracted from the MD cascade simulations at the end of the collisional phase, similar to the information obtained with a binary collision model. The MD collisional phase defect configurations are used as input to the ALSOME annealing simulation code, and values of the ALSOME quenching parameters are determined that yield the best fit to the post-quenching defect configurations of the MD simulations.

7892 (PNL-SA–22545) **Effect of loading mode on the fracture toughness of a reduced activation ferritic/martensitic stainless steel.** Li, H. (Washington State Univ., Pullman, WA (United States)); Hirth, J.P.; Jones, R.H.; Gelles, D.S. Pacific Northwest Lab., Richland, WA (United States). Sep 1993. 20p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-930928–16: 6. international conference on fusion reactor materials, Stresa (Italy), 27 Sep - 1 oct 1993). Order Number DE94004290. Source: OSTI; NTIS; INIS; GPO Dep.

The critical J integrals of mode I (J_{IC}), mixed-mode I/III (J_{MC}), and mode III (J_{IIIC}) were examined for a ferritic stainless steel (F-82H) at ambient temperature. A determination of J_{MC} was made using modified compact-tension specimens. Different ratios of tension/shear stress were achieved by varying the principal axis of the crack plane between 0 and 55 degrees from the load line. The results showed that J_{MC}s and tearing moduli (T_M) varied with the crack angles and were lower than their mode I and mode III counterparts. Both the minimum J_{MC} and T_M occurred at a crack angle between 40 and 50 degrees, where σ_I/σ_{III} was 1.2 to 0.84. The J_{min} was 240 kJ/m^2, and ratios of J_{IC}/J_{min} and J_{IIIC}/J_{min} were about 2.1 and 1.9, respectively. Morphology of fracture surfaces was consistent with the change of J_{MC} and T_M values. While the upper shelf-fracture toughness of F-82H depends on loading mode, the J_{min} remains very high. Other important considerations include the effect of mixed-mode loading on the DBT temperature, and effects of hydrogen and irradiation on J_{min}.

7893 (PNL-SA–23419) **Fundamentals of defect production.** Heinisch, H.L. Pacific Northwest Lab., Richland, WA (United States). [1993]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-930928–23: 6. international conference on fusion reactor materials, Stresa (Italy), 27 Sep - 1 oct 1993). Order Number DE94004779. Source: OSTI; NTIS; INIS; GPO Dep.

This short paper discusses modeling radiation damage in the role of cluster production and mobility in thermonuclear reactor materials.

7894 (PPPL–2945) **Wall conditioning experiments on TFTR using impurity pellet injection.** Strachan, J.D. (and others); Mansfield, D.K.; Bell, M.G. Princeton Univ., NJ (United States). Plasma Physics Lab. Nov 1993. 36p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. Order Number DE94005544. Source: OSTI; NTIS; INIS; GPO Dep.

This work describes experiments intended to optimize the limiter conditioning for TFTR supershots. It is shown that deposition of thin layers of lithium on the limiters by impurity pellet injection changes the plasma-wall interaction and improves supershot performance. Series of up to ten Ohmic plasmas each with two lithium pellets were useful in preconditioning the limiter. Generally, plasma performance increased with the amount of lithium deposited up to the maximal amount which could be deposited. Experiments were performed with different materials being deposited (carbon, boron and lithium) and with different methods of deposition.

7895 (SAND–93-2512C) **The light ion LMF and its relevance to IFE.** Olson, R.E.; Allshouse, G.O.; Cook, D.L.; Lockner, T.R.; Mazarakis, M.G.; Olson, C.L.; Smith, D.L. Sandia National Labs., Albuquerque, NM (United States). 1993. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-931018–67: Symposium on fusion engineering, Hyannis, MA (United States), 11-15 Oct 1993). Order Number DE94003774. Source: OSTI; NTIS; INIS; GPO Dep.

The inertial confinement fusion (ICF) program at Sandia National Laboratories (SNL) is directed toward validating light ions as an efficient driver for ICF defense and energy applications. The light ion laboratory microfusion facility (LMF) is envisioned as a facility in which high gain ICF targets could be developed and utilized in defense-related experiments. The relevance of LMF technology to eventual inertial fusion energy (IFE) applications is assessed via a comparison of LMF technologies with those projected in the Light Ion Beam Reactor Assessment (LIBRA) conceptual reactor design study.

7896 (UCRL-ID–115480) **Scaling 2XIIB impurity radiation to BPNS.** Molvik, A.W. Lawrence Livermore National Lab., CA (United States). 3 Dec 1993. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE94004028. Source: OSTI; NTIS; INIS; GPO Dep.

In this paper the author computes the radiative power losses which would be expected from the beam-plasma neutron source, which is proposed as a neutron source for doing accelerated end-of-life testing of fusion reactor materials. The source is based on a high density tritium target, bombarded with a deuterium beam of energy 120 to 150 keV. Oxygen was observed to be a major source of power loss for beam injection into the 2XIIB device, and the author considers that problem here. Oxygen impurities are a small component of the beam. The analysis indicates that higher charge states are reached in this device, resulting in less power radiation from oxygen impurities, and the beam is expected to attain higher purity levels at pulse lengths in the seconds range, than was observed in the past for millisecond pulse lengths.

7897 (UCRL-ID–115904) **Advanced steady-state operating scenarios.** Nevins, W.M. (Lawrence Livermore National Lab., CA (United States)); Bulmer, R.H.; Pearlstein, L.D.; Haney, S.W.; Manickam, J. Lawrence Livermore National Lab., CA (United States). 2 Dec 1993. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE94004810. Source: OSTI; NTIS; INIS; GPO Dep.

The goal for advanced steady-state operation in ITER should be to demonstrate the operation of the plasma core for a steady-state fusion reactor. To accomplish this the authors must develop steady-state operating scenarios at high beta for high fusion power density, low auxiliary power requirements ($Q_{CD} \geq 25$, where $Q_{CD} \equiv P$ fusion/P_{CD} and P_{DC} is the power required for sustaining the plasma current) for low recirculating power requirements, and at moderate safety factor ($q_\psi \leq 4.5$) to minimize the cost for the tokamak core of a steady-state demonstration power reactor based on the operating modes demonstrated in ITER. The key to achieving steady-state operation at high fusion power in ITER will be the development of operating scenarios with very high bootstrap current fractions ($f_{BS} \geq 90\%$) in which the radial profile of the bootstrap current density is well aligned with that of the total plasma current density, and for which the MHD β-limit exceeds $\beta_n^* = 0.05$ T−m/MA. They are in the process of developing such operating modes for ITER. In §1 they propose two advanced steady-state operating points; a preliminary operating point that was the basis for the MHD studies reported in §2, and a second operating point that has been optimized based on the authors studies to date. In §2 they present calculations indicating that the initial operating point is stable to MHD ballooning and low-n kink modes (with a conducting wall at r = 1.25a) up to $\beta_n^* \approx 6 \times 10^{-2}$ T − m/MA. In §3 they

present a free-boundary MHD equilibrium, and show that advanced steady-state operating modes are compatible with the ITER poloidal field system and diverter.

7898 (UCRL-JC–115616) **Optimization of the National Ignition Facility primary shield design.** Annese, C.E. (California Univ., Berkeley, CA (United States). Dept. of Nuclear Engineering); Watkins, E.F.; Greenspan, E.; Miller, W.F.; Latkowski, J.; Lee, J.D.; Soran, P.; Tobin, M.L. Lawrence Livermore National Lab., CA (United States). Oct 1993. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-931018–63: Symposium on fusion engineering, Hyannis, MA (United States), 11-15 Oct 1993). Order Number DE94003622. Source: OSTI; NTIS; INIS; GPO Dep.

Minimum cost design concepts of the primary shield for the National Ignition laser fusion experimental Facility (NIF) are searched with the help of the optimization code SWAN. The computational method developed for this search involves incorporating the time dependence of the delayed photon field within effective delayed photon production cross sections. This method enables one to address the time-dependent problem using relatively simple, time-independent transport calculations, thus significantly simplifying the design process. A novel approach was used for the identification of the optimal combination of constituents that will minimize the shield cost; it involves the generation, with SWAN, of effectiveness functions for replacing materials on an equal cost basis. The minimum cost shield design concept was found to consist of a mixture of polyethylene and low cost, low activation materials such as SiC, with boron added near the shield boundaries.

99 GENERAL AND MISCELLANEOUS

7899 (DOE-STD–0103T) **TAP 3: Training Program Support Manual.** USDOE, Washington, DC (United States). Aug 1993. 206p. Sponsored by USDOE, Washington, DC (United States). Order Number DE94003653. Source: OSTI; NTIS; INIS; GPO Dep.

Superseding DOE/NE-0103T.

The Training Accreditation Program (TAP) establishes objectives and criteria against which DOE nuclear facility training is evaluated to determine readiness for accreditation. TAP 3 has been developed to assist the contractor in preparing the initial Self-Evaluation Report, Training Program Accreditation Plan, and the CSER (contractor self-evaluation report).

9901 Management

7900 (LA-UR–93-3566) **Practical problems in aggregating expert opinions.** Booker, J.M.; Picard, R.R.; Meyer, M.A. Los Alamos National Lab., NM (United States). [1993]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-940312–38: 2. Probabilistic safety assessment and management conference (PSAM), San Diego, CA (United States), 20-24 Mar 1994). Order Number DE94002623. Source: OSTI; NTIS; GPO Dep.

Expert opinion is data given by a qualified person in response to a technical question. In these analyses, expert opinion provides information where other data are either sparse or non-existent. Improvements in forecasting result from the advantageous addition of expert opinion to observed data in many areas, such as meteorology and econometrics. More generally, analyses of large, complex systems often involve experts on various components of the system supplying input to a decision process; applications include such wide-ranging areas as nuclear reactor safety, management science, and seismology. For large or complex applications, no single expert may be knowledgeable enough about the entire application. In other problems, decision makers may find it comforting that a consensus or aggregation of opinions is usually better than a single opinion. Many risk and reliability studies require a single estimate for modeling, analysis, reporting, and decision making purposes. For problems with large uncertainties, the strategy of combining as diverse a set of experts as possible hedges against underestimation of that uncertainty. Decision makers are frequently faced with the task of selecting the experts and combining their opinions. However, the aggregation is often the responsibility of an analyst. Whether the decision maker or the analyst does the aggregation, the input for it, such as providing weights for experts or estimating other parameters, is imperfect owing to a lack of omniscience. Aggregation methods for expert opinions have existed for over thirty years; yet many of the difficulties with their use remain unresolved. The bulk of these problem areas are summarized in the sections that follow: sensitivities of results to assumptions, weights for experts, correlation of experts, and handling uncertainties. The purpose of this paper is to discuss the sources of these problems and describe their effects on aggregation.

7901 (PNL-SA–22737) **Using multi-disciplinary strategic master facilities planning for organizations experiencing programmatic re-direction.** Heubach, J.G.; Weimer, W.C.; Bruce, W.A. Pacific Northwest Lab., Richland, WA (United States). [1993]. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9310100–5: Human Factors and Ergonomics Society meeting, Seattle, WA (United States), 11-15 Oct 1993). Order Number DE94003729. Source: OSTI; NTIS; GPO Dep.

Facility master planning is critical to the future productivity of a laboratory and the quality of worklife for the laboratory staff. For organizations undergoing programmatic re-direction, a master facility planning approach linked to the organization's strategic planning process is even more important. Major changes in an organization such as programmatic re-direction can significantly impact a broad range of variables which exceed the expertise of traditional planning teams, e.g., capacity variability, work team organization, organizational culture, and work process simplification. By expanding the diversity of the participants of the planning team, there is a greater likelihood that a research organization's scientific, organizational, economic, and employees' needs can be meshed in the strategic plan and facility plan. Recent recommendations from facility planners suggest drawing from diverse fields in building multi-disciplinary planning teams: Architecture, engineering, natural science, social psychology, and strategic planning (Gibson,1993). For organizations undergoing significant operational or culture change, the master facility planning team should also include members with expertise in organizational effectiveness, industrial engineering, human resources, and environmental psychology. A recent planning and design project provides an example which illustrates the use of an expanded multi-disciplinary team engaged in planning laboratory renovations for a research organization undergoing programmatic re-direction. The purpose of the proposed poster session is to present a multi-disciplinary master facility planning process linked to an organization's strategic planning process or organizational strategies.

7902 (UCRL-JC–113553) **A global overview of risk management of the DOE complex.** Alesso, H.P.; Majumdar, K.C. Lawrence Livermore National Lab., CA (United States). 10 Oct 1993. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-940312–20: 2. Probabilistic safety assessment and management conference (PSAM), San Diego, CA (United States), 20-24 Mar 1994). Order Number DE94001634. Source: OSTI; NTIS; INIS; GPO Dep.

No endeavor is risk-fire and as we realize the inherent risks in society, our only viable solution is to manage the risk. Application of an integrated risk management program of a large technological system like the DOE complex is a difficult, task; but it is the only rational means to optimize the risk-benefit equation. An effective risk management culture-within the DOE complex will in the long run, ensure a consistent response to mitigate identified risks. An effective risk management program provides responsible administrative planning and logical application of the best technical analyses. It requires the involvement of all personnel. Our objective in this paper is to point out broad perspectives that raise concerns about future DOE ask management issues and to suggest some possible remedies.

7903 (UCRL-JC–115243) **Risk management at Lawrence Livermore National Laboratory.** Cummings, G.E.; Strait, R.S. Lawrence Livermore National Lab., CA (United States). Oct 1993. 6p. Sponsored by USDOE, Washington, DC (United States). DOE

Contract W-7405-ENG-48. (CONF-940312–45: 2. Probabilistic safety assessment and management conference (PSAM), San Diego, CA (United States), 20-24 Mar 1994). Order Number DE94003369. Source: OSTI; NTIS; INIS; GPO Dep.

Managing risks at a large national laboratory presents a unique set of challenges. These challenges include the management of a broad diversity of activities, the need to balance research flexibility against management control, and a plethora of requirements flowing from regulatory and oversight bodies. This paper will present the experiences of Lawrence Livermore National Laboratory (LLNL) in risk management and in dealing with these challenges. While general risk management has been practiced successfully by all levels of Laboratory management, this paper will focus on the Laboratory's use of probabilistic safety assessment and prioritization techniques and the integration of these techniques into Laboratory operations.

7904 (UCRL-JC–115244) **Risk-based prioritization: A comparison of approaches.** Strait, R.S. Lawrence Livermore National Lab., CA (United States). Oct 1993. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-940312–47: 2. Probabilistic safety assessment and management conference (PSAM), San Diego, CA (United States), 20-24 Mar 1994). Order Number DE94003368. Source: OSTI; NTIS; GPO Dep.

the use of analytical techniques for risk-based prioritization, both quantitative and non-quantitative, is becoming much more wide spread and organizations are tailoring analytical techniques for risk management to their particular needs. This has led to the use of different techniques for different applications within the same organization, and correspondingly, the need for management to reconcile the process and results of different risk-based prioritization approaches. Different risk-based prioritization methods may be used prioritize different types of activities, but eventually these prioritizations may need to be integrated to allocate organizational resources at a higher level or to develop an overall organizational budget. This paper focuses on comparing and contrasting the different risk-based approaches. The objective is to help management understand the different approaches, choose the best approach for their needs, and reconcile different approaches.

7905 (ANL–93/40) **Using a transfer function to describe the load-balancing problem.** Conley, A.J. Argonne National Lab., IL (United States). Nov 1993. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE94004218. Source: OSTI; NTIS; GPO Dep.

The dynamic load-balancing problem for mesh-connected parallel computers can be clearly described by introducing a function that identifies how much work is to be transmitted between neighboring processors. This function is a solution to an elliptic problem for which a wealth of knowledge exists. The nonuniqueness of the solution to the load-balancing problem is made explicit.

7906 (ANL/MCS/CP–81643) **The PRISM project: Infrastructure and algorithms for parallel eigensolvers.** Bischof, C. (Argonne National Lab., IL (United States)); Sun, X.; Huss-Lederman, S.; Tsao, A. Argonne National Lab., IL (United States). [1993]. 10p. Sponsored by USDOE, Washington, DC (United States);Department of Defense, Washington, DC (United States). DOE Contract W-31109-ENG-38. DM28E04120. (CONF-9310220–4: Institute of Electrical and Electronic Engineers (IEEE) meeting on scalable parallel libraries, Starkville, MS (United States), 6-8 Oct 1993). Order Number DE94005125. Source: OSTI; NTIS; GPO Dep.

The goal of the PRISM project is the development of infrastructure and algorithms for the parallel solution of eigenvalue problems. We are currently investigating a complete eigensolver based on the Invariant Subspace Decomposition Algorithm for dense symmetric matrices (SYISDA). After briefly reviewing the SYISDA approach, we discuss the algorithmic highlights of a distributed-memory implementation of an eigensolver based on this approach. These include a fast matrix-matrix multiplication algorithm, a new approach to parallel band reduction and tridiagonalization, and a harness for coordinating the divide-and-conquer parallelism in the problem. We also present performance results of these kernels as well as the overall SYISDA implementation on the Intel Touchstone Delta prototype and the IBM SP/1.

7907 (CEA-N–2734) **Oceanic circulation code on connection machine.** Vitart, F. CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France). 1993. 23p. (In French). Order Number DE94728750. Source: OSTI; NTIS (US Sales Only).

This paper describes a OPA7 computer code used for modelling global climate. Global climate model is obtained by coupling ocean model with atmosphere model. In the present OPA7 code, the equations used are Navier-Stokes equations and Dirichlet boundary conditions.

7908 (DOE/ER/25053–T2) **Applied analysis/computational mathematics: Final report 1993.** Lax, P.; Berger, M. New York Univ., NY (United States). Courant Inst. of Mathematical Sciences. Dec 1993. 22p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-88ER25053. Order Number DE94005133. Source: OSTI; NTIS; GPO Dep.

This is the final report for the Courant Mathematics and Computing Laboratory (CMCL) research program for the years 1991–1993. Our research efforts encompass the formulation of physical problems in terms of mathematical models (both old and new), the mathematical analysis of such models, and their numerical resolution. This last step involves the development and implementation of efficient methods for large scale computation. Our analytic and numerical work often go hand in hand; new theoretical approaches often have numerical counterparts, while numerical experimentation often suggests avenues for analytical investigation.

7909 (DOE/ER/25100–2) **Research on primal-dual interior point algorithms for mathematical programming: Final technical report, August 1991–August 1993.** Zhang, Yin. Maryland Univ., Baltimore, MD (United States). Sep 1993. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-91ER25100. Order Number DE94003982. Source: OSTI; NTIS; GPO Dep.

Today interior-point methods of choice for general linear programming are primal-dual infeasible interior-point algorithms. There is a big gap between theoretical algorithms and practical algorithms. Major goals of the project were to narrow the gaps between theory and practice of primal-dual interior-point methods. The PI (principal investigator) played a leading role in joint work with Richard Tapia on constructing the first superlinear and polynomial primal-dual algorithm. PI's recent work on infeasible interior-point methods established the first polynomial result for today's interior-point methods of device. More recently, PI established polynomial complexities for Mehrotra-type predictor-corrector methods which have been widely regarded today as the most practically efficient methods. This work has laid a solid theoretical foundation for these methods.

7910 (DOE/ER/25118–1) **System Software and Tools for High Performance Computing Environments: A report on the findings of the Pasadena Workshop, April 14–16, 1992.** Sterling, T. (Universities Space Research Association, Washington, DC (United States)); Messina, P.; Chen, M. Jet Propulsion Lab., Pasadena, CA (United States). 1 Apr 1993. 223p. Contract AI02-92ER25118. (JPL-PUBL–93-15). Order Number DE94003918. Source: OSTI; NTIS; GPO Dep.

The Pasadena Workshop on System Software and Tools for High Performance Computing Environments was held at the Jet Propulsion Laboratory from April 14 through April 16, 1992. The workshop was sponsored by a number of Federal agencies committed to the advancement of high performance computing (HPC) both as a means to advance their respective missions and as a national resource to enhance American productivity and competitiveness. Over a hundred experts in related fields from industry, academia, and government were invited to participate in this effort to assess the current status of software technology in support of HPC systems. The overall objectives of the workshop were to understand the requirements and current limitations of HPC software technology and to contribute to a basis for establishing new directions in research and development for software technology in HPC environments. This report includes reports written by the participants of the workshop's seven working groups. Materials presented at the workshop are reproduced in appendices. Additional chapters summarize the findings and analyze their implications for future directions in HPC software technology development.

7911 (DOE/ER/25137–1) **Center for computation and visualization of geometric structures: [Annual], Progress report.** Minnesota Univ., Minneapolis, MN (United States). 12 Feb 1993. 28p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-92ER25137. Order Number DE94001882. Source: OSTI; NTIS; GPO Dep.

The mission of the Center is to establish a unified environment promoting research, education, and software and tool development. The work is centered on computing, interpreted in a broad sense to include the relevant theory, development of algorithms, and actual implementation. The research aspects of the Center are focused on geometry; correspondingly the computational aspects are focused on three (and higher) dimensional visualization. The educational aspects are likewise centered on computing and focused on geometry. A broader term than education is 'communication' which encompasses the challenge of explaining to the world current research in mathematics, and specifically geometry.

7912 (DOE/FTR–93018766) **Participation in the semi-annual meeting of Cray computing systems: Foreign trip report, April 20–27, 1991.** Ralph, W.D. Sandia National Labs., Albuquerque, NM (United States). 6 May 1991. 35p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-76DP00789. Order Number DE93018766. Source: OSTI; NTIS (US Sales Only); GPO Dep.

Since 1982, Cray supercomputers have been an important tool for the scientists working on the mission of Sandia National Laboratories. Security features of the operating system software supported by Cray Research, Inc., must meet the standards of Sandia National Labs and the Department of Energy in order to protect sensitive data from compromise. In adapting UNICOS to the Sandia environment, several problems were encountered with software released by Cray Research. One reason for attendance at this conference was to share experiences with other supercomputer users who may be undertaking simiiar efforts. Another reason was to provide Cray Research with feedback on effectiveness of their software to meet security standards of Sandia Labs. In addition, Cray's planned software evolution, particularly in networking and security, was a major topic of discussion of interest to Sandia Labs.

7913 (ECN-C–93-062) **Experience with the Common KADS WB.** Bogaard, D.D. Netherlands Energy Research Foundation (ECN), Petten (Netherlands). Oct 1993. 35p. Order Number DE94729856. Source: OSTI; NTIS; Available from the library of the Netherlands Energy Research Foundation (ECN), P.O. Box 1, 1755 ZG Petten (Netherlands).

A student's report.

The purpose of this report was for the author to get acquainted with the Common KADS methodology and to elaborate a knowledge model. The author evaluated in particular the Life Cycle Model (LCM) layer of the Common KADS workbench (WB) and wrote down all the bugs, encountered while working with KADS-WB. The elaboration of the knowledge model resulted in several task decompositions, inference structures, and a project that was introduced into the WB. In chapter Common KADS is introduced, based on existing literature. In chapter two the experiences of the author with the Life Cycle Model, which is part of the WB, are outlined. In chapter three the practical use of the WB is described. In section 3.1 a summary is given of an article by the author's supervisor J.R. Balder about experiences with KADS using reverse knowledge based systems engineering. Also Figaro, a system used by 'Electricite de France' for assessing the reliability of electricity generating systems, is discussed. Figaro is an existing system that has to be reverse engineered into a Common KADS set of models. Often used concepts in this process are task decompositions and inference structures, which will be presented in section 3.2. Section 3.3 is about the author's experiences with introducing these task decompositions into the WB. 25 figs., 1 appendix, 9 refs.

7914 (ESTSC–000597IBMPC02) **GWSCREEN2.02: Groundwater Screen.** Rood, A.S. (EG and G Idaho Inc., Idaho Falls, ID (United States)). EG and G Idaho, Inc., Idaho Falls, ID (United States). 1 Aug 1993. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. Source: ESTSC.

Description: IBM PC; MS DOS 5.0; FORTRAN77; 1 3.5 DISKETTE. The default input file name is GWSCREEN.PAR and the default output file name is GWSCREEN.OUT. The user may use any MS DOS legal file name (Maximum of 12 characters). In the sample problems, the following conventions were used. filename.PAR Input file that contains values to the GWSCREEN parameters and variables. filename.OUT Output file for the maximum concentration calculation and limiting soil of pond effluent concentration. filename.LST Output file for concentration verses time output.

GWSCREEN was developed for assessment of the groundwater pathway from leaching of radioactive and non radioactive substances from surface or buried sources and release to percolation ponds. The code calculates the limiting soil concentration or effluent release concentration such that, after leaching and transport to the aquifer, regulatory contaminant levels in groundwater are not exceeded. The code uses a masss conservation approach to model three processes: Contaminant release from a source volume, contaminant transport in the unsaturated zone, and contaminant transport in the saturated zone. The source model considers the sorptive properties and solubility of the contaminant. Transport in the unsaturated zone is described by a plug flow model. Transport in the saturated zone is calculated with a semi-analytical solution to the advection dispersion equation in groundwater. Concentration as a function of time at a user specified receptor point and maximum concentration averaged over the exposure interval are also calculated. In addition, the code calculates transport and impacts of radioactive progeny. Input to GWSCREEN is through one, free format ASCII file. This code was designed for assessment and screening of the groundwater pathway when field data is limited. It was not intended to be a predictive tool.

7915 (ESTSC–000635IBMPC00) **LPDSERVICES: An RFC 1179 Compatible Remote Print Server for Windows 3.1.** Brooks, D.L. (EG and G Idaho Inc., Idaho Falls, ID (United States)). EG and G Idaho, Inc., Idaho Falls, ID (United States). 15 Mar 1993. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. Source: ESTSC.

Description: IBM PC; MICROSOFT OR IBM DOS THAT SUPPORMICROSOFT C/C++ VERSION 7.0; 1 3.5 DISKETTE. The print manager and spooler use the directory 'spool nlpd' for storage of files. The print manager uses the file 'seqno' to store a unique sequence number. The print manager and spooler use the file 'translat' to associate remote filenames with local DOS filenames. Files that start with 'CF*' are control files. They are transmitted as part of the protocol, and written by the print manager. The spooler reads the control file, uses information in it to print data files, and then deletes the control file. Files that start with 'DF*' are data files. They are also transmitted as part of the protocol, and written by the print manager. These files are identified in the control file. The spooler prints the data file then deletes it.

Internet RFC 1179 describes the protocol to be used for printing files on a remote printer in a TCP/IP network. The protocol is client/server, meaning that the client initiates the print request, and

the server recieves the request and performs the actual printing locally. This protocol has been in long use on Unix systems derived from the Berkeley Software Distribution, such as DEC's Ultrix and Sun's SunOS. LPD Services implements the server portion of this protocol. It handles both the network communication and conformance with the protocol, and printing using the Microsoft Windows device independent printing interface.

7916 (ESTSC–000644AL00000) **DELTAE: Design Environment for Low-Amplitude Thermoacoustic Engines.** Ward, W.C (Los Alamos National Lab., NM (United States)); Swift, G.W. Los Alamos National Lab., NM (United States). 1 Nov 1993. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Source: ESTSC.

Description: APPLE MACINTOSH; Off the Shelf; FORTRAN IV; 1 3.5 Diskette.

In thermoacoustic engines and refrigerators, and in many simple acoustic systems, a one dimensional wave equation determines the spatial dependence of the acoustic pressure and velocity. DELTAE numerically integrates such wave equations in the acoustic approximation, in gases or liquids, in user-defined geometries. Boundary conditions can include conventional acoustic boundary conditions of geometry and impedance, as well as temperature and thermal power in thermoacoustic systems. DELTAE can be used easily for apparatus ranging from simple duct networks and resonators to thermoacoustic engines refrigerators and combinations thereof. It can predict how a given apparatus will perform, or can allow the user to design an apparatus to achieve desired performance. DELTAE views systems as a series of segments; twenty segment types are supported. The purely acoustic segments include ducts and cones, and lumped impedances including compliances, series impedances, and endcaps. Electroacoustics tranducer segments can be defined using either frequency-independent coefficients or the conventional parameters of loudspeaker-style drivers: mass, spring constant, magnetic field strength, etc. Tranducers can be current driven, voltage driven, or connected to an electrical load impedance. Thermoacoustic segment geometries include parallel plates, circular and rectangular pores, and pin arrays. Side branches can be defined with fixed impedances, frequency-dependent radiation impedances, or as an auxiliary series of segments of any types. The user can select working fluids from among air, helium, neon, argon, hydrogen, deuterium, carbon dioxide, nitrogen, helium-argon mixtures, helium-xenon mixtures, liquid sodium, and eutectic sodium-potassium. Additional fluids and solids can be defined by the user.

7917 (ESTSC/NRC/R–000098C017600) **BFR: Common Cause Failure Data Analysis.** Atwood, C.L. (EG and G Idaho Inc., Idaho Falls, ID (United States)). EG and G Idaho, Inc., Idaho Falls, ID (United States). 1 Feb 1983. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). Office of Nuclear Regulatory Research. (NESC–9864). Source: ESTSC.

Description: CDC CYBER176; NOS/BE 1.4; FORTRAN IV (95%) and COMPASS (5%); 1 Mag Tape.

BFR uses the binomial failure rate model to estimate the rate of simultaneous failures of similar components. Data consists of recorded single and multiple failures. Either Bayesian or non-Bayesian methods can be employed to find point estimates and interval estimates of the quantities of interest, including the rate at which a specific set of k components fails simultaneously, and the rate at which at least k out of m components fail simultaneously. These rates can be used directly in fault trees, or for calculating probabilities. BFR makes use of subroutines from the proprietary IMSL library; plots, used only for Bayesian regions when the causes of single failures are not identifiable, are produced by the proprietary DISSPLA graphics package. These routines are not included. Typical run time is 80 CP seconds; however, the time varies greatly, depending on the complexity of the data, and about twice as much time is required if the compiler OPT=0, rather than OPT=2 option, is used. An auxiliary program, PTEST, used to check the goodness of fit between the model and data following BFR execution, is included.

7918 (ESTSC/NRC/R–000316IBMPC00) **PHAZE: Parametric Hazard Function Estimation.** Atwood, C.L. (EG and G Idaho Inc., Idaho Falls (United States)). EG and G Idaho, Inc., Idaho Falls, ID (United States). 1 Jul 1990. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). Office of Nuclear Regulatory Research. (NESC–1147). Source: ESTSC.

Description: IBM PC; DOS 3.0 or higher; FORTRAN 77; 1 3.5 Diskette. PHAZE should be portable to other computers by changing the machine-dependent constants in the BLOCK DATA subroutine in the FROZEN1.FOR file.

Phaze performs statistical inference calculations on a hazard function (also called a failure rate or intensity function) based on reported failure times of components that are repaired and restored to service. Three parametric models are allowed: the exponential, linear, and Weibull hazard models. The inference includes estimation (maximum likelihood estimators and confidence regions) of the parameters and of the hazard function itself, testing of hypotheses such as increasing failure rate, and checking of the model assumptions.

7919 (ESTSC/NRC/R–000322I037000) **NUTRAN: Long-Term Repository Safety Analysis.** Koplik, C.M. (Analytic Sciences Corp., Reading, MA (United States)); Nalbandian, J.Y.; Scott, J.I. Analytic Sciences Corp., Reading, MA (United States). 1 Jun 1983. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). Office of Nuclear Material Safety and Safeguards. (NESC–9888). Source: ESTSC.

Description: IBM370; OS/VS1 (IBM370), MVS/XA (IBM3070FORTRAN IV (50%) and PL/I (50%); 1 Mag Tape. Well concentration calculations require the use of the proprietary IMSL mathematical subroutine library, and plot output is produced using the proprietary ISSCO graphics software, DISSPLA. Neither of these software packages is supplied. Alternatives to the IMSL routines EIGRF, LINV2F, AND MMBSKO are included for those users without acess to the IMSL library.

NUTRAN is a system of four computer programs for calculating the dose to humans from radionuclides carried out of deep geologic nuclear waste repositories by ground water. NUTRAN is composed of the FORTRAN programs ORIGEN1 and BIODOSE and the PL/I programs WASTE and PLOT. ORIGEN1, developed by Oak Ridge National Laboratory, generates an inventory of radionuclides as a function of time; BIODOSE computes the doses to humans which result from any releases of radioactivity into the biosphere. WASTE models the release of radionuclides from a repository and their transport in the subsurface, and PLOT combines the results of BIODOSE and WASTE dose per MWe-yr released and releases in units of MWe-yr of waste to obtain doses and generate dose plots. The ORIGEN1 program developed by ORNL is not included. The NUTRAN model incorporates the following features: refilling of the repository cavity with water; leaching of the waste matrix; dissolution of the radioactive elements in the waste; transport of waste by ground water through the repository, surrounding strata, and adjacent aquifers; withdrawal of contaminated ground water through wells; transport of waste in surface waters and associated ecosystems; and human exposure and dose mechanisms.

7920 (ESTSC/NRC/R–000372IBMPC00) **LAS CRUCES DATABASE: Las Cruces Trench Site Database, Vadose Model.** Hills, R. (New Mexico State University, Las Cruces, NM (United States)); Wirenga, P.J. New Mexico State Univ., Las Cruces, NM (United States). 1 Sep 1990. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). Office of Nuclear Regulatory Research. (NESC–1140). Source: ESTSC.

Description: IBM PC; Machine Dependent; FORTRAN; 2 5.25 Diskettes. The IREADME.TXT file contains documentation describing the contents and format of the database files.

The LAS CRUCES TRENCH SITE DATABASE includes raw and processed experimental data obtained from the vadose zone model validation experiments performed on the New Mexico State Ranch northeast of Las Cruces, New Mexico. Included are data characterizing the unsaturated hydraulic properties for the experimental site and dynamic data, such as water contents, tensions, and solute concentrations, obtained during two infiltration redistribution experiments. At the site, a 26.4m long, 4.5m wide, and 5 mile deep trench was constructed in undisturbed soil. During construction a total of 594 disturbed soil samples and 594 associated soil cores were taken from 9 distinct soil layers identified on the north wall. Samples were also taken from three vertical transects on this wall.

Data included in the database are sample locations, a description of the 9 soil layers, bore hole saturated hydraulic conductivities and outflow data, laboratory saturated hydraulic conductivities, soil water retention data, particle size distribution data, bulk density data, parameters used to fit the van Genuchten equation to the water retention data, and estimated van Genuchten parameters for each layer and the entire site. Data obtained from two experiments designed to provide data for testing deterministic and stochastic models of vadose zone flow and transport are also included.

7921 (INIS-mf–13741) **Computer automation and artificial intelligence.** Husnain, S.B. Pakistan Inst. of Nuclear Science and Technology, Islamabad (Pakistan). 1992. 12p. (CONF-9204276–: Seminar on research and development in support of technology with military applications, Karachi (Pakistan), 29 Apr 1992). Order Number DE94611058. Source: OSTI; NTIS (US Sales Only); INIS.

Rapid advances in computing, resulting from micro chip revolution has increased its application manifold particularly for computer automation. Yet the level of automation available, has limited its application to more complex and dynamic systems which require an intelligent computer control. In this paper a review of Artificial intelligence techniques used to augment automation is presented. The current sequential processing approach usually adopted in artificial intelligence has succeeded in emulating the symbolic processing part of intelligence, but the processing power required to get more elusive aspects of intelligence leads towards parallel processing. An overview of parallel processing with emphasis on transputer is also provided. A Fuzzy knowledge based controller for amination drug delivery in muscle relaxant anesthesia on transputer is described. 4 figs. (author).

7922 (IS-T–1673) **Performance analysis of memory hierachies in high performance systems.** Yogesh, A. Ames Lab., IA (United States). Jul 1993. 53p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-82. Order Number DE94005549. Source: OSTI; NTIS; GPO Dep.

This thesis studies memory bandwidth as a performance predictor of programs. The focus of this work is on computationally intensive programs. These programs are the most likely to access large amounts of data, stressing the memory system. Computationally intensive programs are also likely to use highly optimizing compilers to produce the fastest executables possible. Methods to reduce the amount of data traffic by increasing the average number of references to each item while it resides in the cache are explored. Increasing the average number of references to each cache item reduces the number of memory requests. Chapter 2 describes the DLX architecture. This is the architecture on which all the experiments were performed. Chapter 3 studies memory moves as a performance predictor for a group of application programs. Chapter 4 introduces a model to study the performance of programs in the presence of memory hierarchies. Chapter 5 explores some compiler optimizations that can help increase the references to each item while it resides in the cache.

7923 (JINR-R–11-92-409) **Goodness-of-fit criteria based on test statistics $\omega_n^3 = n^{3/2} \int_{-\infty}^{\infty} [S_n(x) - F(x)]^3 dF(x)$: Investigation of power of one-sided criterion for large n.** Zrelov, P.V.; Ivanov, V.V. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Computing Techniques and Automation. 1992. 22p. (In Russian). Order Number DE94611059. Source: OSTI; NTIS (US Sales Only); INIS.

The main properties of new integral nonparametric goodness-of-fit criterion ω_n^3 for large emperical samples sizes are considered. Its comparison with familiar ω_n^2 criterion and with Watson's criterion U-bar (connected with another integral criterion ω_n^1) in frames of Chapman's approach for n=50, 200 and 1000 was performed. For alternative hypotheses, minimizing the power, an advantage of the ω_n^3 in a sufficient broad range of significance level a and, what is specially important for practical applications, for small values was shown. It was also shown that for hypotheses, maximizing the power, the Watson's criterion has a slight advantage over ω_n^3 criterion. The analytical expressions allowing to evaluate the power of ω_n^3 criterion for arbitrary one-sided alternative hypotheses are presented. 9 refs.; 5 figs.

7924 (KAERI/AR–370/93) **Review of activities for evaluating basic nuclear data.** Min, Byung Joo (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)). Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of). May 1993. 58p. (In Korean). Order Number DE94611060. Source: OSTI; NTIS (US Sales Only); INIS.

For the development of an advanced reactor and associated as well as the management of radwastes, new basic nuclear data in the area of emitting high energy are required. Since these basic elements are used for the correct calculation of nuclear system applications, a research for the nuclear data evaluation should be accomplished. Advanced industrialised countries have been invested in manpower and financial constraints for long time, and they have developed and used the basic nuclear data. We are still relying on other countries for evaluated nuclear data. Only an activity for evaluated nuclear data compilation has been carried out for the last 10 years. Since a lot of qualified manpower are required for nuclear data evaluation, the collaboration with advanced countries will be needed. (Author).

7925 (KAERI/TR–277/92) **The development of a statistical report software for computer system usages.** Lee, Young Jai (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Lee, Hae Cho; Park, Jeong Seok; Sohn, Jae Min; Park, Bong Sik; Park, Sun Hee; Hwang, In Ah; Park, Soo Jin. Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of). Jun 1992. 172p. (In Korean). Order Number DE94611061. Source: OSTI; NTIS (US Sales Only); INIS.

In this report, we describe the data base system developed for various statistical analysis of KAERI computer system usages. In keeping abreast with the rapid growth of information society, many devices for handling information are developed and purchased. At KAERI's computer operation facility, several information processing devices have been installed and are under operation now. It has been found very difficult to draw up a long term plan for computer operation management due to the lack of accumulated operation history data. Combined charge information is generated and transferred to the VAX 6320 system. The data base system on the VAX 6320 was implemented using the ORACLE RDBMS software. The computing services history data was all processed and collected into the data base for the fiscal years 1990 and 1991. It is expected that this data base will be used in many convenient ways in the future. (Author).

7926 (KAERI/TR–278/92) **An analysis of file system and installation of the file management system for NOS operating system.** Lee, Young Jai (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Park, Sun Hee; Hwang, In Ah; Kim, Hee Kyung. Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of). Jun 1992. 65p. (In Korean). Order Number DE94611062. Source: OSTI; NTIS (US Sales Only); INIS.

In this technical report, we analyze NOS file structure for Cyber 170-875 and Cyber 960-31 computer system. We also describe functions, procedure and how-to-operate and how-to-use of VDS. VDS is used to manage large files effectively for Cyber computer system. The purpose of the VDS installation is to increase the virtual disk storage by utilizing magnetic tape, to assist the users of the computer system in managing their files, and to enhance the performance of KAERI Cyber computer system. (Author).

7927 (KAERI/TR–353/93) **ONED90: 1-dimensional diffusion code.** Zee, Sung Kyun (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Chang, Jong Hwa; Kim, Si Yong; Lee, Sang Hoon; Lee, Ki Bog; Noh, Jae Man. Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of). Jun 1993. 109p. (In Korean). Order Number DE94611063. Source: OSTI; NTIS (US Sales Only); INIS.

The validity of ONED90(1-Dimensional 2-Group Diffusion Code) for nuclear design and plant reactor simulation has been confirmed through comparisons of some calculational results from ONED90 with current design values and measured data. Main methology of ONED90 including user's manual has been described in detail. (Author).

7928 (LA-UR–92-1507) **Compression of fingerprint data using the wavelet vector quantization image compression algorithm: 1992 progress report.** Bradley, J.N.; Brislawn, C.M. Los Alamos National Lab., NM (United States). 11 Apr 1992. 33p. Sponsored by Department of the Treasury, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE94004996. Source: OSTI; NTIS; GPO Dep.

This report describes the development of a Wavelet Vector Quantization (WVQ) image compression algorithm for fingerprint raster files. The pertinent work was performed at Los Alamos National Laboratory for the Federal Bureau of Investigation. This document describes a previously-sent package of C-language source code, referred to as LAFPC, that performs the WVQ fingerprint compression and decompression tasks. The particulars of the WVQ algorithm and the associated design procedure are detailed elsewhere; the purpose of this document is to report the results of the design algorithm for the fingerprint application and to delineate the implementation issues that are incorporated in LAFPC. Special attention is paid to the computation of the wavelet transform, the fast search algorithm used for the VQ encoding, and the entropy coding procedure used in the transmission of the source symbols.

7929 (LA-UR–93-3461) **Is probability of frequency too narrow?.** Martz, H.F. Los Alamos National Lab., NM (United States). [1993]. 9p. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-940312–12: 2. Probabilistic safety assessment and management conference (PSAM), San Diego, CA (United States), 20-24 Mar 1994). Order Number DE94000687. Source: OSTI; NTIS; INIS; GPO Dep.

Modern methods of statistical data analysis, such as empirical and hierarchical Bayesian methods, should find increasing use in future Probabilistic Risk Assessment (PRA) applications. In addition, there will be a more formalized use of expert judgment in future PRAs. These methods require an extension of the probabilistic framework of PRA, in particular, the popular notion of probability of frequency, to consideration of frequency of frequency, frequency of probability, and probability of probability. The genesis, interpretation, and examples of these three extended notions are discussed.

7930 (LA-UR–93-3914) **A survey of open problems in symplectic integration.** McLachlan, R.I. (Univ. of Colorado, Boulder, CO (United States)); Scovel, C. Los Alamos National Lab., NM (United States). 15 Oct 1993. 27p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9310235–1: Integration algorithms for classical mechanics, Ontario (Canada), 14-27 Oct 1993). Order Number DE94003966. Source: OSTI; NTIS; GPO Dep.

In the past few years there has been a substantial amount of research on symplectic integration. The subject is only part of a program concerned with numerically preserving a system's inherent geometrical structures. Volume preservation, reversibility, local conservation laws for elliptic equations, and systems with integral invariants are but a few examples of such invariant structures. In many cases one requires a numerical method to stay in the smallest possible appropriate group of phase space maps. It is not the authors' opinion that symplecticity, for example, automatically makes a numerical method superior to all others, but it is their opinion that it should be taken seriously and that a conscious, informed decision be made in that regard. The authors present here a survey of open problems in symplectic integration, including other problems from the larger program. This is not intended as a review of symplectic integration and is naturally derived from the authors' own research interests. At present, this survey is incomplete, but the authors hope the help of the colleagues to be able to include in the proceedings of this conference a more comprehensive survey. Many of the problems mentioned here call for numerical experimentation, some for application of suggested but untested methods, some for new methods, and some for theorems, Some envisage large research programs.

7931 (LA-UR–93-4102) **Adaptive optimization and control using neural networks.** Mead, W.C.; Brown, S.K.; Jones, R.D.; Bowling, P.S.; Barnes, C.W. Los Alamos National Lab., NM (United States). 22 Oct 1993. 18p. Sponsored by USDOE, Washington, DC (United States);Department of Defense, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-931023–9: International conference on accelerator and large experimental control systems, Berlin (Germany), 18-22 Oct 1993). Order Number DE94003941. Source: OSTI; NTIS; GPO Dep.

Recent work has demonstrated the ability of neural-network-based controllers to optimize and control machines with complex, non-linear, relatively unknown control spaces. We present a brief overview of neural networks via a taxonomy illustrating some capabilities of different kinds of neural networks. We present some successful control examples, particularly the optimization and control of a small-angle negative ion source.

7932 (LA-UR–93-4251) **Estimators for the Cauchy distribution.** Hanson, K.M.; Wolf, D.R. Los Alamos National Lab., NM (United States). [1993]. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9308205–1: 13. MAXENT workshop, Santa Barbara, CA (United States), 1-3 Aug 1993). Order Number DE94004990. Source: OSTI; NTIS; GPO Dep.

We discuss the properties of various estimators of the central position of the Cauchy distribution. The performance of these estimators is evaluated for a set of simulated experiments. Estimators based on the maximum and mean of the posterior probability density function are empirically found to be well behaved when more than two measurements are available. On the contrary, because of the infinite variance of the Cauchy distribution, the average of the measured positions is an extremely poor estimator of the location of the source. However, the median of the measured positions is well behaved. The rms errors for the various estimators are compared to the Fisher-Cramer-Rao lower bound. We find that the square root of the variance of the posterior density function is predictive of the rms error in the mean posterior estimator.

7933 (LBL–33808) **Analytic rendering of curvilinear volume data.** Bethel, W. Lawrence Berkeley Lab., CA (United States). Mar 1993. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE94004934. Source: OSTI; NTIS; GPO Dep.

A technique is presented for analytically rendering volume data from curvilinear grids. The method employs analytic techniques for manipulating and rendering curvilinear voxels. A curvilinear voxel is represented using a cubic triparametric solid formulation. The control points defining the cubic triparametric voxel are computed from the original curvilinear grid using the Catmull-Rom formulation, and subsequently rendered using a three-dimensional forward difference operator. The primary benefit from using such a representation is the fact the voxel shape and data values are C1-continuous across voxel boundaries. The issue of voxel opacity, both at the sub-voxel and super-voxel levels, is investigated. The use of both tricubic representation and rendering, along with the new approach to managing voxel opacity, results in images which are markedly different from those presented in previous work.

7934 (LBL–34819) **Interface Configuration Experiment: Preliminary results.** Concus, P. (Lawrence Berkeley Lab., CA (United States)); Finn, R.; Weislogel, M. Lawrence Berkeley Lab., CA (United States). Sep 1993. 16p. Sponsored by USDOE, Washington, DC (United States);National Aeronautics and Space Administration, Washington, DC (United States);National Science Foundation, Washington, DC (United States). DOE Contract AC03-76SF00098. GRANT NAG3-1143; GRANT DMS89-02831. (CONF-9309279–1: Joint L+1 science review for USML-1 and USMP-1, Huntsville, AL (United States), 22-24 Sep 1993). Order Number DE94003413. Source: OSTI; NTIS; GPO Dep.

The Interface Configuration Experiment (ICE) was carried out on USML-1 to investigate liquid-gas interfaces in certain rotationally-symmetric containers having prescribed, mathematically derived shapes. These containers have the property that they admit an entire continuum of distinct equilibrium rotationally-symmetric interfaces for a given liquid volume and contact angle. Furthermore, it can be shown that none of these interfaces can be stable. It was found, after the containers were filled in orbit, that an initial equilibrium interface from the symmetric continuum reoriented, when perturbed, to a stable interface that was not rotationally symmetric, in accordance with the mathematical theory.

7935 (ORNL/TM–12440) **Cryptosystems based on chaotic dynamics.** McNees, R.A.; Protopopescu, V.; Santoro, R.T.; Tolliver, J.S. Oak Ridge National Lab., TN (United States). Aug 1993. 17p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE94004256. Source: OSTI; NTIS; GPO Dep.

An encryption scheme based on chaotic dynamics is presented. This scheme makes use of the efficient and reproducible generation of cryptographically secure pseudo random numbers from chaotic maps. The result is a system which encrypts quickly and possesses a large keyspace, even in small precision implementations. This system offers an excellent solution to several problems including the dissemination of key material, over the air rekeying, and other situations requiring the secure management of information.

7936 (PNL-SA–21769) **High performance computing in chemistry and massively parallel computers: A simple transition?.** Kendall, R.A. Pacific Northwest Lab., Richland, WA (United States). Mar 1993. 22p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9303248–1: 1993 Sanible symposia, St. Augustine, FL (United States), 15-19 Mar 1993). Order Number DE94004318. Source: OSTI; NTIS; GPO Dep.

A review of the various problems facing any software developer targeting massively parallel processing (MPP) systems is presented. Issues specific to computational chemistry application software will be also outlined. Computational chemistry software ported to and designed for the Intel Touchstone Delta Supercomputer will be discussed. Recommendations for future directions will also be made.

7937 (PNL-SA–22009) **Emerging human-computer interface (HCI) design guidelines for graphical user interface (GUI).** Bowser, S.E.; Adams, S.M. Pacific Northwest Lab., Richland, WA (United States). Oct 1993. 8p. Sponsored by Department of Defense, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9310100–7: Human Factors and Ergonomics Society meeting, Seattle, WA (United States), 11-15 Oct 1993). Order Number DE94004293. Source: OSTI; NTIS; GPO Dep.

The requirement to establish baseline style references for Graphical User Interfaces (GUIs) is recognized. The ability to obtain consensus among user communities has been limited to nonexistent. The authors are part of a team that has developed a generic baseline human-computer interface (HCI) style guide for the U.S. Department of Defense (DoD). The DoD HCI Style Guide has its origin in a style guide developed by the intelligence community and in human factors design guidelines developed for Army tactical command and control systems. The DoD HCI Style Guide is intended to be a baseline style reference for the design of HCIs within DoD. The needs of specific user communities have been addressed by including addenda that expand on the baseline and address focus areas of interest. The conclusion is that an overall or general style guide should be adopted for GUIs with allowance for specialized user group requirements and additions. The anticipated results would be higher productivity and reduced training and development time.

7938 (PNL-SA–22915) **Frequency-domain transfer-function identification using Chebyshev polynomials.** Johnson, J.M.; Trudnowski, D.J. Pacific Northwest Lab., Richland, WA (United States). Dec 1993. 3p. Sponsored by USDOE, Washington, DC (United States);Northwest Organization for College and University Science (United States). DOE Contract AC06-76RL01830 ; FG06-89ER75522. (CONF-931233–3: 32. Institute of Electrical and Electronic Engineers (IEEE) conference on decision and control, San Antonio, TX (United States), Dec 1993). Order Number DE94004777. Source: OSTI; NTIS; GPO Dep.

An approach is proposed for identifying a linear single-input single-output model from the frequency response of a system with unknown order. The approach involves representing the transfer function as the ratio of linearly-combined Chebyshev polynomials and solving an over-determined linear equation set. The method is compared with two other previously proposed techniques and shown to perform very well under noisy data conditions.

7939 (PNL-SA–23116) **Software redesign for usability: A case study.** Sanchez, J.A.; Adickes, M.D. Pacific Northwest Lab., Richland, WA (United States). Oct 1993. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9310100–4: Human Factors and Ergonomics Society meeting, Seattle, WA (United States), 11-15 Oct 1993). Order Number DE94003704. Source: OSTI; NTIS; GPO Dep.

In an ideal software development environment, the use of a programming language such as C allows developers the ability to create an application that matches the requirements and needs of a client. Recent breakthroughs and advances in software design and graphical user interfaces, however, make it much more difficult to justify, from either a cost or time perspective, developing an application completely from scratch using such a language. By using commercial development packages (prototyping development tools), developers are freed from many of the time consuming tasks that would ordinarily be involved in creating an application, and are able instead to concentrate on what should be the two most important areas of an application, what it should do and how it should look. This poster session illustrates the significant benefits that can be achieved by creating an application using a commercial data base package with a graphical user interface developer along with a multidisciplinary team of developers. The primary emphasis of the display focuses on the ability of the developer to incorporate human factors considerations to ensure that the program is both easy to use and easy to change, given additional client inputs and requests.

7940 (SAND–93-0871) **Modeling data throughput on communication networks.** Eldridge, J.M. Sandia National Labs., Albuquerque, NM (United States). Nov 1993. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. Order Number DE94005077. Source: OSTI; NTIS; GPO Dep.

New challenges in high performance computing and communications are driving the need for fast, geographically distributed networks. Applications such as modeling physical phenomena, interactive visualization, large data set transfers, and distributed supercomputing require high performance networking [St89][Ra92][Ca92]. One measure of a communication network's performance is the time it takes to complete a task – such as transferring a data file or displaying a graphics image on a remote monitor. Throughput, defined as the ratio of the number of useful data bits transmitted per the time required to transmit those bits, is a useful gauge of how well a communication system meets this performance measure. This paper develops and describes an analytical model of throughput. The model is a tool network designers can use to predict network throughput. It also provides insight into those parts of the network that act as a performance bottleneck.

7941 (SAND–93-2171C) **PUMA: An operating system for massively parallel systems.** Wheat, S.R. (Sandia National Labs., Albuquerque, NM (United States)); Riesen, R.; Maccabe, A.B.; van Dresser, D.W.; Stallcup, T.M. Sandia National Labs., Albuquerque, NM (United States). [1993]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-940136–1: 27. Hawaii international conference on system sciences, Maui, HI (United States), 4-7 Jan 1994). Order Number DE94001597. Source: OSTI; NTIS; GPO Dep.

This paper presents an overview of PUMA, (Performance-oriented, User-managed Messaging Architecture), a message passing kernel. Message passing in PUMA is based on portals-an opening in the address space of an application process. Once an application process has established a portal, other processes can write values into the portal using a simple send operation. Because messages are written directly into the address space of the receiving process, there is no need to buffer messages in the PUMA kernel and later copy them into the applications address space. PUMA consists of two components: The quintessential kernel (Q-Kernel) and the process control thread (PCT) While the PCT provides management decisions, the Q-Kernel controls access and implements the policies specified by the PCT.

7942 (SAND–93-2419C) **Multiple weight stepwise regression.** Atkins, J. (California Univ., Berkeley, CA (United States).

Dept. of Statistics); Campbell, J. Sandia National Labs., Albuquerque, NM (United States). [1993]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-940312–29: 2. Probabilistic safety assessment and management conference (PSAM), San Diego, CA (United States), 20-24 Mar 1994). Order Number DE94001602. Source: OSTI; NTIS; GPO Dep.

In many science and engineering applications, there is an interest in predicting the outputs of a process for given levels of inputs. In order to develop a model, one could run the process (or a simulation of the process) at a number of points (a point would be one run at one set of possible input values) and observe the values of the outputs at those points. There observations can be used to predict the values of the outputs for other values of the inputs. Since the outputs are a function of the inputs, we can generate a surface in the space of possible inputs and outputs. This surface is called a response surface. In some cases, collecting data needed to generate a response surface can e very expensive. Thus, in these cases, there is a powerful incentive to minimize the sample size while building better response surfaces. One such case is the semiconductor equipment manufacturing industry. Semiconductor manufacturing equipment is complex and expensive. Depending upon the type of equipment, the number of control parameters may range from 10 to 30 with perhaps 5 to 10 being important. Since a single run can cost hundreds or thousands of dollars, it is very important to have efficient methods for building response surfaces. A current approach to this problem is to do the experiment in two stages. First, a traditional design (such as fractional factorial) is used to screen variables. After deciding which variables are significant, additional runs of the experiment are conducted. The original runs and the new runs are used to build a model with the significant variables. However, the original (screening) runs are not as helpful for building the model as some other points might have been. This paper presents a point selection scheme that is more efficient than traditional designs.

7943 (SAND–93-2420C) **Identification of components to optimize improvement in system reliability.** Painton, L. (Carnegie-Mellon Univ., Pittsburgh, PA (United States). Dept. of Engineering and Public Policy); Campbell, J. Sandia National Labs., Albuquerque, NM (United States). [1993]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-940312–22: 2. Probabilistic safety assessment and management conference (PSAM), San Diego, CA (United States), 20-24 Mar 1994). Order Number DE94001601. Source: OSTI; NTIS; GPO Dep.

The fields of reliability analysis and risk assessment have grown dramatically since the 1970s. There are now bodies of literature and standard practices which cover quantitative aspects of system analysis such as failure rate and repair models, fault and event tree generation, minimal cut sets, classical and Bayesian analysis of reliability, component and system testing techniques, decomposition methods, etc. In spite of the growth in the sophistication of reliability models, however, little has been done to integrate optimization models within a reliability analysis framework. That is, often reliability models focus on characterization of system structure in terms of topology and failure/availability characteristics of components. A number of approaches have been proposed to help identify the components of a system that have the largest influence on overall system reliability. While this may help rank order the components, it does not necessarily help a system design team identify which components they should improve to optimize overall reliability (it may be cheaper and more effective to focus on improving two or three components of smaller importance than one component of larger importance). In this paper, we present an optimization model that identifies the components to be improved to maximize the increase in system MTBF, subject to a fixed budget constraint. A dual formulation of the model is to minimize cost, subject to achieving a certain level of system reliability.

7944 (SAND–93-2595C) **Out of core, out of mind: Practical parallel I/O.** Womble, D.E.; Greenberg, D.S.; Riesen, R.E.; Wheat, S.R. Sandia National Labs., Albuquerque, NM (United States). [1993]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-9310220–2: Institute of Electrical and Electronic Engineers (IEEE) meeting on scalable parallel libraries, Starkville, MS (United States), 6-8 Oct 1993). Order Number DE94003107. Source: OSTI; NTIS; GPO Dep.

Parallel computers are becoming more powerful and more complex in response to the demand for computing power by scientists and engineers. Inevitably, new and more complex I/O systems will be developed for these systems. In particular we believe that the I/O system must provide the programmer with the ability to explcitly manage storage (despite the trend toward complex parallel file systems and caching schemes). One method of doing so is to have a partitioned secondary storage in which each processor owns a logical disk. Along with operating system enhancements which allow overheads such as buffer copying to be avoided and libraries to support optimal remapping of data, this sort of I/O system meets the needs of high performance computing.

7945 (SAND–93-2596C) **Communication on the Paragon.** Greenberg, D.; Maccabe, B.; McCurley, K.S.; Riesen, R.; Wheat, S. Sandia National Labs., Albuquerque, NM (United States). 15 Oct 1993. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-9310232–2: Intel Super Computer Users Group meeting, St. Louis, MO (United States), 4 Oct 1993). Order Number DE94003103. Source: OSTI; NTIS; GPO Dep.

In this note the authors describe the results of some tests of the message-passing performance of the Intel Paragon. These tests have been carried out under both the Intel-supplied OSF/1 operating system with an NX library, and also under an operating system called SUNMOS (Sandia UNM Operating System). For comparison with the previous generation of Intel machines, they have also included the results on the Intel Touchstone Delta. The source code used for these tests is identical for all systems. As a result of these tests, the authors can conclude that SUNMOS demonstrates that the Intel Paragon hardware is capable of very high bandwidth communication, and that the message coprocessor on Paragon nodes can be used to give quite respectable latencies. Further tuning can be expected to yield even better performance.

7946 (SAND–93-2597C) **Achieving high performance on the Intel Paragon.** Greenberg, D.S.; Maccabe, B.; Riesen, R.; Wheat, S.; Womble, D. Sandia National Labs., Albuquerque, NM (United States). [1993]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-9310232–1: Intel Super Computer Users Group meeting, St. Louis, MO (United States), 4 Oct 1993). Order Number DE94003108. Source: OSTI; NTIS; GPO Dep.

When presented with a new supercomputer most users will first ask "How much faster will my applications run?" and then add a fearful "How much effort will it take me to convert to the new machine?" This paper describes some lessons learned at Sandia while asking these questions about the new 1800+ node Intel Paragon. The authors conclude that the operating system is crucial to both achieving high performance and allowing easy conversion from previous parallel implementations to a new machine. Using the Sandia/UNM Operating System (SUNMOS) they were able to port a LU factorization of dense matrices from the nCUBE2 to the Paragon and achieve 92% scaled speed-up on 1024 nodes. Thus on a 44,000 by 44,000 matrix which had required over 10 hours on the previous machine, they completed in less than 1/2 hour at a rate of over 40 GFLOPS. Two keys to achieving such high performance were the small size of SUNMOS (less than 256 kbytes) and the ability to send large messages with very low overhead.

7947 (SAND–93-3807) **Sandia's research network for Supercomputing '93: A demonstration of advanced technologies for building high-performance networks.** Gossage, S.A.; Vahle, M.O. Sandia National Labs., Albuquerque, NM (United States). Dec 1993. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. Order Number DE94005319. Source: OSTI; NTIS; GPO Dep.

Supercomputing '93, a high-performance computing and communications conference, was held November 15th through 19th, 1993 in Portland, Oregon. For the past two years, Sandia National Laboratories has used this conference to showcase and focus its

communications and networking endeavors. At the 1993 conference, the results of Sandia's efforts in exploring and utilizing Asynchronous Transfer Mode (ATM) and Synchronous Optical Network (SONET) technologies were vividly demonstrated by building and operating three distinct networks. The networks encompassed a Switched Multimegabit Data Service (SMDS) network running at 44.736 megabits per second, an ATM network running on a SONET circuit at the Optical Carrier (OC) rate of 155.52 megabits per second, and a High Performance Parallel Interface (HIPPI) network running over a 622.08 megabits per second SONET circuit. The SMDS and ATM networks extended from Albuquerque, New Mexico to the showroom floor, while the HIPPI/SONET network extended from Beaverton, Oregon to the showroom floor. This paper documents and describes these networks.

7948 (SRT-ATS–930104) **Scientific Computations section monthly report September 1993.** Buckner, M.R. Westinghouse Savannah River Co., Aiken, SC (United States). 1 Nov 1993. 23p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE94004944. Source: OSTI; NTIS; GPO Dep.

This progress report is computational work that is being performed in the areas of thermal analysis, applied statistics, applied physics, and thermal hydraulics.

7949 (UCRL-ID–115099-Rev.1) **Livermore Computing Production Control System, 3.0: Product description: Revision 1.** Wood, R.R. Lawrence Livermore National Lab., CA (United States). Nov 1993. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE94005293. Source: OSTI; NTIS; GPO Dep.

The purpose of this document is to introduce and describe the Livermore Computing Production Control System, commonly called the PCS. Resource management is very difficult in typical UNIX and related systems. The weakness involves the allocation, control and delivery of the usage of computer resources. Accounting also is weak, being generally limited to reporting that a user used an amount of time on a process. A process accounting record is made only after the completion of a process and then only if the process does not terminate as a result of a system panic. Resources can only be allocated to users. No cognizance can be taken of organizational structure or projects. Allocations cannot be managed at these levels. Denying service to a user who has access to a machine is crude. Large computing centers frequently have thousands of users working on hundreds of projects. These users and the projects are funded by several organizations with varying ability or willingness to pay for the computer services provided. With only typical UNIX tools, the appropriate delivery of resources to the correct organizations, projects, tasks and users requires continual human intervention. UNIX and related systems have become increasingly more reliable over the past few years. A consequence of this is that resource managers and accountants have been presented with an attendant problem of accurate accounting for resources used. Processes can now run for days or months without terminating. A run-away process or a malicious or uninformed user can use an organization's budgeted resource allocation many times over before an accounting record to that effect is written. If a process's accounting record is not written because of a panic, the computer center is faced with possibly significant financial loss.

7950 (UCRL-JC–115318) **The High Performance Storage System.** Coyne, R.A. (IBM Federal Systems Co., Houston, TX (United States)); Hulen, H.; Watson, R. Lawrence Livermore National Lab., CA (United States). Sep 1993. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-931115–13: Supercomputing conference on high performance computing and communications, Portland, OR (United States), 15-19 Nov 1993). Order Number DE94004351. Source: OSTI; NTIS; GPO Dep.

The National Storage Laboratory (NSL) was organized to develop, demonstrate and commercialize technology for the storage system that will be the future repositories for our national information assets. Within the NSL four Department of Energy laboratories and IBM Federal System Company have pooled their resources to develop an entirely new High Performance Storage System (HPSS). The HPSS project concentrates on scalable parallel storage system for highly parallel computers as well as traditional supercomputers and workstation clusters. Concentrating on meeting the high end of storage system and data management requirements, HPSS is designed using network-connected storage devices to transfer data at rates of 100 million bytes per second and beyond. The resulting products will be portable to many vendor's platforms. The three year project is targeted to be complete in 1995. This paper provides an overview of the requirements, design issues, and architecture of HPSS, as well as a description of the distributed, multi-organization industry and national laboratory HPSS project.

7951 (UCRL-JC–115318-Rev.1) **The High Performance Storage System: Revision 1.** Coyne, R.A. (IBM Federal Systems Co., Houston, TX (United States)); Hulen, H.; Watson, R. Lawrence Livermore National Lab., CA (United States). Sep 1993. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-931115–13-Rev.1: Supercomputing conference on high performance computing and communications, Portland, OR (United States), 15-19 Nov 1993). Order Number DE94004350. Source: OSTI; NTIS; GPO Dep.

The National Storage Laboratory (NSL) was organized to develop, demonstrate and commercialize technology for the storage systems that will be the future repositories for our national information assets. Within the NSL four Department of Energy laboratories and IBM Federal Systems Company have pooled their resources to develop an entirely new High Performance Storage System (HPSS). The HPSS project concentrates on scalable parallel storage systems for highly parallel computers as well as traditional supercomputers and workstation clusters. Concentrating on meeting the high end of storage system and data management requirements, HPSS is designed using network-connected storage devices to transfer data at rates of 100 million bytes per second and beyond and to handle storage capacities measured in petabytes. The resulting products will be portable to many vendor's platforms. The three year project is targeted to be complete in 1995. This paper provides an overview of the requirements, design issues, and architecture of HPSS, as well as a description of the distributed, multi-organization industry and national laboratory HPSS project.

7952 (UCRL-JC–115601) **A concurrent, multigroup, discrete ordinates model of neutron transport.** Dorr, M.R.; Still, C.H. Lawrence Livermore National Lab., CA (United States). 22 Oct 1993. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-9310220–3: Institute of Electrical and Electronic Engineers (IEEE) meeting on scalable parallel libraries, Starkville, MS (United States), 6-8 Oct 1993). Order Number DE94004334. Source: OSTI; NTIS; GPO Dep.

The authors present an algorithm for the concurrent solution of the linear system arising from a multigroup, discrete ordinates model of neutron transport. The target architectures consist of distributed memory computers ranging from workstation clusters to massively parallel computers. Based on an analysis of the memory requirement and floating point complexity of matrix-vector multiplication in the iterative solution of the linear system, the authors propose a data layout and communication strategy designed to achieve scalability with respect to all phase space variables. Numerical results are presented to demonstrate the performance of the algorithm on the nCUBE/2.

7953 (WSRC-MS–93-168) **Risk assessment data banks at the Savannah River Site.** Townsend, C.S.; Durant, W.S.; Baughman, D.F. Westinghouse Savannah River Co., Aiken, SC (United States). [1993]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. (CONF-940312–11: 2. Probabilistic safety assessment and management conference (PSAM), San Diego, CA (United States), 20-24 Mar 1994). Order Number DE94001190. Source: OSTI; NTIS; INIS; GPO Dep.

In the risk assessment business, it is a well known fact that past mistakes will not be remembered if nothing is done to record them and make them available for future reference and review. The Savannah River Site maintains a computer database system for nonreactor facilities that contains a compilation of the incidents that have occurred since the start up of the Site in 1953. The nationally

recognized data banks are highly valued across the US Department of Energy (DOE) complex for their use in risk-related analyses. They provide data for uses such as failure rate analyses, equipment reliability and breakdown studies, project justification, incident investigations, design studies, Safety Analysis Reports, Process Hazards Reviews, consequence analyses, quality assurance studies, trend analyses, management decision, administrative control effectiveness studies, and process problem solving. Five risk assessment data banks exist in the areas of reprocessing, fuel fabrication, waste management, tritium, and the Savannah River Technology Center. The data banks are comprised of approximately one-third million entries collectively and continue to grow at a rate of about two hundred entries per day.

7954 (ANL/DIS/CP–81216) **Data considerations for modelbases.** Sutter, R.J.; Kero, R.E.; Campbell, A.P. Argonne National Lab., IL (United States). [1993]. 9p. Sponsored by Department of Defense, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9311148–1: Military Operations Research Society (MORS) mini symposium on simulation data and its management, Falls Church, VA (United States), 16-18 Nov 1993). Order Number DE94004614. Source: OSTI; NTIS; GPO Dep.

With increased emphasis on improving the approach toward model and simulation development, modelbase architectures offer one potential solution for solving interoperability and code reuse problems, as well as for providing a method to guide investment strategies. The adoption of a modelbase concept will require new approaches toward data sources: their definitions, their usage regulations, their life-cycle management, as well as their accessibility during the construction of models and simulations. To support future modelbase development and the construction of new models and simulations, this paper will address the need for: (1) self-describing data, (2) true data independence from application software, (3) multiple levels of granularity in data, and (4) dynamic module-specific data validation. In conjunction with these topics, the production and consumption of identifiable data by modelbase modules will also be described. The paper will address the bipartite structure of data - instantiated data together with its associated meta data, as well as the accessibility and potential uses of both of these information sources. This effort goes far beyond a common data dictionary since the data must not only describe itself, but also its valid uses. The current and future role of data dictionaries will be discussed in terms of this new nature of data required by future Modeling and Simulation (M & S) efforts.

7955 (K/DSRD/FTR–170) **Travel to France for the International Organization for Standardization work on computer security techniques: Foreign trip report, October 10–22, 1993.** Chester, R.O. Oak Ridge K-25 Site, TN (United States). 24 Nov 1993. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OT21400. Order Number DE94004158. Source: OSTI; NTIS (US Sales Only); GPO Dep.

This travel report describes the trip made by the traveler to the Association Francaise de Normalisation, Paris, France. The traveler is Recording Secretary of the American National Standards Institute Committee X3T4, Information Technology Security Techniques. She attended the October 1993, plenary meeting of the International Organization for Standardization Sub-Committee on information technology security techniques and a meeting of the Working Group on security techniques and mechanisms, which were held in Paris, France. Thirteen member nations participated in ballot comment resolution on the following draft international standards: Data integrity mechanisms using a cryptographic check function employing a block cipher algorithm, Hash functions - general framework, Hash functions using a n-bit block cipher algorithm. Publication of these documents as international standards will now take place. The following committee drafts were proposed as draft international standards: Entity authentication mechanisms using non-reversible functions, Non-repudiation using symmetric encipherment algorithms, Key management mechanisms using symmetric techniques, Key management mechanisms using asymmetric techniques. Liaison statements on key management by means of asymmetric algorithms between SC27 and the ISO Bank Operations and Procedures Technical Committee of SC21, Information Retrieval, Transfer and Management for Open Systems Interconnection, were prepared.

7956 (LIU-TEK-LIC–93-5) **Data Quality.** Linkoeping Studies in Science and Technology, 363. Wadstroemer, N. Linkoeping Univ. (Sweden). Dept. of Electrical Engineering. Feb 1993. 86p. Order Number DE94730422. Source: OSTI; NTIS.

There is a need to measure the quality of data to be able to determine if data are useful for different purposes and to be able to determine if different methods for protection of the quality of data are effective. Data are symbols from a given set which do not have a given meaning. The receiver interprets data in his context as information. If the interpretation is different from the collectors interpretation, data will from the receivers point of view have a poor quality. Data will not give a true image of the objects. Data quality is defined as the usefulness of data for a given purpose and a given user. In this thesis we present a reference model of data usage for decision making. The model is used to define data quality and to propose how data quality can be measured. We also propose some methods for utilising given data for a given purpose to achieve ideal decisions. We also make a brief philosophical study of the data quality problem and the proposed model. 18 refs

7957 (NUREG–1487-Vol.1) **Fiscal years 1994–1998 Information Technology Strategic Plan: Volume 1.** Nuclear Regulatory Commission, Washington, DC (United States). Office of Information Resources Management. Nov 1993. 21p. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). Source: OSTI; NTIS; INIS; GPO.

A team of senior managers from across the US Nuclear Regulatory Commission (NRC), working with the Office of Information Resources Management (IRM), has completed an NRC Strategic Information Technology (IT) Plan. The Plan addresses three major areas: (1) IT Program Management, (2) IT Infrastructure, and (3) Information and Applications Management. Key recommendations call for accelerating the replacement of Agency workstations, implementing a new document management system, applying business process reengineering to selected Agency work processes, and establishing an Information Technology Council to advise the Director of IRM.

7958 (NUREG/GR–0010) **Hybrid digital signal processing and neural networks for automated diagnostics using NDE methods.** Upadhyaya, B.R. (Tennessee Univ., Knoxville, TN (United States). Dept. of Nuclear Engineering); Yan, W. Nuclear Regulatory Commission, Washington, DC (United States). Div. of Engineering; Tennessee Univ., Knoxville, TN (United States). Dept. of Nuclear Engineering. Nov 1993. 136p. Sponsored by Nuclear Regulatory Commission, Washington, DC (United States). Source: OSTI; NTIS; INIS; GPO.

The primary purpose of the current research was to develop an integrated approach by combining information compression methods and artificial neural networks for the monitoring of plant components using nondestructive examination data. Specifically, data from eddy current inspection of heat exchanger tubing were utilized to evaluate this technology. The focus of the research was to develop and test various data compression methods (for eddy current data) and the performance of different neural network paradigms for defect classification and defect parameter estimation. Feedforward, fully-connected neural networks, that use the back-propagation algorithm for network training, were implemented for defect classification and defect parameter estimation using a modular network architecture. A large eddy current tube inspection database was acquired from the Metals and Ceramics Division of ORNL. These data were used to study the performance of artificial neural networks for defect type classification and for estimating defect parameters. A PC-based data preprocessing and display program was also developed as part of an expert system for data management and decision making. The results of the analysis showed that for effective (low-error) defect classification and estimation of parameters, it is necessary to identify proper feature vectors using different data representation methods. The integration

of data compression and artificial neural networks for information processing was established as an effective technique for automation of diagnostics using nondestructive examination methods.

7959 (PNL-SA–23053) **Strategic planning: Identifying organization information requirements.** Moise, C.S. Pacific Northwest Lab., Richland, WA (United States). [1993]. 31p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9310152–2: 34. Association of Energy Systems, Operations and Programming forum, Seattle, WA (United States), 27-29 Oct 1993). Order Number DE94003719. Source: OSTI; NTIS; GPO Dep.

Historically, information resource management has been left to the "data processing" arm of the organization. With technological movements away from centralized mainframe-based information processing toward distributed client/server-based information processing, almost every part of an organization is becoming more involved with the information technology itself, and certainly more involved with budgeting for the technology. However, users and buyers of information technology frequently remain dependent upon the information systems department for planning what users need and should buy. This paper reviews techniques for identifying requirements throughout an organization and structuring information resources to meet organizational needs. This will include basing information resource needs on meeting business needs, utilizing "internal" and "external" information resource planners, using information mapping, assessing information resources, and developing partnerships.

7960 (INIS-XN–467) **AECB Cost Recovery Fees Regulations, amendment.** Canada. 11 Mar 1992. 1p. (In English, French). Order Number DE94609511. Source: OSTI; NTIS (US Sales Only); INIS.

Published in the Canada Gazette Part II, Vol. 126, No 6.

The amendments to the AECB Cost Recovery Fees Regulations have been made with a view to simplifying the registration procedure for obtaining such a certificate or approval under the above Transport Regulations. In effect there will no longer be a need for a separate fee system for registered users of certified package designs. (NEA).

Corporate Author Index

This index lists the corporate authors responsible for issuing the documents in this publication which are identified primarily by report number. The corporate names are entered in standardized forms as defined in ETDE/PUB–3 (Rev.1), *International Energy: Research Organizations 1988–1992*. Each entry under a corporate name includes the document title and citation number. Three items of information may appear in parentheses: (1) an abbreviation to identify the document type, such as a report; (2) the country of publication, indicated by International Organization for Standardization (ISO) country code; and (3) the language of the document if non-English (R;CA;In French). Author affiliations are not listed in this index.

Confined zone dispersion flue gas desulfurization demonstration: Quarterly report No. 9, November 17, 1992–February 16, 1993, 19:6590 (R;US)
Confined zone dispersion flue gas desulfurization demonstration: Quarterly report No. 10, February 17–May 31, 1993, 19:6591 (R;US)
Confined zone dispersion flue gas desulfurization demonstration: Quarterly report No. 8, August 17, 1992–November 16, 1992, 19:6058 (R;US)

Bechtel National, Inc., Oak Ridge, TN (United States)
Waste Management Plan for the Remedial Investigation of Waste Area Grouping 10, Operable Unit 3, at Oak Ridge National Laboratory, Oak Ridge, Tennessee: Environmental Restoration Program, 19:6279 (R;US)

Bern Univ. (Switzerland)
Simulation of the carbon cycle in the oceans: Annual report, Third year, September 15, 1992–September 14, 1993, 19:7467 (R;US)

Bethlehem Steel Corp., PA (United States)
Innovative coke oven gas cleaning system for retrofit applications: Quarterly technical progress report No. 4, October 1, 1990 to December 31, 1990, 19:6056 (R;US)

Bettis Atomic Power Lab., Pittsburgh, PA (United States)
Large scale steam flow test: Pressure drop data and calculated pressure loss coefficients, 19:7174 (R;US)

Bettis Atomic Power Lab., West Mifflin, PA (United States)
A modified finite element procedure for underwater shock analysis, 19:7160 (R;US)
An improvement in the modified finite element procedure for underwater shock analysis, 19:7186 (R;US)
Analysis of benchmark critical experiments with ENDF/B-VI data sets, 19:6651 (R;US)
Initial data testing of ENDF/B-VI for thermal reactor benchmark analysis, 19:6600 (R;US)
The qualification of NDT inspection personnel in the naval nuclear propulsion program, 19:7184 (R;US)

Bonn Univ. (Germany). Physikalisches Inst.
Low-temperature expansions and correlation functions of the Z_3-chiral Potts model, 19:7525 (R;DE)
Naked singularities in four-dimensional string backgrounds, 19:7572 (R;DE)
New supersymmetrizations of the generalized KDV hierarchies, 19:7571 (R;DE)

Brigham Young Univ., Provo, UT (United States)
Particulate behavior in a controlled-profile pulverized coal-fired reactor: A study of coupled turbulent particle dispersion and thermal radiation transport: Quarterly technical progress report, March 15, 1993–June 14, 1993, 19:6072 (R;US)

British Steel plc, Rotherham (United Kingdom). Technical Swinden Labs.
Continuous steel reheating furnaces: specification, design and equipment, 19:6875 (I;GB)
Continuous steel reheating furnaces: operation and maintenance, 19:6876 (I;GB)
Energy efficient ladle pre-heating techniques within the steel industry, 19:6880 (I;GB)

Brookhaven National Lab., Upton, NY (United States)
A first look at LOCAs in the SBWR using RELAP5/MOD3, 19:6596 (RA;US)
A step-height standard for surface profiler calibration, 19:7351 (R;US)
A storage ring based inverse Compton scattering angiography source?, 19:7491 (R;US)
Ac losses for the self field of an ac transport current with a dc transport current offset in high T_c superconducting magnet coils for MagLev application, 19:7788 (R;US)
Amended proposal for R&D on a cluster klystron, 19:7238 (R;US)
Analyses of reliability characteristics of emergency diesel generator population using empirical Bayes methods, 19:6702 (R;US)
Computer simulation of martensitic transformations, 19:6981 (R;US)
Demonstration of no feasibility of a crystalline beam in a Betatron Magnet II, 19:7217 (R;US)
Derivation of a Fokker-Planck equation for bunched beams: Revision, 19:7216 (R;US)
Effects of the third order transfer maps and solenoid on a high brightness beam, 19:7215 (R;US)
Full cycle beam diagnostics with an ionization profile monitor, 19:7239 (R;US)
Future directions in particle and nuclear physics at multi-GeV hadron beam facilities, 19:7561 (R;US)
High baryon density from relativistic heavy ion collisions, 19:7690 (R;US)
In-situ containment and stabilization of buried waste: Annual report FY 1993, 19:7429 (R;US)
Low frequency dynamics of CO/Cu-breakdown of Born-Oppenheimer approximation, 19:7749 (R;US)
Modeling the degradation of nuclear components, 19:6705 (R;US)
National Synchrotron Light Source operations policies, operational safety limits and policy upgrades: Revision, 19:7199 (R;US)
On the liquefaction failure of an earth dam, 19:7140 (R;US)
Ozone production at a rural site in Georgia during the summer 1992 SOS campaign, 19:7387 (R;US)
Production of ϕ mesons in central Si + Au collisions at 14.6 A·GeV/c, 19:761^{F} (R;US)
Recent results and directions in hypernuclear and Kaon physics, 19:7672 (R;US)
Sensitivity and uncertainty analyses in aging risk-based prioritizations, 19:6703 (R;US)
Sensitivity and uncertainty analyses in aging risk-based prioritizations, 19:6704 (R;US)
Small oil-fired heating equipment: The effects of fuel quality, 19:6114 (R;US)
Stochastic cooling requirements for a muon collider, 19:7214 (R;US)
Surface modes and chiral symmetry (Wilson fermions in a box), 19:7750 (R;US)
Technical Specification action statements requiring shutdown: A risk perspective with application to the RHR/SSW systems of a BWR, 19:6729 (R;US)

The E2/M1 mixing ratio in the excitation of the Δ from polarized photo-reactions, 19:7614 (R;US)
The validation of ATSR measurements with in situ sea temperatures, 19:7388 (R;US)
Travel to the collaboration meeting of the RD5 experiment at CERN, 19:7240 (R;US)
Understanding aging in containment cooling systems, 19:6706 (R;US)

Brown Univ., Providence, RI (United States). Dept. of Physics
Progress report of a research program in experimental and theoretical high energy physics, 1 June 1992–May 31, 1993, 19:7311 (R;US)
Research and development of a helium-4 based solar neutrino detector: Progress report, November 1, 1991–April 30, 1993, 19:7308 (R;US)

Brown Univ., Providence, RI (United States). Div. of Engineering
Characterization of porosity via secondary reactions: Quarterly technical progress report, 1 July 1993–30 September 1993, 19:6052 (R;US)
Vapor pressures and heats of vaporization of primary coal tars: Quarterly technical progress report, 1 July 1993–30 September 1993, 19:6053 (R;US)

Bundesamt fuer Strahlenschutz, Berlin (Germany). Fachbereich Strahlenschutz
Quality assurance of dose rate measurements in the natural radiation field, 19:7301 (R;DE;In German)

Bundesamt fuer Strahlenschutz, Salzgitter (Germany). Fachbereich Kerntechnische Sicherheit
Status and development of nuclear energy utilization in the Federal Republic of Germany - as of May 1993, 19:6803 (R;DE;In German)

Bureau of Mines, Pittsburgh, PA (United States). Pittsburgh Research Center
Safer blasting agents and procedures for blasting in gassy non-coal mines: [Quarterly] technical progress report, January 1–March 31, 1993, 19:6119 (R;US)

Bureau of Mines, Washington, DC (United States)
Annual stability evaluation of Waste Isolation Pilot Plant, 19:6146 (R;US)

C

California Inst. of Tech., Pasadena, CA (United States)
PEP-II: An asymmetric B factory: Conceptual design report, 19:7297 (R;US)

California Univ., Berkeley, CA (United States)
Experimental and numerical investigation of shock wave propagation through complex geometry, gas continuous, two-phase media, 19:7822 (R;US)
Population differentiation in tree-ring growth response of white fir (Abies concolor) to climate: Implications for predicting forest responses to climate change, 19:7439 (R;US)

California Univ., Berkeley, CA (United States). Dept. of Materials Science and Mineral Engineering
Oxidation of coal and coal pyrite mechanisms and influence on surface characteristics: Technical progress report, [June–August 1993], 19:6012 (R;US)

California Univ., Berkeley, CA (United States). Dept. of Physics
Magnetic, optical and charge-transfer spectra of antiferromagnetic solid α-O_2 and "paramagnetic" solid β-O_2: A small-cluster, many-electron calculation, 19:7744 (R;US)

California Univ., Berkeley, CA (United States). Intercampus Inst. for Research
PEP-II: An asymmetric B factory: Conceptual design report, 19:7297 (R;US)

California Univ., Davis, CA (United States)
Formation and emission of methane in rice soils: Experimental determination and modeling analysis: Final report, 19:7392 (R;US)
Methane emissions from natural wetlands, 19:7393 (R;US)

California Univ., Santa Barbara, CA (United States). Dept. of Chemical and Nuclear Engineering
The probability of Mark-I containment failure by melt-attack of the liner, 19:6730 (R;US)

California Univ., Santa Barbara, CA (United States). Inst. for Theoretical Physics
Heavy quark symmetry: Theory and applications, 19:7596 (R;US)

Calm (James M.), Great Falls, VA (United States)
ARTI Refrigerant Database: [Quarterly progress report, 1 July 1993–30 September 1993], 19:7390 (R;US)

Canada
AECB Cost Recovery Fees Regulations, amendment, 19:7960 (I;CA;In English, French)
SOR/92-150, 27 February 1992, Transport Packaging of Radioactive Materials, amendment, 19:6315 (I;CA;In English, French)

Carnegie-Mellon Univ., Pittsburgh, PA (United States). Center for Energy and Environmental Studies
Development of the integrated environmental control model: Performance models of selective catalytic reduction NO_x control systems: Quarterly progress report, [April 1, 1993–June 30, 1993], 19:6592 (R;US)

Carnegie-Mellon Univ., Pittsburgh, PA (United States). Dept. of Mechanical Engineering
The effect of turbulence on the stability of liquid jets and the resulting droplet size distributions: Third quarterly technical report, July 1, 1993–September 30, 1993, 19:7173 (R;US)

CEA Centre d'Etudes de Fontenay-aux-Roses, 92 (France). Dept. de Protection de l'Environnement et des Installations
Prefiltration of incineration gaseous wastes by granular bed filter, 19:6143 (R;FR)

CEA Centre d'Etudes de Grenoble, 38 (France). Dept. de Recherche Fondamentale sur la Matiere Condensee
Characterization of highly charged ions by secondary electron emission, 19:7691 (R;FR)

CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)
Oceanic circulation code on connection machine, 19:7907 (R;FR;In French)

CEA Centre d'Etudes de Saclay, 91 - Gif-sur-Yvette (France). Dept. d'Electronique et d'Instrumentation Nucleaire
Low level transuranic waste assay by photon interrogation and neutron counting, 19:6144 (R;FR;In English, French)

Cenergia ApS, Ballerup (Denmark)
Development of solar air heaters, 19:6489 (R;DK;In Danish)
Pilot project for solar house Egebjerggaard, 19:6487 (R;DK;In Danish)

CER Corp., Las Vegas, NV (United States)
Slant hole completion test: Final report, 19:6115 (R;US)

Ceskoslovenska Akademie Ved, Prague (Czech Republic). Geofyzikalni Ustav
Activity report 1990-1992 and proceedings. Volume I, 19:7444 (R;CZ)
Activity report 1990-1992 and proceedings. Volume II, 19:7446 (R;CZ)
Investigation of spectral and spatial microseismic noise characteristics around Kozloduy NPP (Bulgaria), 19:7445 (RA;CZ)
Investigations of the connection between seismicity and ^{222R}n-CO_2 content in spring waters at the Vogtland area (Germany): first results, 19:7475 (RA;CZ)

Chalmers Univ. of Technology, Gothenburg (Sweden). Dept. of Chemical Environmental Science
Determination of volatile hydrocarbons in air, 19:7415 (R;SE;In Swedish)
Terpenes emitted to air from forestry and the forest industry, 19:7416 (R;SE)
Volatile hazardous hydrocarbons in road tunnels, cars and smoky rooms, 19:7414 (R;SE)

Chapman (Don) Consultants, Inc., Redmond, WA (United States)
Juvenile passage program: A plan for estimating smolt travel time and survival in the Snake and Columbia Rivers, 19:7482 (R;US)

Chicago Univ., IL (United States)
Ecological risk assessment guidance for preparation of remedial investigation/feasibility study work plans, 19:6255 (R;US)

Chicago Univ., IL (United States). Enrico Fermi Inst.
Electron microscope studies: Progress report, June 1, 1992–November 1, 1993, 19:7752 (R;US)

Christian Michelsen Research A/S, Bergen (Norway)
A new multi-path ultrasonic flow meter for gas, 19:6117 (R;NO)

Christian Michelsen Research (CMR) multiphase flow rig: Reference system uncertainties, 19:6111 (R;NO)
Misperception and mismanagement of the greenhouse effect?: The simulation model, 19:6767 (R;NO)
Model-based measurement of multiphase flow, 19:6110 (R;NO)
Petroleum tax systems and risk sharing, 19:6817 (R;NO)

Christian Michelsens Inst. for Vitenskap og Aandsfrihet, Bergen (Norway)
Mist explosions on offshore structures: Experiments performed at Chr. Michelsen Institute, 19:6096 (R;NO)

City Coll., New York, NY (United States). Dept. of Chemical Engineering
Partial control of complex processing systems: Progress report, September 15, 1993–September 14, 1994, 19:6091 (R;US)

Clark Atlanta Univ., GA (United States). Dept. of Chemistry
The role of catalyst precursor anions in coal gasification: Eighth quarterly report, [July–September 1993], 19:6035 (R;US)

Clarkson Univ., Potsdam, NY (United States). Dept. of Chemical Engineering
Analysis and computer tools for separation processes involving nonideal mixtures: Progress report, December 1, 1992–November 30, 1993, 19:7091 (R;US)

Clarkson Univ., Potsdam, NY (United States). Dept. of Mechanical and Aeronautical Engineering
A computational model for coal transport and combustion: Quarterly technical progress report, June 1, 1993–August 31, 1993, 19:6063 (R;US)

Clemson Univ., SC (United States)
Air extraction in gas turbines burning coal-derived gas, 19:6574 (R;US)

Clemson Univ., SC (United States). Dept. of Mechanical Engineering
Identifying technology barriers in adapting a state-of-the-art gas turbine for IGCC applications and an experimental investigation of air extraction schemes for IGCC operations: Final report, 19:6575 (R;US)

Colorado School of Mines, Golden, CO (United States). Center for Wave Phenomena
Efficient modeling in transversely isotropic inhomogeneous media, 19:7516 (R;US)

Colorado School of Mines, Golden, CO (United States). Dept. of Physics
Colorado School of Mines low energy nuclear physics project: Final technical progress report, 19:7708 (R;US)

Colorado State Univ., Fort Collins, CO (United States)
Advanced NMR approaches in the characterization of coal: Final technical report, September 1, 1990–August 31, 1993, 19:6051 (R;US)
Effects of vegetation of radon transport processes in soil: The origins and pathways of ^{222}Rn entering into basement structures: Final report, March 15, 1987–May 15, 1993, 19:7432 (R;US)

Colorado State Univ., Fort Collins, CO (United States). Dept. of Chemistry
Advanced NMR approaches in the characterization of coal: [Quarterly] report No. 12, [April–June 1993], 19:6050 (R;US)

Columbia Univ., New York, NY (United States)
Translational-energy-resolved studies of photogenerated carrier-induced reactions on UHV semiconductor surfaces, 19:7050 (R;US)
[Relativistic heavy ion research]: [Annual report for 15 November 1992–14 November 1993], 19:7706 (R;US)

Columbia Univ., New York, NY (United States). Plasma Physics Lab.
Passive stabilization of MHD instabilities at high βn in the HBT-EP Tokamak, 19:7804 (R;US)

Combustion Engineering, Inc., Windsor, CT (United States)
System 80+™ Standard Design: CESSAR design certification: Volume 1: Amendment I, 19:6713 (R;US)
System 80+™ Standard Design: CESSAR design certification: Volume 2: Amendment I, 19:6714 (R;US)
System 80+™ Standard Design: CESSAR design certification: Volume 3: Amendment I, 19:6715 (R;US)
System 80+™ Standard Design: CESSAR design certification: Volume 4: Amendment I, 19:6716 (R;US)
System 80+™ Standard Design: CESSAR design certification: Volume 6: Amendment I, 19:6717 (R;US)
System 80+™ Standard Design: CESSAR design certification: Volume 7: Amendment I, 19:6718 (R;US)

Commission of the European Communities, Abingdon (UK). JET Joint Undertaking
Application of dynamic response analysis to JET heat pulse data, 19:7827 (R;GB)

Participation in the IEA workshop on low activation materials: Foreign trip report, April 8–12, 1991, 19:7863 (R;US)
Participation in the Second International Symposium on Fusion Nuclear Technology: Foreign trip report, May 31–June 12, 1991, 19:7857 (R;US)
PHAZE: Parametric Hazard Function Estimation, 19:7918 (CM;US)
Test plan for dig-face characterization performance testing, 19:6159 (R;US)
Test plan for the Rapid Geophysical Surveyor, 19:6271 (R;US)
Travel to Germany and Italy for meetings on fusion reactor materials: Foreign trip report, September 21–October 8, 1993, 19:7868 (R;US)
Travel to Germany to discuss European licensing of potential ITER design options: Foreign trip report, July 10–17, 1993, 19:7864 (R;US)
Travel to Vienna, Austria for meeting on the safety of VVER 440/230 NPPs: Foreign trip report, December 9–13, 1991, 19:6709 (R;US)

EG and G Rocky Flats, Inc., Golden, CO (United States)
MACCS usage at Rocky Flats Plant for consequence analysis of postulated accidents, 19:6284 (R;US)
Qualitative safety analysis of proposed material relocation options, 19:7507 (R;US)
Travel to France to SUBWOG 30A meeting and the Third International Molten Salt Chemistry and Technology Symposium: Foreign trip report, July 8–12, 1991, 19:6133 (R;US)

EG and G Rocky Flats, Inc., Golden, CO (United States). Rocky Flats Plant
Fire risk assessments at Rocky Flats Plant, 19:6285 (R;US)

Electric Power Research Inst., Palo Alto, CA (United States)
Account of requirements for modernization in VPBER-600 enhanced safety reactor instrumentation and control system development, 19:6667 (RA;US)
Addressing the susceptibility of digital systems to electromagnetic interference, 19:6669 (RA;US)
Aging, maintenance and modernization of instrumentation at the ORNL High Flux Isotope Reactor, 19:6695 (RA;US)
Cable aging tests, 19:6659 (RA;US)
Computer software review procedures, 19:6676 (RA;US)
Effects of normal aging on calibration and response time of nuclear plant RTDs and pressure sensors, 19:6662 (RA;US)
Experience in installing a microprocessor-based protection system on a UK nuclear power plant, 19:6678 (RA;US)
In-situ measurement of response time of RTDs and pressure transmitters in nuclear power plants, 19:6660 (RA;US)
Instrumentation and control system upgrade plan for operating PWR plants in Japan, 19:6618 (RA;US)
License renewal, 19:6640 (RA;US)
Life extension activities and modernization strategies for instrumentation & control systems of research and power reactors in India, 19:6696 (RA;US)
Modernisation of the Borssele NPP reactor protection system, 19:6619 (RA;US)
Pilot studies of management of ageing of nuclear power plant instrumentation and control components, 19:6661 (RA;US)
Predictive maintenance of electrical components through computer-controlled acquisition and trending of standard circuit parameters, 19:6664 (RA;US)
Qualification issues associated with the use of advanced instrumentation and control systems hardware in nuclear power plants, 19:6597 (RA;US)
Reactor safety instrumentation of Paks NPP (experience and perspective), 19:6617 (RA;US)
Recent activities within Nuclear Electric related to the qualification of digital systems and the extension of maintenance intervals, 19:6621 (RA;US)
Regulatory perspective on digital instrumentation and control systems for future advanced nuclear power plants, 19:6641 (RA;US)
Regulatory requirements for replacement of analog systems with digital upgrades, 19:6668 (RA;US)
Reliability analysis of microprocessor-based control and protection systems in nuclear power plants, 19:6682 (RA;US)
Rosemount transmitters – supplement to Bulletin 90-01, 19:6666 (RA;US)
Software maintenance and re-validation for nuclear power plants, 19:6681 (RA;US)
Strategy to safety grade systems replacements, 19:6679 (RA;US)
The effects of aging on electrical and I&C components: Results of US Nuclear Plant Aging Research, 19:6665 (RA;US)
The role of international standards in the design of modern I&C systems for nuclear power plants, 19:6680 (RA;US)
US utility I&C upgrade initiative, 19:6677 (RA;US)
Validation of on-line monitoring techniques for in-situ testing of calibration drift of process instrumentation channels in nuclear power plants, 19:6663 (RA;US)

Electricite de France (EDF), 92 - Clamart (France)
Heat transfer in a 125 MWe CFB boiler, 19:6579 (R;FR;In French)
Heat transfer measurement and analysis in a 125 MWe circulating fluidized bed boiler, 19:6580 (R;FR;In French)
Hydrogen-powered vehicles, 19:6326 (R;FR;In French)
The influence of falling film heat and mass transfer on the cycle of compression/absorption machines, 19:6871 (R;FR;In French)

Eley Associates, San Francisco, CA (United States)
Advanced lighting guidelines: 1993: Final report, 19:6844 (R;US)

ELKRAFT A.m.b.A., Ballerup (Denmark)
Situation analysis for integrated resource planning in the Danish electric utilities, 19:6826 (R;DK)

ENEA, Frascati (Italy). Dipt. Sviluppo Tecnologie di Punta
Emission properties of gamma irradiated LiF crystals excited in F absorption band by excimer laser, 19:7778 (RA;IT)
KCl films: Photoluminescence of F-aggregate centres, 19:7780 (RA;IT)
Optical gain of F2 and F3 centers in thin and colored layers of LiF, 19:7779 (RA;IT)

Energetics, Inc., Columbia, MD (United States)
Industrial innovations for tomorrow: Advances in industrial energy-efficiency technologies: Commercial power plant tests blend of refuse-derived fuel and coal to generate electricity, 19:6064 (R;US)

Energistyrelsen, Copenhagen (Denmark)
Development of Danish district heating, 19:6806 (RA;DK)
Distribution system and consumer connections, 19:6904 (RA;DK)
District heating: A clean solution, 19:6821 (RA;DK)
District heating in Denmark: Research and technological development, 19:6901 (R;DK)
Economy and organisation, 19:6807 (RA;DK)
Low-temperature district heating, 19:6903 (RA;DK)
New developments and future technologies, 19:6808 (RA;DK)
Principles of combined heat and power generation, 19:6902 (RA;DK)

Energy Conversion Devices, Inc., Troy, MI (United States)
Continuous roll-to-roll a-Si photovoltaic manufacturing technology: Annual subcontractor report, 1 April 1992–31 March 1993, 19:6471 (R;US)

Energy International Corp., Pittsburgh, PA (United States)
Technology development for cobalt F-T catalysts: Quarterly technical progress report No. 1, September 25, 1992 to December 31, 1992, 19:6037 (R;US)

Energy Technology Support Unit, Harwell (United Kingdom)
Continuous steel reheating furnaces: specification, design and equipment, 19:6875 (I;GB)
Continuous steel reheating furnaces: operation and maintenance, 19:6876 (I;GB)
Electric holding of hot metal in iron foundries, 19:6874 (I;GB)
Energy efficient ladle pre-heating techniques within the steel industry, 19:6880 (I;GB)
Energy efficient liquid ring vacuum pump installations in the paper industry, 19:6877 (I;GB)
Managing and motivating staff to save energy, 19:6911 (I;GB)
Metal distribution and handling in iron foundries, 19:6872 (I;GB)
Reducing energy consumption and costs in small bakeries, 19:6873 (I;GB)
Rubber compounding in the rubber processing industry, 19:6879 (I;GB)
The pharmaceutical industry, 19:6878 (I;GB)

EQE International, Inc., Irvine, CA (United States)
Analysis of the LaSalle Unit 2 nuclear power plant: Risk Methods Integration and Evaluation Program (RMIEP): Volume 8, Seismic analysis, 19:6724 (R;US)

F

Fairfield Univ., CT (United States)
SSC and G-2 calorimeter and optical calibration: Progress report, September 15, 1992–September 14, 1993, 19:7310 (R;US)

Fermi National Accelerator Lab., Batavia, IL (United States)
A dependence of exclusive vector meson production in muon-nucleus scattering, 19:7624 (R;US)
A measurement of the W mass using electrons at CDF, 19:7658 (R;US)
A search for rapidity gap events in $p\bar{p}$ collisions at D0, 19:7633 (R;US)
An overview of plastic optical fiber end finishers at Fermilab, 19:7265 (R;US)
B production and $B^0\bar{B}^0$ mixing at D0, 19:7634 (R;US)
B-lifetime measurements at the tevatron, 19:7657 (R;US)
Betatron stochastic cooling in the Debuncher: Present and future, 19:7263 (R;US)
Distributing functionality in the Drift Scan Camera System, 19:7354 (R;US)
Energy losses in the D0 β solenoid cryostat caused by current changes, 19:7264 (R;US)
FASTBUS readout system for the CDF DAQ upgrade, 19:7318 (R;US)
Heavy flavor production at fixed target photo- and hadroproduction, 19:7630 (R;US)
Heavy quark production and spectroscopy, 19:7627 (R;US)
Jet production in muon scattering at Fermilab E665, 19:7631 (R;US)
Measurement of the elastic, total and single diffraction cross sections at Tevatron energies, 19:7625 (R;US)
Measurement of the elastic, total and diffraction cross sections at tevatron energies, 19:7635 (R;US)
New particle searches at CDF, 19:7626 (R;US)
Overview of a robotic system for azimuthal dimensions of SSC dipole coils, 19:7261 (R;US)
Panel session: Part 1, In flux – Science Policy and the social structure of Big Laboratories, 1964–1979, 19:7570 (R;US)
Photon and hadron production of heavy flavors, 19:7629 (R;US)
Radiation hardness of 3HF-tile/O2-WLS-fiber calorimeter, 19:7319 (R;US)
Search for excited quarks in $p\bar{p}$ collisions at $\sqrt{s}$ = 1.8 TeV, 19:7632 (R;US)
Search for the top quark in the single lepton + jets channel at D0, 19:7636 (R;US)
Sloan Digital Sky Survey, 19:7539 (R;US)
The CDF SVX II detector upgrade, 19:7317 (R;US)
Theory, technology, and technique of stochastic cooling, 19:7218 (R;US)
Top quark search at CDF, 19:7628 (R;US)
Topics in radiation at accelerators: Radiation physics for personnel and environmental protection, 19:7262 (R;US)
Travel to Switzerland to confer with colleagues in the CERN Computing and Networks Division: Foreign trip report, March 8–16, 1991, 19:7200 (R;US)

Fernald Environmental Restoration Management Corp., Cincinnati, OH (United States)
Acceleration of the remediation process through interim action, 19:6274 (R;US)
Fernald scrap metal recycling and beneficial reuse, 19:6161 (R;US)
Streamlining the OU3 RI/FS process to accommodate decontamination and dismantlement at Fernald, 19:6273 (R;US)

Ferraro, Oliver, and Associates, Inc., Knoxville, TN (United States)
Understanding Superconducting Magnetic Energy Storage (SMES) technology, applications, and economics, for end-use workshop, 19:6757 (R;US)

Finnish Pulp and Paper Research Inst., Espoo (Finland)
Energy-efficient manufacture of groundwood and refiner groundwood, 19:6882 (R;FI;In Finnish)
New possibilities for energy conservation in mechanical pulping, 19:6881 (R;FI;In Finnish)

Florida Univ., Gainesville, FL (United States)
Studies of granular flow down an inclined chute: Quarterly technical progress report, Year Three, Quarter Three, 13 June 1993–12 September 1993, 19:6062 (R;US)

Florida Univ., Gainesville, FL (United States). Inst. for Fundamental Theory
Task A: Research in theoretical elementary particle physics at the University of Florida: Annual progress report, 19:7563 (R;US)

Forschungszentrum Juelich GmbH (Germany). Abt. Sicherheit und Strahlenschutz
Measuring program of the Federal Republic of Germany: External radiation exposure in the Republics of Russia and White Russia during the summer of 1992 calculated for individuals from the Briansk and Gomel regions, 19:7502 (R;DE;In German)
Measuring program of the Federal Republic of Germany: Results of the environment measurements in Russia, Belarus and Ukraine from May 12 to September 26, 1992, 19:7448 (R;DE;In German)

Forschungszentrum Juelich GmbH (Germany). Inst. fuer Kernphysik
Installation and operation of a computer-controlled measuring assembly for dynamic measurements of dipole excitation cycles at COSY, 19:7294 (R;DE;In German)
The elastic pion-nucleon interaction in the meson exchange picture, 19:7643 (R;DE;In German)

Forschungszentrum Juelich GmbH (Germany). Inst. fuer Schicht- und Ionentechnik
Construction of a computer-assisted experimental facility for recording the voltage-current characteristic of amorphous solar modules, 19:6481 (R;DE;In German)

Forschungszentrum Juelich GmbH (Germany). Inst. fuer Sicherheitsforschung und Reaktortechnik
The depletion computer code ORIGEN-JUEL-II, 19:6647 (R;DE)

Foster Wheeler Development Corp., Livingston, NJ (United States)
Second-generation pressurized fluidized bed combustion plant: Conceptual design and optimization of a second-generation PFB combustion plant: Annual report, October 1, 1991–September 30, 1992, 19:6570 (R;US)
The advanced PFB process: Pilot plant results and design studies, 19:6569 (R;US)

Foster-Miller, Inc., Waltham, MA (United States)
Development of a demand defrost controller: Final report, 19:6853 (R;US)

G

Gas Research Inst., Chicago, IL (United States)
Core based stress measurements: A guide to their application: Topical report, July 1991–June 1993, 19:6090 (R;US)

General Atomics, San Diego, CA (United States)
A robust helium-cooled shield/blanket design for ITER, 19:7873 (R;US)
ARIES-IV Nested Shell Blanket Design, 19:7874 (R;US)
Fuel ion rotation measurement and its implications on H-mode theories, 19:7824 (R;US)
Helium transport and exhaust studies of H-mode discharges in the DIII-D tokamak, 19:7797 (R;US)
Review of tokamak experiments on direct electron heating and current drive with fast waves, 19:7823 (R;US)
Surface impurity removal from DIII-D graphite tiles by boron carbide grit blasting, 19:7871 (R;US)
Upgrade of DIII-D toroidal magnetic field power supply controls, 19:7872 (R;US)

General Electric Co., Erie, PA (United States). Transportation Systems Business Operation
Coal-fueled diesel engines for locomotive applications, 19:6913 (R;US)

General Electric Co., Richland, WA (United States). Hanford Atomic Products Operation
Radioactive liquid waste disposal for October, 1964, 19:6167 (R;US)
Radioactive liquid waste disposal for August, 1964, 19:6166 (R;US)
Review of effluent disposal practices in N Reactor Department, 19:6684 (R;US)
Scope design for conversion of Purex anion exchange prototype to a manufacturing facility, 19:6134 (R;US)
Standby status report Hot Semiworks facility, 19:6124 (R;US)

General Electric Co., San Jose, CA (United States)
Study of Pu consumption in Advanced Light Water Reactors: Evaluation of GE Advanced Boiling Water Reactor plants: Compilation of Phase 1B task reports, 19:6595 (R;US)

General Electric Co., Schenectady, NY (United States). Corporate Research and Development Center
Enhanced durability of high-temperature desulfurization sorbents for moving-bed applications: Option 2 Program: Development and testing of zinc titanate sorbents, 19:6021 (R;US)

General Motors Corp., Indianapolis, IN (United States). Allison Gas Turbine Div.
Direct coal-fired gas turbines for combined cycle plants, 19:6571 (R;US)

Geological Survey, Denver, CO (United States)
An estimate of the roughness length and displacement height of Sonoran Desert vegetation, south-central Arizona, 19:7461 (R;US)

Geological Survey, Menlo Park, CA (United States)
Geodetic leveling data used to define historical height changes between Tonopah Junction and Las Vegas, Nevada, 19:6202 (R;US)

Geological Survey, Reston, VA (United States)
An estimate of the roughness length and displacement height of Sonoran Desert vegetation, south-central Arizona, 19:7461 (R;US)

George Washington Univ., Washington, DC (United States). Office of Sponsored Research
New high temperature plasmas and sample introduction systems for analytical atomic emission and mass spectrometry: Progress report: January 1, 1993–December 31, 1993, 19:7093 (R;US)

Georgia Inst. of Tech., Atlanta, GA (United States)
[Reactive collisions of high-temperature systems]: [Technical progress report 1990], 19:7746 (R;US)

Georgia Inst. of Tech., Atlanta, GA (United States). School of Mechanical Engineering
The evaluation of the use of metal alloy fuels in pressurized water reactors: Final report, 19:6601 (R;US)

Georgia Univ., Athens, GA (United States)
Growth, life history, and species interactions of bluegill sunfish (Lepomis macrochirus) under heavy predation, 19:7471 (R;US)

Geoteknisk Inst., Lyngby (Denmark)
A stochastic model for two-phase flow in heterogeneous porous media, 19:7176 (RA;DK)
Progress report no. 73, 19:7175 (R;DK)

Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany)
Experimental radiotherapy unit to be established at GSI in Darmstadt, 19:7493 (R;DE;In German)

Gilbert/Commonwealth, Inc., Knoxville, TN (United States)
Surveillance Plan for environmental monitoring in Waste Area Grouping 6 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 19:6179 (R;US)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (Russian Federation). Fiziko-Ehnergeticheskij Inst.
Excitation of the reaction of ^{123}I, ^{123}Xe and ^{123}Cs radionuclides production: Experimantal and calculational data, 19:7683 (R;RU;In Russian)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (Russian Federation). Inst. Fiziki Vysokikh Ehnergij
Angular dependence of parton-parton scattering extracted from hadron pair production in pp collisions at $\sqrt{s}$=11.5 GeV, 19:7639 (R;RU)
Electronuclear facility on the deuteron storage ring basis, 19:7293 (R;RU;In Russian)
Irradiation of beam extraction equipment of the IHEP proton synchrotron: Part 2. Work with high intensity, 19:7266 (R;RU;In Russian)
Isoscalar vector bosons at LEP 2, 19:7660 (R;RU)
Leptonic decay constants of heavy quarkonia in effective QCD sum rules, 19:7603 (R;RU)
Numerical method to study the stability of periodic solutions of particle motion in nonlinear magnetic fields, 19:7221 (R;RU;In Russian)
On possibility of application of RFQ focusing in proton linacs at energies 100 MeV and above, 19:7219 (R;RU;In Russian)
Operation of the bent single crystal in intense beams, 19:7220 (R;RU;In Russian)

Grafton Interaction, London (United Kingdom)

ARDEC transition armature study: Progress report No. 3, October 1–November 30, 1991, 19:7157 (R;US)
Backward emission of protons in Au+Au collisions at 11.7 A.GeV/c, 19:7739 (R;US)
Characterization of physically vapor deposited AF2400 thin films, 19:7358 (R;US)
CHAWS user's guide: System description and standard operating procedures, Lexington-Blue Grass Army Depot, 19:7421 (R;US)
Computer simulations of WIGWAM underwater experiment, 19:7380 (R;US)
Coordination chemistry of two heavy metals: I, Ligand preferences in lead(II) complexation, toward the development of therapeutic agents for lead poisoning: II, Plutonium solubility and speciation relevant to the environment, 19:7122 (R;US)
Criticality safety evaluation for Portsmouth X-345 High-Enriched-Uranium storage area, 19:7158 (R;US)
Electric utility system master plan, 19:6750 (R;US)
Energy and technology review, July 1993, 19:6912 (R;US)
Equation of state of stellar plasmas, 19:7560 (R;US)
Evaluation of the Atmospheric Release Advisory Capability emergency response model for explosive sources, 19:7424 (R;US)
Fire tests to evaluate the potential fire threat and its effects on HEPA filter integrity in cell ventilation at the Oak Ridge National Laboratory, Building 7920, 19:6136 (R;US)
Fuel fire test results for RX-08-FK in a toroidal composite vessel, 19:7371 (R;US)
High damage threshold anti-reflectors by physical vapor deposited amorphous fluoropolymer, 19:7085 (R;US)
Initial ultraviolet-B intensity data at Lawrence Livermore National Laboratory, 19:7513 (R;US)
Introduction to the nuclear criticality safety evaluation of facility X-705, Portsmouth Gaseous Diffusion Plant, 19:7386 (R;US)
Lawrence Livermore National Laboratory safeguards and security quarterly progress report to the US Department of Energy: Quarter ending September 30, 1993, 19:6313 (R;US)
Livermore Computing Production Control System, 3.0: Product description: Revision 1, 19:7949 (R;US)
Modeling of pulverulent ceramic jets with CALE: Final report, 19:7181 (R;US)
Modelling atmospheric turbulence effects on ground-based telescope systems, 19:7359 (R;US)
Nanoscale plasticity in silica glass, 19:7041 (R;US)
Novel methods of copper vapor laser excitation, 19:7188 (R;US)
Nuclear criticality safety evaluation of Spray Booth Operations in X-705, Portsmouth Gaseous Diffusion Plant, 19:6287 (R;US)
Numerical procedure for planetary wave solution, 19:7522 (R;US)
Numerical simulations of interfacial debonding in ductile-phase reinforced intermetallic matrix composites, 19:7084 (R;US)
O-shell emission of uranium in a high temperature, low density plasma, 19:7843 (R;US)
Observation of stimulated emission from an MBE grown GaN film on sapphire, 19:7196 (R;US)
Optimization of the National Ignition Facility primary shield design, 19:7898 (R;US)
PEP-II: An asymmetric B factory: Conceptual design report, 19:7297 (R;US)
Possible differences in biological availability of isotopes of plutonium: Report of a workshop, 19:7459 (R;US)
Practical aspects of shielding high-energy particle accelerators, 19:7508 (R;US)
Probabilistic cost-benefit analysis of enhanced safety features for strategic nuclear weapons at a representative location, 19:7382 (R;US)
Radiological analysis of the National Ignition Facility, 19:7425 (R;US)
Risk management at Lawrence Livermore National Laboratory, 19:7903 (R;US)
Risk-based prioritization: A comparison of approaches, 19:7904 (R;US)
Scaling 2XIIB impurity radiation to BPNS, 19:7896 (R;US)
Seismic monitoring at The Geysers, 19:6501 (R;US)
Simulation of the Indian and East-Asian summer monsoon in the ECMWF model: Sensitivity to horizontal resolution, 19:7521 (R;US)
Site characterization and hazard assessment criteria for natural phenomena hazards at DOE sites, 19:6288 (R;US)
Software reliability and safety in nuclear reactor protection systems, 19:6731 (R;US)
Summary of studies on filter clogging, 19:7156 (R;US)

The addition of molecular oxygen to hydroperoxy-propyl radicals, 19:7137 (R;US)
The AFTAC model integration project: An annual progress report: Revision 1, 19:7422 (R;US)
The effect of elevation data representation on nocturnal drainage wind simulations, 19:7523 (R;US)
The High Performance Storage System, 19:7950 (R;US)
The High Performance Storage System: Revision 1, 19:7951 (R;US)
The impact of repository heat on thermo-hydrological performance at Yucca Mountain, 19:6201 (R;US)
The integration of human factors into the risk assessment of a nuclear device arming and firing system, 19:7383 (R;US)
The PEP-II project: Design status and R&D results, 19:7296 (R;US)
The technical basis for air pathway assessment of resuspended radioactive aerosols: LLNL experiences at seven sites around the world, 19:7423 (R;US)
Title I wind/tornado design guidelines for new production reactors, 19:6743 (R;US)
Travel to Italy for Workshop on Plasma Edge Theory in Fusion Devices: Foreign trip report, October 1–10, 1993, 19:7869 (R;US)
Two dimensional self-consistent fluid simulation of rf inductive sources, 19:7559 (R;US)
Uncertainties in the characterization of the thermal environment of a solid rocket propellant fire, 19:7136 (R;US)
Unlike pair interactions in N_2-H_2O mixtures, 19:7372 (R;US)
WESVA: A decision aid for comparing warhead advanced surety R&D options, 19:7381 (R;US)

LDP Associates (United States)
Advanced direct liquefaction concepts for PETC generic units: Quarterly technical progress report, April 1993–June 1993, 19:6032 (R;US)

Lehigh Univ., Bethlehem, PA (United States)
Ethanol synthesis and water gas shift over bifunctional sulfide catalysts: Technical progress report, June 1993–August 1993, 19:6458 (R;US)

Lehigh Univ., Bethlehem, PA (United States). Dept. of Chemistry
Selective solvent absorption in coal conversion: Quarterly report, July 1, 1992–September 30, 1992, 19:6031 (R;US)

Linkoeping Univ. (Sweden). Dept. of Electrical Engineering
Data Quality, 19:7956 (R;SE)

Linkoeping Univ. (Sweden). Dept. of Mathematics
A production-transportation problem with stochastic demand and concave production costs, 19:6861 (R;SE)

Linkoeping Univ. (Sweden). Dept. of Mechanical Engineering
Dynamics of composite rotors, with special reference to influence of imperfections and internal damping, 19:6582 (R;SE)

Little (Arthur D.), Inc., Cambridge, MA (United States)
Commercialization of coal diesel engines for non-utility and export power markets, 19:6918 (R;US)

Lomax Exploration Co., Salt Lake City, UT (United States)
Green River Formation Water Flood Demonstration Project, Uinta Basin, Utah: Quarterly technical progress report, July 1, 1993–September 30, 1993, 19:6085 (R;US)

Los Alamos National Lab., NM (United States)
(j,0) $\oplus$ (0,j) representation space: Majorana-like construct, 19:7536 (R;US)
(j,0)$\oplus$(0,j) representation space: Dirac-like construct, 19:7593 (R;US)
A photon detector system for the search for the rare muon decay $\mu \rightarrow e\gamma$, 19:7644 (R;US)
A procedure for assessing uncertainty in models, 19:6683 (R;US)
A space-based classification system for RF transients, 19:7549 (R;US)
A survey of open problems in symplectic integration, 19:7930 (R;US)
Acceleration in astrophysics, 19:7550 (R;US)
Adaptive optimization and control using neural networks, 19:7931 (R;US)
Advances in gamma-ray field instrumentation at Los Alamos, 19:6307 (R;US)
An unavailability model for errors made during surveillance testing, 19:6312 (R;US)
Application of sidestream recycle to the separation of hydrogen isotopes by cryogenic distillation, 19:7883 (R;US)
Applications of portable gamma-ray technologies to quantitative measurements in-situ, 19:6310 (R;US)
Atomic processes in Inertial Electrostatic Confinement (IEC) devices, 19:7885 (R;US)
B-jet tagging using the GEM central tracker, 19:7323 (R;US)
Back-reaction beyond the mean field approximation, 19:7607 (R;US)
BATSE burst location accuracy and constraints on the fraction of repeating GRB sources, 19:7551 (R;US)
Case studies of corrosion of mixed waste and transuranic waste drums, 19:6974 (R;US)
Cavitation and two-phase flow characteristics of SRPR (Savannah River Plant Reactor) pump: Final report, 19:6721 (R;US)
Characterization of structure and mechanical properties of $MoSi_2$-SiC nanolayer composites, 19:7059 (R;US)
Characterization of the nitrate complexes of Pu(IV) using absorption spectroscopy, ^{15}N NMR, and EXAFS, 19:7133 (R;US)
Chemical composition of Hanford Tank SY-102, 19:6170 (R;US)
Classification of superficial lesions of the eye with an optical biopsy system: First trials with the Los Alamos instrument, 19:7514 (R;US)
Collaborative computing for gene mapping, 19:7490 (R;US)
Comparison of accelerator-based with reactor-based waste transmutation schemes, 19:6175 (R;US)
Comparison of three gamma-ray isotopic determination codes: FRAM, MGA, and TRIFID, 19:6308 (R;US)
Compression of fingerprint data using the wavelet vector quantization image compression algorithm: 1992 progress report, 19:7928 (R;US)
Continuous remote/unattended monitoring for safeguards data collection systems, 19:6306 (R;US)
Corrosion resistant coatings from conducting polymers, 19:6973 (R;US)
Cryogenic adsorption of low-concentration hydrogen on charcoal, 5A molecular sieve, sodalite, ZSM-5 and Wessalith DAY, 19:7882 (R;US)
Damage growth in $MgAl_2O_4$ crystals by Xe ion irradiations, 19:7032 (R;US)
Data acquisition system developed for the resonance absorption project, 19:7328 (R;US)
Data on parity violation in the compound nucleus and its interpretation, 19:7592 (R;US)
DELTAE: Design Environment for Low-Amplitude Thermoacoustic Engines, 19:7916 (CM;US)
Design and performance of the UO_2 fuel for the Topaz-II reactor, 19:6634 (R;US)
Development of methods for evaluating options for improving air quality in Santiago, Chile and its environs: Final report, 19:7409 (R;US)
Directional measurements for sources of fission neutrons, 19:7321 (R;US)
DMSP satellites as gamma-ray burst detectors, 19:7552 (R;US)
Elastic scattering of pions from tritium and ^3He in the backward hemisphere in the region of the $\Delta_{33}(1232)$ resonance, 19:7736 (R;US)
Empirical Bayes estimation of the average reliability of nuclear power plant emergency diesel generators to load-run upon demand, 19:6657 (R;US)
Estimators for the Cauchy distribution, 19:7932 (R;US)
Fabrication and testing of plasma-spray formed $MoSi_2$ and $MoSi_2$ composite tubes, 19:7031 (R;US)
Failures to model the development of a cube texture during the high temperature compression of Al-Mg alloys, 19:6975 (R;US)
Free-standing superconductive articles, 19:7791 (PA;US)
Gamma-ray bursts from the accretion of solid bodies onto high-velocity Galactic neutron stars, 19:7553 (R;US)
Genetic algorithms for minimal source reconstructions, 19:7489 (R;US)
Geomorphology of plutonium in the Northern Rio Grande, 19:7477 (R;US)
Geothermal energy production from hot dry rock: Operational testing at the Fenton Hill, New Mexico HDR Test Facility, 19:6529 (R;US)

Global atmospheric and ocean modeling on the connection machine, 19:7410 (R;US)
Hanford high level waste (HLW) tank mixer pump safe operating envelope reliability assessment, 19:6173 (R;US)
High-value use of weapons-plutonium by burning in molten salt accelerator-driven subcritical systems or reactors, 19:6172 (R;US)
Improved implementations of two gamma-ray measurement methods, 19:6309 (R;US)
Insensitive explosive, 19:7368 (PA;US)
Is probability of frequency too narrow?, 19:7929 (R;US)
Large Eddy Simulations using Lattice Boltzmann algorithms: Final report, 19:7295 (R;US)
Life safety and seismic hazards: Selecting buildings for review and questions still to answer, 19:6276 (R;US)
Long-Range Alpha Detector (LRAD) sensitivity to beta contamination and soil moisture, 19:7329 (R;US)
Mach reflection of spherical detonation waves, 19:7367 (R;US)
Measurement of unsaturated hydraulic conductivity and chemical transport in Yucca Mountain Tuff: Milestone Report 3044-WBS1.2.3.4.1.4.1, 19:6237 (R;US)
Metastable phases in the aluminum-germanium alloy system: Synthesis by mechanical alloying and pressure induced transformations, 19:6971 (R;US)
Microwave assisted chemical vapor infiltration, 19:7060 (R;US)
Modeling turbulence in flows with a strong rotational component, 19:7178 (R;US)
Modelling the mass migration phenomena in partially frozen heat pipes, 19:6633 (R;US)
Moderator materials and neutronic performance, 19:6322 (R;US)
Multisphere neutron spectroscopy measurements at the Los Alamos National Laboratory Plutonium Facility, 19:7504 (R;US)
Munitions classification using an Acoustic Resonance Spectroscopic technique, 19:6925 (R;US)
MUSIC for localization of thunderstorm cells, 19:7519 (R;US)
New equation of state for stainless steel 347, 19:6972 (R;US)
Non-invasive determination of waste drum pressurization by Acoustic Resonance Spectroscopy, 19:6176 (R;US)
Object Tracking and Designation (OTD): Final report, Phase 2, 19:7384 (R;US)
Pattern recognition in the GEM central tracker at luminosity of 10^{33} $cm^{-2}s^{-1}$, 19:7324 (R;US)
Performance of a 14-MeV neutron generator as an in situ calibration source for TFTR, 19:7884 (R;US)
Pion single charge exchange in three body nuclei at intermediate energies, 19:7737 (R;US)
Practical problems in aggregating expert opinions, 19:7900 (R;US)
Probabilistic risk assessment of disassembly procedures, 19:6275 (R;US)
Production rates of terrestrial in-situ-produced cosmogenic nuclides, 19:7554 (R;US)
Prototype explosives detection system based on nuclear resonance absorption in nitrogen, 19:7326 (R;US)
PSA results for Hanford high level waste Tank 101-SY, 19:6174 (R;US)
Reaction $\pi N \rightarrow \pi\pi N$ near threshold, 19:7645 (R;US)
Recovery of hydrogen from impurities using a palladium membrane reactor, 19:7881 (R;US)
Relativistic collision rate calculations for electron-air interactions, 19:7748 (R;US)
Research reactor fork users manual, 19:7322 (R;US)
Risk management at Los Alamos National Laboratory, 19:6277 (R;US)
Safeguards applications of pattern recognition and neural networks, 19:6311 (R;US)
SESAME equation of state number 8020: Polyetheretherketone (PEEK), 19:7057 (R;US)
Simulation of the GEM silicon central tracker using GEANT, 19:7325 (R;US)
Simulations of terrestrial in-situ cosmogenic-nuclide production, 19:7555 (R;US)
SPECTRUM analysis of multispectral imagery in conjunction with wavelet/KLT data compression, 19:7518 (R;US)
Stabilization of polyaniline solutions, 19:7058 (R;US)
Superconductive articles, 19:7792 (PA;US)
Survey and evaluation of aging risk assessment methods and applications, 19:6722 (R;US)
Tank SY-102 remediation project: Flowsheet and conceptual design report, 19:6171 (R;US)
Technical accomplishments of the Thermionic Fuel Element Verification Program, 19:6632 (R;US)
The effects of proton beam quality on the production of gamma rays for nuclear resonance absorption in nitrogen, 19:7327 (R;US)
The fracture behavior of a CVD crystalline Si_3N_4/amorphous Si_3N_4 composite, 19:7030 (R;US)
The Nevada Test Site: An analog for a nuclear repository, 19:7450 (R;US)
The status of the solar neutrino problem, 19:7548 (R;US)

Energy conservation in Latvia, 19:6848 (RA;DK)
Issues and options analysis for rational energy management in Latvia, 19:6825 (RA;DK)
Issues and options in the energy sector in Latvia. Vol. 1: Background reports. Energy conservation in Latvia. Energy utilities and pricing, 19:6809 (R;DK)

Pacific Northwest Lab., Richland, WA (United States)
1993 International conference on nuclear waste management and environmental remediation, Prague, Czech Republic, September 5–11, 1993: Combined foreign trip report, 19:6183 (R;US)
A summary of chemical and biological testing of proposed disposal of sediment from Richmond Harbor relative to the Deep Off-Shelf Reference Area, the Bay Farm Borrow Area, and the Alcatraz Environs Reference Area, 19:7455 (R;US)
Accounting for time-varying vadose-zone water fluxes caused by infiltration caps using the MEPAS transport, exposure, and risk assessment model, 19:6190 (R;US)
An evaluation of the adequacy of vital status follow-up in the Hanford worker mortality study, 19:6280 (R;US)
An object-oriented approach to energy-economic modeling, 19:6816 (R;US)
An overview of the ASCOT program, 19:7419 (R;US)
An overview of the federal energy management toolkit, 19:6856 (R;US)
Analysis of the radical hydrogen transfer pathway for cleaving strong bonds in coal, 19:6043 (R;US)
Applicability of slug interference testing of hydraulic characterization of contaminated aquifer sites, 19:6282 (R;US)
Application of the Ferris test methods for estimating hydraulic properties near a river boundary, 19:6192 (R;US)
AREST model description, 19:6180 (R;US)
Aspects of radiation heat transfer in arrays of fixed discrete surfaces, 19:6484 (R;US)
Auxiliary feedwater system risk-based inspection guide for the South Texas Project nuclear power plant, 19:6620 (R;US)
Bench-scale synthesis of nanoscale materials, 19:7036 (R;US)
Chemi-microbial processing of waste tire rubber: A project overview, 19:6897 (R;US)
Coadunation of technologies: Cogeneration and thermal energy storage, 19:6758 (R;US)
Commercial milk distribution profiles and production locations: Hanford Environmental Dose Reconstruction Project, 19:6239 (R;US)
Comparison of dynamic analysis of a Schilling hydraulic manipulator with experimental results, 19:7148 (R;US)
Construction cost impact analysis of the U.S. Department of Energy mandatory performance standards for new federal commercial and multi-family, high-rise residential buildings, 19:6855 (R;US)
Contaminant analysis automation demonstration proposal, 19:7106 (R;US)
Control levels for residual contamination in materials considered for recycle and reuse, 19:6187 (R;US)
Conversion of Hanford site well locations to Washington coordinate system of 1983, South Zone 1991 (WCS83S), 19:7454 (R;US)
Developing a scarifier to retrieve radioactive waste from Hanford single-shell tanks, 19:6194 (R;US)
Discussions with the Soviet Union concerning environmental technologies and management policy: Foreign trip report, August 2–24, 1991, 19:6780 (R;US)
Early stages in the development of stress corrosion cracks, 19:6989 (R;US)
Effect of loading mode on the fracture toughness of a reduced activation ferritic/martensitic stainless steel, 19:7892 (R;US)
Effect of precipitate structure on hot deformation of Al-Mg-Mn alloys, 19:6996 (R;US)
Effect of temperature and recoil-energy spectra on irradiation-induced amorphization in $Ca_2La_8(SiO_4)_6O_2$, 19:7070 (R;US)
Emerging human-computer interface (HCI) design guidelines for graphical user interface (GUI), 19:7937 (R;US)
Estimate of federal relighting potential and demand for efficient lighting products, 19:6909 (R;US)
Evaluation of the Science Applications International Corporation PD-4 electronic dosimeter, 19:7341 (R;US)
Federal environmental standards of potential importance to operations and activities at US Department of Energy sites: Draft, 19:6270 (R;US)
Final report on the meteorological database, December 1944–1949: Hanford Environmental Dose Reconstruction Project, 19:7506 (R;US)
Foreign criteria and programs, 19:7342 (R;US)
Frequency-domain transfer-function identification using Chebyshev polynomials, 19:7938 (R;US)
Fundamentals of defect production, 19:7893 (R;US)
General Motors Corporation and Pacific Northwest Laboratory staff exchange: Inspection of case hardened steels and metal-matrix composites, 19:6986 (R;US)
Grain boundary chromium concentration effects on the IGSCC and IASCC of austenitic stainless steels, 19:6995 (R;US)
Hanford Environmental Dose Reconstruction Project, Quarterly report, September–November 1993, 19:7458 (R;US)
Hanford Site Environmental Data for Calendar year 1992 – Ground water, 19:6238 (R;US)
High performance computing in chemistry and massively parallel computers: A simple transition?, 19:7936 (R;US)
High sensitivity, low profile neutron detector for safeguards measurements, 19:6926 (R;US)

High-level waste qualification: Managing uncertainty, 19:6186 (R;US)
Homolytic bond dissociation energies for C-H bonds adjacent to sulfur and aromatic moieties: The effects of substituents of C-H bond strengths of the benzylic positions in coal model compounds, 19:7123 (R;US)
Impact evaluations in the industrial sector: Case studies and findings, 19:6812 (R;US)
In situ vitrification: Providing a comprehensive solution for remediation of contaminated soils, 19:6185 (R;US)
Influence of helium generation rate and temperature history on mechanical properties of model Fe-Cr-Ni alloys irradiated in FFTF at relatively low displacement rates, 19:6992 (R;US)
Integrating climate change into energy demand forecasts: A commercial sector analysis, 19:6773 (R;US)
Intrinsic signatures of polymer based fiber reinforced composite structures: An ultrasonic approach, 19:6927 (R;US)
Investigation of electric fields for low-temperature treatment of soils and liquids, 19:7456 (R;US)
Irradiation creep and swelling of the U.S. fusion heats of HT9 and 9Cr-1Mo to 208 dpa at ~400°C, 19:6991 (R;US)
Isotopic trace analysis by atomic mass spectrometry, 19:7107 (R;US)
Iterative methods for the WLS state estimation on RISC, vector, and parallel computers, 19:6827 (R;US)
Logistics modeling of future solid waste storage, treatment, and disposal, 19:6189 (R;US)
Membrane reactor/separator: A design for Bi-molecular reactant addition, 19:7124 (R;US)
MEPAS exposure model updates to meet current EPA guidance, 19:6281 (R;US)
Microstructural development in irradiated vanadium alloys, 19:7890 (R;US)
Microstructural development in low activation ferritic alloys irradiated to 200 dpa at 420°C, 19:6993 (R;US)
Modeling defect production in high energy collision cascades, 19:7891 (R;US)
Monte Carlo calculations of low background detector response, 19:7343 (R;US)
Neutron interactions and atomic recoil spectra, 19:7741 (R;US)
Neutron-induced microstructural alteration of GlidCop™ alloys at 415°C and high neutron exposure, 19:6990 (R;US)
New parameters for characterizing turbulence at a potential wind site, 19:6538 (R;US)
Oxygen reduction at a YSZ interface with cathode materials $La_{1-x}(Ca \text{ or } Sr)_xMnO_3$ or $Y_{1-x}CaMnO_3$, 19:6840 (R;US)
Plant reestablishment after soil disturbance: Effects of soils, treatment, and time, 19:7453 (R;US)
Potential high fluence response of pressure vessel internals constructed from austenitic stainless steels, 19:6988 (R;US)
Process chemistry for the pretreatment of Hanford tank wastes, 19:6184 (R;US)
Processing constraints on high-level nuclear waste glasses for Hanford Waste Vitrification Plant, 19:6188 (R;US)
Quantitative in situ uranium contaminant mapping using high-resolution gamma-ray spectrometry and beta scintillation counting, 19:6195 (R;US)
Radiation effects in beryllium used for plasma protection, 19:6994 (R;US)
Radiation hardening effects on localized deformation and stress corrosion cracking of stainless steels, 19:6987 (R;US)
Radionuclide releases to the atmosphere from Hanford Operations, 1944–1972: Hanford Environmental Dose Reconstruction Project, 19:6240 (R;US)
Radionuclide releases to the Columbia River from Hanford Operations, 1944–1971: Hanford Environmental Dose Reconstruction Project, 19:6241 (R;US)
Reaction sequences in simulated neutralized current acid waste slurry during processing with formic acid, 19:6191 (R;US)
Relationship between iron oxide phase and catalytic activity in model compound reaction studies, 19:6042 (R;US)
Relationship between swelling and irradiation creep in cold-worked PCA stainless steel irradiated to ~178 dpa at ~400°C, 19:7889 (R;US)
Simulated progress in double-beta decay, 19:7686 (R;US)
Software redesign for usability: A case study, 19:7939 (R;US)
Software requirements specification document for the AREST code development, 19:6182 (R;US)
Solid Waste Projection Model: Database User's Guide: Version 1.4, 19:6181 (R;US)
Staff exchange with Chemical Waste Management: Final project report, 19:6794 (R;US)
Status of international environmental remediation activities: A report from the Prague conference, 19:6193 (R;US)
Strategic planning: Identifying organization information requirements, 19:7959 (R;US)
Structure and properties of composites synthesized in situ using solid state displacement reactions, 19:7035 (R;US)
Structure and properties of intermetallic composites synthesized in situ using solid state displacement reactions, 19:7071 (R;US)

Transient radiation-induced absorption in the materials for a GSGG laser, 19:7078 (R;US)
Travel to Europe concerning beryllium plasma spray research: Foreign trip report, June 1–9, 1991, 19:7859 (R;US)
Travel to France to discuss with the Tore Supra staff the repair and reinstallation of the Phase III Outboard Limiter: Foreign trip report, September 19–25, 1993, 19:7866 (R;US)
Travel to France, Germany and the United Kingdom to participate in fusion technology program reviews and planning meetings: Foreign trip report, October 26–November 6, 1991, 19:7855 (R;US)
Travel to Germany and the UK for meetings on storage battery research: Foreign trip report, September 26–October 5, 1993, 19:6763 (R;US)
Travel to Germany for the International Symposium on Metal/Ceramic Interfaces: Foreign trip report, June 28–July 6, 1991, 19:6963 (R;US)
Travel to Germany, France, and the UK to review battery technologies: Foreign trip report, July 6–20, 1991, 19:6761 (R;US)
Travel to Granada, Spain for discussions on materials that exhibit complex relaxations: Foreign trip report, June 21–17, 1993, 19:7053 (R;US)
Travel to Japan for conference on Battery Energy Storage for electric utilities: Foreign trip report, March 8–23, 1991, 19:6762 (R;US)
Travel to Japan for meeting on drivers for Inertial Confinement Fusion: Foreign trip report, April 13–21, 1991, 19:7858 (R;US)
Travel to Japan for symposium on boron, borides, and related compounds: Foreign trip report, August 20–September 15, 1993, 19:7026 (R;US)
Travel to Japan to evaluate photovoltaic developments in Japan, Australia, and Europe: Foreign trip report, November 16–26, 1993, 19:6479 (R;US)
Travel to Osaka, Japan for the International Atomic Energy Agency Technical Committee Meeting on drivers for inertial confinement fusion in Osaka, Japan: Foreign trip report, April 13–21, 1991, 19:7856 (R;US)
Travel to Russia and Germany for meetings on computer modeling of weapons and impact physics: Foreign trip report, September 4–21, 1993, 19:7373 (R;US)
Travel to Russia for coordination meetings for the Cooperative Program in Surety Technologies: Foreign trip report, July 3–15, 1993, 19:6264 (R;US)
Travel to Russia for research on vacuum ultraviolet spectra of plasma generators for Tokamak disruption simulations: Foreign trip report, September 12–October 15, 1993, 19:7821 (R;US)
Travel to Scotland and Switzerland to participate in the 5th International Conference on Hopping and Related Phenomena: Foreign trip report, August 29, 1993–September 11, 1993, 19:7753 (R;US)
User's guide for the frequency domain algorithms in the LIFE2 fatigue analysis code, 19:6566 (R;US)
Uses of zero-one sampling in probabilistic risk assessment, 19:6599 (R;US)
Variation of stability constants of thorium and uranium oxalate complexes with ionic strength, 19:7127 (R;US)
Vugraph presentations of the fourth DOE Industry/University/Lab Forum on Robotics for Environmental Restoration and Waste Management, 19:6286 (R;US)
XSOR codes users manual, 19:6725 (R;US)

Sandia National Labs., Livermore, CA (United States)
A materials compatibility study in FM-1, a liquid component of a paste extrudable explosive, 19:7004 (R;US)
Fuel fire test results for RX-08-FK in a toroidal composite vessel, 19:7371 (R;US)
Molecular beam mass spectrometry studies of the chemical vapor deposition of diamond, 19:7080 (R;US)
Phase stability in the Cd-Mg system, 19:7005 (R;US)
Site environmental report for 1992, 19:6243 (R;US)
The effect of production temperature on the retention of tritium in vapor deposited beta silicon carbide, 19:6623 (R;US)
Travel to Germany for ITER task negotiations: Foreign trip report, July 11–17, 1993, 19:7861 (R;US)
Travel to Greece and Germany for meetings on the electronic structure of solids and complex systems: Foreign trip report, September 16–October 1, 1993, 19:7751 (R;US)
Travel to USSR for symposium on Coherent Raman Spectroscopy: Foreign trip report, September 15–28, 1990, 19:7094 (R;US)

Science Applications International Corp., Albuquerque, NM (United States)
XSOR codes users manual, 19:6725 (R;US)

Shawater Ltd., Bath (United Kingdom)
Bristol cylinder wave energy device; consultancy to review of wave energy, 19:6537 (R;GB)

Siemens AG Unternehmensbereich KWU, Erlangen (Germany). Abt. Brennelement-Technologie
Upgrading of aerosol generators for use at Cadarache (CEA): Final report, 19:6742 (R;DE;In German)

Siemens Solar Industries, Camarillo, CA (United States)
PV Cz silicon manufacturing technology improvements: Annual subcontract report, 1 April 1992–31 March 1993, 19:6472 (R;US)
Research on high-efficiency, large-area, $CuInSe_2$-based thin- film modules: Annual subcontract report, 1 May 1992–15 Aug 1993, 19:6476 (R;US)

Smith and Harroff, Inc., Alexandria, VA (United States)
Early Site Permit Demonstration Program: Recommendations for communication activities and public participation in the Early Site Permit Demonstration Program, 19:6642 (R;US)

Soft Top-Gruppen ApS, Farsoe (Denmark)
Further development of Soft-Top for the accumulation of biogas from storage tanks, 19:6448 (R;DK;In Danish)

Solar Energy Research Inst., Golden, CO (United States)
Travel to Hungary, Poland, and Germany for investigation of research and materials in photovoltaic activities: Foreign trip report, May 4–20, 1991, 19:7052 (R;US)
Travel to New Zealand for symposium on wood and pulping chemistry: Foreign trip report, April 29–May 9, 1991, 19:6363 (R;US)

Solar Turbines, Inc., San Diego, CA (United States). Research Dept.
Gas fired advanced turbine system: Phase 1, System scoping and feasibility studies, 19:6572 (R;US)

Solarex Corp., Newtown, PA (United States). Thin Film Div.
Large-area triple-junction a-Si alloy production scale up: Annual subcontract report, 17 March 1992–18 March 1993, 19:6474 (R;US)

South Carolina Energy Research and Development Center, Clemson, SC (United States)
Industry/University Consortium for ATS research, 19:6576 (R;US)

Southeastern Universities Research Association, Inc., Newport News, VA (United States). Continuous Electron Beam Accelerator Facility
Travel to the first congress of the Institute of Physics with topics including the vacuum, plasma, spectroscopy, and physics in medicine topical groups: Foreign trip report, April 17–23, 1993, 19:7524 (R;US)

Southern California Edison Co., Rosemead, CA (United States)
Performance of the Southern California Edison Company Stirling dish, 19:6478 (R;US)

Southern California Gas Co., Los Angeles, CA (United States)
An economic feasibility analysis of distributed electric power generation based upon the natural gas-fired fuel cell: a model of a central utility plant., 19:6836 (R;US)
An economic feasibility analysis of distributed electric power generation based upon the Natural Gas-Fired Fuel Cell: a model of the operations cost., 19:6837 (R;US)

Southern Co. Services, Inc., Birmingham, AL (United States)
Engineering development of selective agglomeration: Trace element removal study, 19:6011 (R;US)
Innovative Clean Coal Technology (ICCT): 500 MW demonstration of advanced wall-fired combustion techniques for the reduction of nitrogen oxide (NO_x) emissions from coal-fired boilers: Technical progress report: First quarter 1993, 19:6586 (R;US)
Performance and operating results from the demonstration of advanced combustion techniques for wall-fired boilers, 19:6585 (R;US)

Southern Electric International, Inc., Atlanta, GA (United States)
Early Site Permit Demonstration Program: Recommendations for communication activities and public participation in the Early Site Permit Demonstration Program, 19:6642 (R;US)

Space Power, Inc., San Jose, CA (United States)
SPACE-R thermionic space nuclear power system: Design and technology demonstration: Task 1.5.6, Moderator containment laboratory experiment test plant (CDRL No. 5), 19:6630 (R;US)
SPACE-R thermionic space nuclear power system design and technology demonstration: Test plans for INERTEK experimental tasks: CDRL No. 5 and No. 9, 19:6631 (R;US)

Spauschus Associates, Inc., Stockbridge, GA (United States)
Solubility, viscosity and density of refrigerant/lubricant mixtures: Quarterly technical progress report, 1 July 1993–30 September 1993, 19:7049 (R;US)

Springborn Labs., Inc., Enfield, CT (United States)
Semiannual technical progress report: Advanced development of PV encapsulants: Annual subcontract report, 1 January 1993–30 June 1993, 19:6470 (R;US)

SRI International, Menlo Park, CA (United States). Chemistry Lab.
Fundamental studies of coal liquefaction: Quarterly report No. 7, April 1–July 1, 1993, 19:6034 (R;US)

Stanford Linear Accelerator Center, Menlo Park, CA (United States)
A Full-Acceptance Detector (FAD) for the SSC: An Overview, 19:7347 (R;US)
A measurement of $R_b = \Gamma(Z^0 \rightarrow b\bar{b})/\Gamma(Z^0 \rightarrow \text{hadrons})$ at SLD, 19:7650 (R;US)
A measurement of the LMP effect, 19:7652 (R;US)
A method of obtaining parasitic e^+ or e^- beams during SLAC linear collider operation, 19:7285 (R;US)
A study of jet handedness at the Z^0 resonance, 19:7651 (R;US)
A study of LPM suppression of bremsstrahlung at 25 GeV, 19:7649 (R;US)
A test accelerator for the next linear collider, 19:7209 (R;US)
An "NLC-style" short bunch length compressor in the SLAC linac, 19:7280 (R;US)
Beamstrahlung monitors at SLC, 19:7276 (R;US)
CsI electromagnetic calorimeter development for a low or medium energy e^+e^- collider, 19:7348 (R;US)
Design and performance of the SLD Vertex Detector, a 120 Mpixel tracking system, 19:7344 (R;US)
Determination of the neutron spin-structure function, 19:7666 (R;US)
e^+e^- collisions at the SLC–the left-right asymmetry, 19:7213 (R;US)
Energy distribution of the leptons in top decay to charged Higgs, 19:7669 (R;US)
Energy efficient deQing for SLAC Klystron Modulators, 19:7282 (R;US)
Experimental studies of the charge limit phenomenon in GaAs photocathodes, 19:7284 (R;US)
Fast ion chambers for SLC, 19:7283 (R;US)
Gamma Large Area Silicon Telescope (GLAST): Applying silicon strip detector technology to the detection of gamma rays in space, 19:7346 (R;US)
High energy parton-parton elastic scattering in QCD, 19:7667 (R;US)
Induced beam oscillations from quadrupole vibrations in the SLC linac, 19:7225 (R;US)
Introduction to impedance for short relativistic bunches, 19:7224 (R;US)
IR mechanical design B factories, 19:7206 (R;US)
Length monitor for 1 mm SLC bunches, 19:7281 (R;US)
Linac Coherent Light Source (LCLS) at 2–4 nm using the SLAC linac, 19:7210 (R;US)
Linear collider development at SLAC, 19:7212 (R;US)
Machine Protection System algorithm compiler and simulator, 19:7208 (R;US)
Measured optimum BNS damping configuration of the SLC linac, 19:7226 (R;US)
Obtaining slow beam spills at the SSC collider, 19:7228 (R;US)
Overview of the Final Focus Test Beam alignment system, 19:7279 (R;US)
PEP-II: An asymmetric B factory: Conceptual design report, 19:7297 (R;US)
Performance of a silicon CCD pixel vertex detector in the SLD, 19:7345 (R;US)
Results on structure functions from fixed-target experiments, 19:7668 (R;US)
Simulations of low energy e^+e^- particle backgrounds, 19:7227 (R;US)
SLC and SLD: Experimental experience with a linear collider, 19:7211 (R;US)
Status of the Stanford Linear Collider, 19:7207 (R;US)
Study of non-linear photoemission effects in III-V semiconductors, 19:7278 (R;US)
Survey and alignment of high energy physics accelerators and transport lines, 19:7277 (R;US)
Tests of the Electroweak Standard Model at high energies ($\sqrt{s}$ > 50 GeV), 19:7608 (R;US)
The $\Delta(1232)$ resonance transition form factor, 19:7665 (R;US)
The CDF Silicon Vertex Detector, 19:7316 (R;US)
The PEP-II project: Design status and R&D results, 19:7296 (R;US)

Stanford Univ., CA (United States). High Temperature Gasdynamics Lab.
Char particle fragmentation and its effect on unburned carbon during pulverized coal combustion: Quarterly report, July 1, 1993–September 30, 1993, 19:6076 (R;US)

State Univ. of New York, Albany, NY (United States). Atmospheric Sciences Research Center
The automated rotating shadowband spectroradiometer, 19:7352 (R;US)

State Univ. of New York, Binghamton, NY (United States). Dept. of Physics
Asymptotic coherence of gluons and of q-bosons, 19:7597 (R;US)

State Univ. of New York, Buffalo, NY (United States). Dept. of Chemistry
[Group transfer and electron transfer reactions of organometallic complexes]: Summary of research accomplished in 1993, 19:7114 (R;US)

State Univ. of New York, Stony Brook, NY (United States)
High baryon density from relativistic heavy ion collisions, 19:7690 (R;US)

State Univ. of New York, Stony Brook, NY (United States). Dept. of Physics
X-ray holographic microscopy using the atomic-force microscope, 19:7334 (R;US)

Statens Jordbrugstekniske Forsoeg, Horsens (Denmark)
Control of climate and production in pig confinement buildings, 19:6857 (R;DK;In Danish)

Statni Urad pro Jadernou Bezpecnost, Prague (Czech Republic)
Manual of quality assurance programme auditing, 19:6638 (I;CZ;In Czech)
Nuclear Safety Review 1991, 19:6594 (I;CZ;In Czech)

Stiftelsen foer Vaermeteknisk Forskning, Stockholm (Sweden)
Degassing and desalination with sulfite dosage and reverse osmosis, 19:7155 (R;SE;In Swedish)
Erosion testing of CRC 262, 19:7006 (R;SE;In Swedish)

Stockholm Environment Inst. (Sweden)
Final report on dust monitoring near Kellingley coal mine, North Yorkshire, 19:6061 (R;SE)

Stoller (S.M.) Corp., Oak Ridge, TN (United States)
Annual summary report of the Surveillance and Maintenance activities at Oak Ridge National Laboratory for FY 1993, 19:6178 (R;US)

Strategic Defense Initiative Organization, Washington, DC (United States)
Object Tracking and Designation (OTD): Final report, Phase 2, 19:7384 (R;US)

Student Pugwash U.S.A., Washington, DC (United States)
Visions for a sustainable world: A conference on science, technology and social responsibility: Conference report, 19:6768 (R;US)

Stuttgart Univ. (Germany). Inst. fuer Kernenergetik und Energiesysteme
Modeling of the deposition processes during dew formation in complex structures: Contribution to EUROTRAC subproject BIATEX. Final report, 19:7407 (R;DE;In German)
The European source term code ESTER - basic ideas and tools for coupling of ATHLET and ESTER: Final report. Preparing the coupling of ATHLET and ESTER, 19:6720 (R;DE;In German)

Superconducting Super Collider Lab., Dallas, TX (United States)
Beam line error analysis, position correction, and graphic processing, 19:7229 (R;US)
Development of accelerator radiation protection at the SSC, 19:7288 (R;US)
Interstrand resistance of selected sections of DCA312, 19:7286 (R;US)
Real-time tracking with a 3D-Flow processor array, 19:7349 (R;US)
SDC tracking capabilities for B physics, 19:7350 (R;US)
Secondary particle in background levels and effects on detectors at future hadron colliders, 19:7287 (R;US)

Surtek, Inc., Golden, CO (United States)
Investigation of oil recovery improvement by coupling an interfacial tension agent and a mobility control agent in light oil reservoirs: Technical progress report, July–September 1993, 19:6084 (R;US)

Swedish Competition Authority, Stockholm (Sweden)
Anti-trust laws and the electricity market, 19:6753 (R;SE;In Swedish)

Swedish Environmental Research Inst., Goeteborg (Sweden)
Ammonia emissions from two fertilized wheat fields, 19:7408 (R;SE)

Swedish Environmental Research Inst., Stockholm (Sweden)
Life cycle assessments and eutrophication: A concept for calculation of the potential effects of nitrogen and phosphorous, 19:7476 (R;SE)

Swedish Inst. for Metals Research, Stockholm (Sweden)
Grindability of alumina fibre reinforced aluminium-alloy matrix composite material, 19:7068 (R;SE)

Swedish National Board for Industrial and Technical Development (NUTEK), Stockholm (Sweden)
Advanced electric-car batteries: Testing, 19:6764 (R;SE;In Swedish)
Catalytic reduction of NO_x, 19:6059 (R;SE;In Swedish)
Displacement expanders for small scale cogeneration, 19:6583 (R;SE)
Exhaust gas emissions from sea transportation, 19:7418 (R;SE;In Swedish)
Grindability of alumina fibre reinforced aluminium-alloy matrix composite material, 19:7068 (R;SE)
Kalina cycles for power generation from industrial waste heat, 19:6896 (R;SE)
LDA measurements of velocities and turbulence in a bluff body stabilized flame, 19:6118 (R;SE)
Mechanical properties of forged 10.5% Cr steels tested within cost 501, round 2, WP3 - final report projects 3S1, 19:6983 (R;SE)
Quality in heat treatment - Analysis of the cooling process and testing of PC-based computer programs for hardening, 19:6984 (R;SE;In Swedish)
Research and development. Forward look and proposals for 1993-96, 19:6802 (R;SE)
Stensund aquaculture - ecological technique for waste water treatment, 19:7480 (R;SE;In Swedish)
Strategic storage of petroleum products, 19:6112 (R;SE;In Swedish)
System study of externally fired gas turbines in different applications, 19:6425 (R;SE;In Swedish)
Test with combined electric, diesel and wind propulsion of a small fishing boat. Continued testing of electric traction, 19:6863 (R;SE;In Swedish)

Swedish National Testing and Research Inst., Boraas (Sweden)
Data bases and specifications for solar collector materials, 19:6492 (R;SE;In Swedish)
Improvement in electrical efficiency and indoor climate in hospitals - Boraas Hospital, 19:6860 (R;SE;In Swedish)
Indoor air quality in airtight swedish dwellings: A follow-up study of 44 single-family houses built in 1982-89, 19:6858 (R;SE;In Swedish)
Loose-fill insulation - Measurement of the thermal resistance, 19:6859 (R;SE;In Swedish)
Quality and durability of solar collectors in Sweden: Convection barriers of FEP-film - damage investigation, 19:6493 (R;SE;In Swedish)
Solar energy in China, 19:6465 (R;SE)

Swedish Transport Research Board, Stockholm (Sweden)
Alternative intersection design. A possible way of reducing air pollutant emissions from road and street traffic, 19:6866 (R;SE)
Exhaust gas emissions from sea transportation, 19:7418 (R;SE;In Swedish)

TAP 3: Training Program Support Manual, 19:7899 (R;US)

Travel to French nuclear facilities to identify innovative technologies and operating practices for waste management: Foreign trip report, June 28–July 5, 1991, 19:6149 (R;US)
Travel to Japan to participate in a series of fact finding meetings and facility tours in Japan, to explore International Technologies that can be applied to US cleanup efforts: Foreign trip report, November 3–15, 1990, 19:6150 (R;US)
Travel to Russia to investigate Tomsk-7 explosion: Foreign trip report, June 18–29, 1993, 19:6132 (R;US)
Travel to Thailand to explore US electric industry services: Foreign trip report, May 13–20, 1992, 19:6824 (R;US)
Travel to the Netherlands for the International Workshop on CO_2 and the Biosphere: Foreign trip report, November 13–22, 1991, 19:7398 (R;US)
White House Conference on Global Climate Change, 19:7389 (R;US)

Utah Univ., Salt Lake City, UT (United States)
New concept for coal wettability evaluation and modulation: Technical progress report, July 1, 1993–September 30, 1993, 19:6015 (R;US)

Utah Univ., Salt Lake City, UT (United States). Dept. of Meteorology
Cloud and aerosol characterization for the ARM central facility: Multiple remote sensor techniques development: Final technical report, 19:7394 (R;US)

UTD, Inc., Newington, VA (United States)
Innovative directional and position specific sampling technique: Phase I: Final report, July 28, 1992–April 28, 1993, 19:7436 (R;US)

V

Vanderbilt Univ., Nashville, TN (United States)
Nuclear structure at particle drip lines, 19:7674 (R;US)

Virginia Polytechnic Inst. and State Univ., Blacksburg, VA (United States). Dept. of Mining and Minerals Engineering
Studies of incipient oxidation of coal-pyrite for improved pyrite rejection: Third quarterly technical progress report, April 1, 1993–June 30, 1993, 19:6016 (R;US)

Virginia Univ., Charlottesville, VA (United States). Dept. of Mechanical, Aerospace and Nuclear Engineering
Participation in the United States Department of Energy University Reactor Instrumentation Program: Final report, September 1990–August 1993, 19:6689 (R;US)

Vortec Corp., Collegeville, PA (United States)
Development of a coal-fired combustion system for industrial process heating applications: Quarterly technical progress report, January 1993–March 1993, 19:7145 (R;US)

W

Washington State Univ., Richland, WA (United States)
Influence of helium generation rate and temperature history on mechanical properties of model Fe-Cr-Ni alloys irradiated in FFTF at relatively low displacement rates, 19:6992 (R;US)

Washington Univ., Seattle, WA (United States). Center for Quantitative Science
Juvenile passage program: A plan for estimating smolt travel time and survival in the Snake and Columbia Rivers, 19:7482 (R;US)

Washington Univ., Seattle, WA (United States). Dept. of Mechanical Engineering
Suppression of fine ash formation in pulverized coal flames: Quarterly technical progress report No. 4, July 1, 1993–September 30, 1993, 19:6077 (R;US)

Washington Univ., Seattle, WA (United States). Dept. of Physics
Collapse of flux tubes, 19:7600 (R;US)
Color transparency, 19:7712 (R;US)
The nucleon-nucleon potential in the chromodielectric soliton model, 19:7599 (R;US)

Washington Univ., Seattle, WA (United States). Nuclear Physics Lab.
Shape changes and isospin purity in highly excited light mass nuclei, 19:7714 (R;US)

Washington Univ., St. Louis, MO (United States)
Studies of complex fragment emission in heavy ion reactions: Progress report, January 1, 1993–September 15, 1993, 19:7707 (R;US)

Washington Univ., St. Louis, MO (United States). Dept. of Chemistry
Investigations of nuclear structure and nuclear reactions induced by complex projectiles: Progress report for the period September 1, 1992–August 31, 1993, 19:7677 (R;US)

Western Research Inst., Laramie, WY (United States)
The characterization of petroleum residua, 19:6113 (R;US)

Westinghouse Electric Corp., Carlsbad, NM (United States). Waste Isolation Div.
Waste Isolation Pilot Plant, Land Management Plan, 19:6156 (R;US)

Westinghouse Electric Corp., Orlando, FL (United States)
Interface between a gas turbine and PFBC, 19:6573 (R;US)

Westinghouse Electric Corp., Pittsburgh, PA (United States). Science and Technology Center
Integrated Low Emissions Cleanup system for direct coal fueled turbines, 19:6020 (R;US)

Westinghouse Electric Corp., West Mifflin, PA (United States). Bettis Atomic Power Lab.
An experimental study on the effects of compressive stress on the fatigue crack growth of low-alloy steel, 19:7007 (R;US)
FLASH predictions of the MB-2 steam line break tests, 19:6744 (R;US)

Westinghouse Environmental Management Co. of Ohio, Cincinnati, OH (United States). Fernald Environmental Management Project
Project processes integration: An evaluation of legal and DOE requirements on project activities, 19:6272 (R;US)

Westinghouse Hanford Co., Richland, WA (United States)
A brief history of the PUREX and UO_3 facilities, 19:6121 (R;US)
Application of intrinsic germanium spectral gamma-ray logging for characterization of high-level nuclear waste tank leaks, 19:6208 (R;US)
Asbestos-cement panels test report, 100K Area, Hanford, Washington, 19:7086 (R;US)
Assessment of unsaturated zone radionuclide contamination in the 200 areas of the Hanford site, Washington, 19:6246 (R;US)
Characterization of the sodium void reactivity effect for advanced liquid metal reactor fuels, 19:6628 (R;US)
Confined space entry program for the Westinghouse Hanford Company, 19:6295 (R;US)
Disposal of Hanford site tank wastes, 19:6206 (R;US)
Engineering assessment of low-level liquid waste disposal caisson locations at the 618-11 Burial Grounds, 19:6292 (R;US)
Facility effluent monitoring plan for the plutonium-uranium extraction facility, 19:6290 (R;US)
Functions and requirements for subsurface barriers used in support of single-shell tank waste retrieval, 19:6297 (R;US)
Hanford Site Groundwater Protection Management Program: Revision 1, 19:7442 (R;US)
Implementation plan for the Defense Nuclear Facilities Safety Board Recommendation 90-7: Revision 1, 19:6203 (R;US)
Lasers for the radioactive decontamination of concrete, 19:6207 (R;US)
Mixed waste solidification testing on polymer and cement-based waste forms in support of Hanford's WRAP 2A facility, 19:6209 (R;US)
Multiple missions: The 300 Area in Hanford Site history, 19:6129 (R;US)
Projecting the range of potential future climate change as an aid in the assessment of the effectiveness of the Hanford Site Permanent Isolation Barrier, 19:6293 (R;US)
Quarterly environmental radiological survey summary: First quarter 1993, 100, 200, 300, and 600 Areas, 19:7462 (R;US)
Quarterly report on Defense Nuclear Facilities Safety Board Recommendation 90-7 for the period ending June 30, 1993, 19:6204 (R;US)

Radioactive waste shipments to Hanford Retrievable Storage from the General Electric Vallecitos Nuclear Center, Pleasanton, California, 19:6291 (R;US)
Services provided by the 222-S laboratory for regulatory support, 19:6245 (R;US)
Soil washwater treatment system operating procedure, 19:6296 (R;US)
Supplemental design requirements document, Project W026: Revision 3, 19:6210 (R;US)
Technical Assessment: WRAP 1 HVAC Passive Shutdown, 19:7426 (R;US)
The evolution of Hanford Environmental Restoration program planning, estimating and baselining, 19:6294 (R;US)
The Westinghouse Hanford Company Operational Environmental Monitoring Program CY-93, 19:6205 (R;US)
Travel to Cadarache, France to review the preliminary transient code input data for the Fast Flux Test Facility: Foreign trip report, July 14–21, 1991, 19:6710 (R;US)
Travel to Germany to examine equipment from the SNR-300 plant: Foreign trip report, August 5–17, 1991, 19:6711 (R;US)
Travel to Japan to help JAERI scientists with design of burner reactors for nuclear waste transmutation: Foreign trip report, July 15–October 1, 1993, 19:6151 (R;US)
Travel to the Windscale and Dounreay sites in the United Kingdom to discuss the details of SNR-300 fuel assembly modification: Foreign trip report, July 12–19, 1991, 19:6625 (R;US)
United States Department of Energy Richland Operations Office Environmental Protection Implementation Plan: November 9, 1993, to November 9, 1994, 19:6155 (R;US)
Westinghouse Hanford Company operational environmental monitoring annual report, CY 1992, 19:6244 (R;US)
WRAP 2A product specification, 19:6211 (R;US)

Westinghouse Idaho Nuclear Co., Inc., Idaho Falls, ID (United States)
Effects of rebar and concrete construction joints on the migration of 4 M HNO_3 in concrete test cylinders, 19:7087 (R;US)

Westinghouse Savannah River Co., Aiken, SC (United States)
An SAR issue for the Savanah River reactors resolved with PRA methods, 19:6745 (R;US)
Assessment of strontium in the Savannah River Site environment, 19:6299 (R;US)
Bounding estimate of DWPF mercury emissions: Revision 1, 19:6225 (R;US)
Calculation of seismic Severe Core Melt Frequency using internal event models for K reactor, 19:6749 (R;US)
Chemical pretreatment of Savannah River Site nuclear waste for disposal, 19:6212 (R;US)
Corrosion of steel in simulated nuclear waste solutions, 19:6214 (R;US)
DWPF recycle minimization: Brainstorming session, 19:6230 (R;US)
Effect of nitrocarburizing on shape of titanium alloy parts, 19:7008 (R;US)
F/H seepage basin groundwater influent, effluent, precipitated sludge characterization task technical plan, 19:6217 (R;US)
F/H seepage basin groundwater process tank settling characterization task technical plan, 19:6220 (R;US)
Fault tree analysis of the F&H Canyon Exhaust Systems at the Savannah River Site, 19:6130 (R;US)
Final data report: Vertical process-pipe flow characteristics experiment, 19:6700 (R;US)
Final examination of IDMS corrosion coupons, 19:6228 (R;US)
High level radioactive waste glass production and product description, 19:6216 (R;US)
Human error model adaptation and validation for Savannah River Site nonreactor facilities, 19:6298 (R;US)
Identification of items and activities important to waste form acceptance by Westinghouse GoCo sites, 19:6223 (R;US)
In situ bioremediation via horizontal wells: Revision 1, 19:7463 (R;US)
Initial weights and dimensions of corrosion coupons installed in IDMS in August 1993, 19:6229 (R;US)
Ion exchange at TNX using the SKID unit, 19:6231 (R;US)
K Reactor restart configuration: Level 1 internal events PRA results, 19:6747 (R;US)
K-Area and Par Pond Sewage Sludge Application Sites groundwater monitoring report: Second quarter 1993, 19:7466 (R;US)
K-Area/Caustic Basin Groundwater Monitoring Report: Second quarter 1993, 19:7465 (R;US)
Nitric-phosphoric acid treatment of TRU wastes, 19:6222 (R;US)
One-quarter scale separate effects Wyle counterpart tests, 19:6701 (R;US)
P-Area Acid/Caustic Basin groundwater monitoring report: Second quarter 1993, 19:7464 (R;US)
Particle size distribution of ground ITP washed precipitate for estimating filter box radioactive cesium release during transfer, 19:6221 (R;US)
Performance degradation of a large production reactor recirculation pump during off-design conditions, 19:6746 (R;US)
Risk analysis for new nuclear waste sites: Will it generate public acceptance?, 19:6213 (R;US)
Risk assessment data banks at the Savannah River Site, 19:7953 (R;US)
Safety evaluation of the ITP filter/stripper test runs and quiet time runs using simulant solution, 19:6224 (R;US)
Savannah River Technology Center: Monthly report, May 1993, 19:6699 (R;US)
Scientific Computations section monthly report September 1993, 19:7948 (R;US)
SRS ES and H Standards Compliance Program Implementation Plan: Revision 1, 19:6301 (R;US)
Structural integrity evaluation of transuranic waste drums, 19:6227 (R;US)
Supplementary safety system 1/4 scale testing, 19:6748 (R;US)
Tank 29 salt removal method using slurry pump agitation, 19:6232 (R;US)
Task plan: Temperatures in DWPF Glass Waste Storage Building, 19:6218 (R;US)
Technical task plan for testing filter box sorbent-paint filter test, 19:6219 (R;US)
The Savannah River Technology Center, a leader in sensor technology, 19:7108 (R;US)
Tritium in the burial ground of the Savannah River Site, 19:6226 (R;US)
US EPA record of decision review for landfills: Sanitary landfill (740-G), Savannah River Site, 19:6300 (R;US)
Waste Tank Corrosion Program at Savannah River Site, 19:6215 (R;US)

Wind/Tornado Working Group (United States)
Title I wind/tornado design guidelines for new production reactors, 19:6743 (R;US)

Wisconsin Univ., Madison, WI (United States)
An analysis of monojet data in $p\bar{p}$ collisions at $\sqrt{s}$ = 1.8 TEV, 19:7618 (R;US)
An evaluation of the utility of ground-based high resolution interferometer (GB-HIS) soundings of the planetary boundary layer, 19:7396 (R;US)
Properties of events containing a photon and several jets seen in $p\bar{p}$ collisions at $\sqrt{s}$ = 1.8 TeV, 19:7619 (R;US)
TFTR Experimental Data Analysis Collaboration: Annual progress report, November 15, 1992–November 14, 1993, 19:7811 (R;US)
Theoretical reversed field pinch and tokamak studies: Progress report, November 1, 1992–June 10, 1993, 19:7803 (R;US)

Wisconsin Univ., Madison, WI (United States). Dept. of Electrical and Computer Engineering
TFTR Ion Cyclotron Range of Frequencies (ICRF) experimental data analysis collaboration: Annual progress report, December 1, 1992 to November 30, 1993, 19:7812 (R;US)

Wisconsin Univ., Madison, WI (United States). Dept. of Physics
Measurement of magnetic fluctuation induced energy transport, 19:7798 (R;US)

Wisconsin Univ., Madison, WI (United States). Fusion Technology Inst.
Fusion reactor systems studies: Progress report, November 1, 1992–October 31, 1993, 19:7854 (R;US)

Wisconsin Univ., Madison, WI (United States). Plasma Physics Research
Broadband EUV survey spectrometer for short-timescale experiments, 19:7799 (R;US)
Fluctuation and transport reduction in a reversed field pinch by inductive poloidal current drive, 19:7801 (R;US)
Photon counting spectroscopy as done with a Thomson scattering diagnostic, 19:7800 (R;US)
The dynamics of interacting nonlinearities governing long wavelength driftwave turbulence, 19:7809 (R;US)
Wiss, Janney, Elstner and Associates, Inc., Seattle, WA (United States)
Asbestos-cement panels test report, 100K Area, Hanford, Washington, 19:7086 (R;US)

Y

Yale Univ., New Haven, CT (United States)
[Continuation request for E864 capital grant, FY 1994]: [Semiannual technical progress report, June 1, 1993–November 14, 1993], 19:7312 (R;US)

Personal Author Index

Authors' surnames are indexed in the form appearing in the publication cited; given names generally have been reduced to initials. For documents with multiple authors, each author name is indexed. The entry for a primary author (first author listed on an abstracted document) includes the full document title and citation number. Entries for other authors provide a cross-reference to the primary author. Also included is information on the document type, country of publication, and the document language listed in parentheses in the format (J;FR;In French and English). Accent marks are not input because of computer alphabetization. Spelling and transliteration follow standard conventions.

Subject Index

This index is arranged by subject descriptors selected from those assigned to each citation in this publication. Subject descriptors are selected from a controlled thesaurus of terms, ETDE/PUB–2(Rev.1), *International Energy: Subject Thesaurus*. In order to enhance indexing, subject descriptor entries generally consist of a pair of descriptors: a main term and a qualifier term. Each entry includes the full title (which may be followed by supplementary descriptive information in parentheses) and the citation number. Additional information given in parentheses indicates the document type (an abbreviation such as B for book), the country of publication (such as DE for Federal Republic of Germany), and the language if non-English.

See references guide users from synonymous terms to the descriptors selected for the concept. *See also* references indicate subject concepts that are more specific than a particular descriptor. To gain complete subject coverage, all such terms should be reviewed.

Neutron scattering in biology, 19:7767 (IA;CH)
BIOMASS
Boiler Fuels
Case study of recycling options for New Hampshire generators, 19:6449 (RA;US)
Chemical Analysis
Travel to New Zealand for symposium on wood and pulping chemistry: Foreign trip report, April 29–May 9, 1991, 19:6363 (R;US)
Chemical Preparation
Overview of chemical pretreatment of biomass for ethanol production – constraints, challenges, current status, and future trends, 19:6395 (RA;US)
Cocombustion
Biomass combustion technologies for power generation, 19:6408 (RA;US)
Combustion
Case study of recycling options for New Hampshire generators, 19:6449 (RA;US)
Direct observation of the release of alkali vapor species in biofuel combustion and gasification, 19:6406 (RA;US)
Combustion Products
The direct observation of alkali vapor species in biomass combustion and gasification, 19:6424 (R;US)
Combustion Properties
The direct observation of alkali vapor species in biomass combustion and gasification, 19:6424 (R;US)
Cultivation Techniques
Space/age forestry: Implications of planting density and rotation age in SRIC management decisions, 19:6352 (RA;US)
Delignification
Fractionation of lignocellulosic biomass components by prehydrolysis-organosolv delignification, 19:6893 (RA;US)
Energy Analysis
Biomass energy inventory and mapping system, 19:6335 (RA;US)
Fermentation
Chemicals from biomass by fermentation, 19:6403 (RA;US)
Fluidized-Bed Combustion
Biomass combustion technologies for power generation, 19:6408 (RA;US)
Successful experience with limestone and other sorbents for combustion of biomass in fluid bed power boilers, 19:6410 (RA;US)
Fractionation
Fractionation of lignocellulosic biomass components by prehydrolysis-organosolv delignification, 19:6893 (RA;US)
Fuels
The biomass energy industry of northern New England: Lessons for America, 19:6435 (RA;US)
Gasification
An assessment of thermochemical conversion systems for processing biomass and refuse, 19:6366 (R;GB)
Analysis of tars produced in biomass gasification, 19:6450 (RA;US)
Biomass combustion technologies for power generation, 19:6408 (RA;US)
Biomass gasification hot gas cleanup for power generation, 19:6405 (RA;US)
Development of a catalytic system for gasification of wet biomass, 19:6418 (RA;US)
Direct observation of the release of alkali vapor species in biofuel combustion and gasification, 19:6406 (RA;US)
Production of 800 kW of electrical power using medium calorific gas from a biomass gasifier integrated in a combined cycle, 19:6415 (RA;US)
Temperature and pressure distributions in a 400 kW_t fluidized bed straw gasifier, 19:6419 (RA;US)
Thermal and biological gasification, 19:6368 (RA;US)
Travel to Spain for the IEA Pyrolysis Working Group meeting: Foreign trip report, November 27–December 4, 1993, 19:6364 (R;US)
WBP: The wood Brazilian BIG-GT demonstration project, 19:6367 (RA;US)
Global Aspects
Chemicals and products from biomass conversion: An overview, 19:6440 (RA;US)
Harvesting
An optimal staggered harvesting strategy for herbaceous biomass energy crops, 19:6353 (RA;US)
Historical Aspects
Chemicals and products from biomass conversion: An overview, 19:6440 (RA;US)
Inventories
Biomass resources in California, 19:6336 (RA;US)
Liquefaction
An assessment of thermochemical conversion systems for processing biomass and refuse, 19:6366 (R;GB)
Liquid Fuels
Biomass: An overview in the United States of America, 19:6330 (RA;US)
Mapping
Biomass energy inventory and mapping system, 19:6335 (RA;US)
Materials Handling Equipment
Principles of commercially available pretreatment and feeding equipment for baled biomass, 19:6444 (RA;US)
Moisture
Development of a catalytic system for gasification of wet biomass, 19:6418 (RA;US)
Processing
Development of a catalytic system for gasification of wet biomass, 19:6418 (RA;US)
Overview of chemical pretreatment of biomass for ethanol production – constraints, challenges, current status, and future trends, 19:6395 (RA;US)
Principles of commercially available pretreatment and feeding equipment for baled biomass, 19:6444 (RA;US)
The development of commercial scale Rapid Thermal Processing of biomass, 19:6398 (RA;US)
Pyrolysis
An assessment of thermochemical conversion systems for processing biomass and refuse, 19:6366 (R;GB)
Travel to Spain for the IEA Pyrolysis Working Group meeting: Foreign trip report, November 27–December 4, 1993, 19:6364 (R;US)
Research Programs
Biofuels feedstock development program: Annual progress report for 1992, 19:6362 (R;US)
Overview of feedstock research in the United States, Canada, and Brazil, 19:6332 (RA;US)
Resource Assessment
Biomass: An overview in the United States of America, 19:6330 (RA;US)
Resource Potential
An assessment of thermochemical conversion systems for processing biomass and refuse, 19:6366 (R;GB)
Biomass resources in California, 19:6336 (RA;US)
Socio-Economic Factors
Chemicals and products from biomass conversion: An overview, 19:6440 (RA;US)
Staged Combustion
Biomass combustion technologies for power generation, 19:6408 (RA;US)
Waste Product Utilization
Fractionation of lignocellulosic biomass components by prehydrolysis-organosolv delignification, 19:6893 (RA;US)

Study of lignocellulose components for production of lactic acid, 19:6892 (RA;US)
The thermochemical conversion of cellulosic biomass to high value chemicals and fuel additives, 19:6894 (RA;US)

BIOMASS CONVERSION PLANTS
Automated small-scale fuel alcohol plant: A means to add value to food processing waste, 19:6393 (RA;US)
Cost implications of feedstock combinations for community sized biodiesel production, 19:6771 (RA;US)
Further development of Soft-Top for the accumulation of biogas from storage tanks, 19:6448 (R;DK;In Danish)
The development of commercial scale Rapid Thermal Processing of biomass, 19:6398 (RA;US)
The production of non hydrocarbon-derived methanol, ethanol and their butyl ethers from biomass and butanes using the MOP process, 19:6397 (RA;US)

BIOMASS PLANTATIONS
C4 Species
Production of biomass/energy crops on phosphatic clay soils in central Florida, 19:6351 (RA;US)
Chemical Composition
Sweet sorghum cropping systems for on-farm ethanol or lactic acid, 19:6359 (RA;US)
Cultivation Techniques
Five years of research in energy plantation in southern Quebec (Canada), 19:6358 (RA;US)
Production of biomass/energy crops on phosphatic clay soils in central Florida, 19:6351 (RA;US)
Some ecological guidelines for large-scale biomass plantations, 19:6446 (RA;US)
Demonstration Programs
From research plots to prototype biomass plantations, 19:6347 (RA;US)
Willow bioenergy plantation research in the Northeast, 19:6345 (RA;US)
Economic Analysis
Compatibility of switchgrass as an energy crop in farming systems of the southeastern USA, 19:6348 (RA;US)
Evaluating a biomass resource: The TVA region-wide biomass resource assessment model, 19:6429 (RA;US)
Evaluating the economics of biomass energy production in the Watts Bar region, 19:6432 (RA;US)
Economic Impact
An evaluation of the regional supply of biomass at three midwestern sites, 19:6431 (RA;US)
Compatibility of switchgrass as an energy crop in farming systems of the southeastern USA, 19:6341 (RA;US)
Economics
Biofuels feedstock development program: Annual progress report for 1992, 19:6362 (R;US)
Environmental Impacts
Biofuels feedstock development program: Annual progress report for 1992, 19:6362 (R;US)
Compatibility of switchgrass as an energy crop in farming systems of the southeastern USA, 19:6341 (RA;US)
Evaluating the economics of biomass energy production in the Watts Bar region, 19:6432 (RA;US)
Five years of research in energy plantation in southern Quebec (Canada), 19:6358 (RA;US)
Some ecological guidelines for large-scale biomass plantations, 19:6446 (RA;US)
Fertilizers
Nutrient enhanced short rotation coppice for biomass in central Wales, 19:6356 (RA;US)
Sweet sorghum cropping systems for on-farm ethanol or lactic acid, 19:6359 (RA;US)
Growth
The growth and harvesting of kenaf and its conversion to products: Case history of an industrial biomass crop, 19:6361 (RA;US)
Harvesting
Development and analysis of SRIC harvesting systems, 19:6357 (RA;US)
The growth and harvesting of kenaf and its conversion to products: Case history of an industrial biomass crop, 19:6361 (RA;US)
Processing
The growth and harvesting of kenaf and its conversion to products: Case history of an industrial biomass crop, 19:6361 (RA;US)
Productivity
Five years of research in energy plantation in southern Quebec (Canada), 19:6358 (RA;US)
Research Programs
Five years of research in energy plantation in southern Quebec (Canada), 19:6358 (RA;US)
From research plots to prototype biomass plantations, 19:6347 (RA;US)
Resource Assessment
Evaluating a biomass resource: The TVA region-wide biomass resource assessment model, 19:6429 (RA;US)
Resource Management
Integrated production of warm season grasses and agroforestry for biomass production, 19:6349 (RA;US)
The role and significance of Salix plantations for energy in Swedish agriculture, 19:6346 (RA;US)
Short Rotation Cultivation
Development and analysis of SRIC harvesting systems, 19:6357 (RA;US)
Nutrient enhanced short rotation coppice for biomass in central Wales, 19:6356 (RA;US)
Short-rotation forestry for energy production in Hawaii, 19:6333 (RA;US)
Waste Management
The role and significance of Salix plantations for energy in Swedish agriculture, 19:6346 (RA;US)

BIOMEDICAL RADIOGRAPHY
A storage ring based inverse Compton scattering angiography source?, 19:7491 (R;US)
Accelerator mass spectrometry in biomedical research, 19:7486 (R;US)

CERAMIC MELTERS
Final examination of IDMS corrosion coupons, 19:6228 (R;US)
CERAMICS
Adhesive strength of ceramic coatings sprayed on controlled roughned surfaces, 19:7017 (IA;JP;In Japanese)
Collaborative research on ion implantation of ceramics.: Foreign trip report, June 25–July 21, 1993, 19:7033 (R;US)
Development of a predictive grinding model for the high-quality machining of engineering ceramics, 19:7027 (R;NL)
Mechanical properties of nanophase materials, 19:6929 (R;US)
Modeling of pulverulent ceramic jets with CALE: Final report, 19:7181 (R;US)
Resonant holographic measurements of laser ablation plume expansion in vacuum and argon gas backgrounds, 19:7754 (R;US)
Structure and properties of composites synthesized in situ using solid state displacement reactions, 19:7035 (R;US)
Travel to Germany for the International Symposium on Metal/Ceramic Interfaces: Foreign trip report, June 28–July 6, 1991, 19:6963 (R;US)
Travel to Germany to discuss structural ceramic research: Foreign trip report, September 29–October 9, 1993, 19:7034 (R;US)
Travel to Japan to participate in the 3rd International Union Materials Research Society (IUMRS) International Conference

on Advanced Materials: Foreign trip report, August 29–September 4, 1993, 19:6928 (R;US)
Travel to Scotland and Switzerland to participate in the 5th International Conference on Hopping and Related Phenomena: Foreign trip report, August 29, 1993–September 11, 1993, 19:7753 (R;US)

CERCLA
See US SUPERFUND

CEREALS
See also MAIZE
RICE
SORGHUM
Collection and hauling of cereal grain chaff, 19:6344 (RA;US)

CERIUM 140
The widths of magnetic twist modes, 19:7679 (R;RU)

CERMETS
Application of MA composite powder spraying for solid oxide fuel cell, 19:7023 (IA;JP;In Japanese)

CERN
Travel to Switzerland to confer with colleagues in the CERN Computing and Networks Division: Foreign trip report, March 8–16, 1991, 19:7200 (R;US)

CESIUM
Adsorption and desorption studies of cesium on sapphire surfaces, 19:7039 (R;US)
Ion exchange at TNX using the SKID unit, 19:6231 (R;US)
Leach studies: Influence of various parameters on leaching of cesium from cemented BWR evaporator concentrates, 19:6160 (R;IT)
Safety evaluation of the ITP filter/stripper test runs and quiet time runs using simulant solution, 19:6224 (R;US)
Tank 29 salt removal method using slurry pump agitation, 19:6232 (R;US)

CESIUM 135
High-value use of weapons-plutonium by burning in molten salt accelerator-driven subcritical systems or reactors, 19:6172 (R;US)

CESIUM 137
A comparison of four aerial radiological surveys of Par Pond and the surrounding area, Savannah River Site, Aiken, South Carolina: Dates of surveys: 1989–1992, 19:6236 (R;US)
Application of intrinsic germanium spectral gamma-ray logging for characterization of high-level nuclear waste tank leaks, 19:6208 (R;US)
Disposal of Hanford site tank wastes, 19:6206 (R;US)

CESIUM IODIDES
Amorphous silicon pixel layers with cesium iodide converters for medical radiography, 19:7335 (R;US)

Homolytic bond dissociation energies for C-H bonds adjacent to sulfur and aromatic moieties: The effects of substituents of C-H bond strengths of the benzylic positions in coal model compounds, 19:7123 (R;US)

Uses
Report of investigation on coal utilization technologies in America and North Europe, 19:6039 (RA;JP;In Japanese)

Water Removal
Report of investigation on current situation of fundamental studies on coal in Spain, 19:6054 (RA;JP;In Japanese)

Wettability
New concept for coal wettability evaluation and modulation: Technical progress report, July 1, 1993–September 30, 1993, 19:6015 (R;US)

COAL FINES
Bench scale testing of micronized magnetite beneficiation: Quarterly technical progress report No. 1, January–March 1993, 19:6014 (R;US)

COAL GAS
Innovative coke oven gas cleaning system for retrofit applications: Quarterly technical progress report No. 4, October 1, 1990 to December 31, 1990, 19:6056 (R;US)

COAL GASIFICATION
Air extraction in gas turbines burning coal-derived gas, 19:6574 (R;US)
Enhanced durability of high-temperature desulfurization sorbents for moving-bed applications: Option 2 Program: Development and testing of zinc titanate sorbents, 19:6021 (R;US)
Identifying technology barriers in adapting a state-of-the-art gas turbine for IGCC applications and an experimental investigation of air extraction schemes for IGCC operations: Final report, 19:6575 (R;US)
Report of 'investigatin on trends in studies of low-grade coal utilization technologies in East Europe', 19:6081 (RA;JP;In Japanese)
Split flow gasifier, 19:6041 (PA;US)
The role of catalyst precursor anions in coal gasification: Eighth quarterly report, [July–September 1993], 19:6035 (R;US)

COAL GASIFICATION PLANTS
Travel to the Netherlands to attend an international workshop on Materials for Coal Gasification Power Plants: Foreign trip report, June 12–19, 1993, 19:6040 (R;US)

COAL INDUSTRY
US energy industry financial developments, 1993 third quarter, 19:6770 (R;US)

COAL LIQUEFACTION
Activity testing of fine-particle size, iron catalysts for coal liquefaction, 19:6044 (R;US)
Advanced direct liquefaction concepts for PETC generic units: Quarterly technical progress report, April 1993–June 1993, 19:6032 (R;US)
Analysis of the radical hydrogen transfer pathway for cleaving strong bonds in coal, 19:6043 (R;US)
Coal liquefaction process streams characterization and evaluation: Quarterly technical progress report, October 1–December 31, 1992, 19:6048 (R;US)
Coal liquefaction process streams characterization and evaluation: Quarterly technical progress report, April 1–June 30, 1993, 19:6049 (R;US)
Effects of low-temperature catalytic pretreatments on coal structure and reactivity in liquefaction: [Quarterly] technical progress report, April–June 1993, 19:6033 (R;US)
Fundamental studies of coal liquefaction: Quarterly report No. 7, April 1–July 1, 1993, 19:6034 (R;US)
Relationship between iron oxide phase and catalytic activity in model compound reaction studies, 19:6042 (R;US)
Selective solvent absorption in coal conversion: Quarterly report, July 1, 1992–September 30, 1992, 19:6031 (R;US)
Travel to Japan to carry out several activities to Coal Energy Research and Development: Foreign trip report, October 17–29, 1991, 19:6019 (R;US)

COAL LIQUIDS
Coal liquefaction process streams characterization and evaluation: Quarterly technical progress report, October 1–December 31, 1992, 19:6048 (R;US)
Coal liquefaction process streams characterization and evaluation: Quarterly technical progress report, April 1–June 30, 1993, 19:6049 (R;US)
Hindered diffusion of coal liquids: Quarterly report No. 3, March 18, 1993–June 17, 1993, 19:6038 (R;US)

COAL PREPARATION
A combined physical/microbial process for coal beneficiation, 19:6017 (R;US)
Advanced physical fine coal cleaning spherical agglomeration: Final report, 19:6009 (R;US)
Advanced physical fine coal cleaning spherical agglomeration: Final report, Appendices, 19:6010 (R;US)
Suppression of fine ash formation in pulverized coal flames: Quarterly technical progress report No. 4, July 1, 1993–September 30, 1993, 19:6077 (R;US)

COAL TAR OILS
Vapor pressures and heats of vaporization of primary coal tars: Quarterly technical progress report, 1 July 1993–30 September 1993, 19:6053 (R;US)

COAL-DERIVED GASES
See COAL GAS

COAL-DERIVED LIQUIDS
See COAL LIQUIDS

COAL-FIRED MHD GENERATORS
See also MHD GENERATOR CDIF
Superheater/intermediate temperature airheater tube corrosion tests in the MHD Coal Fired Flow Facility (Eastern Coal Phase), 19:6834 (R;US)

COAL-OIL MIXTURES
See COAL
FUEL OILS
FUEL SLURRIES

COALTEK PROCESS
See FUEL FEEDING SYSTEMS

COASTAL REGIONS
Adjusted streamflow and storage: Columbia River and Coastal Basins, 1928–1989, 19:6461 (R;US)

Coastal Zone Management Act and related legislation: Revision 3: Environmental Guidance Program Reference Book, 19:6815 (R;US)

COASTAL ZONE MANAGEMENT ACT
Coastal Zone Management Act and related legislation: Revision 3: Environmental Guidance Program Reference Book, 19:6815 (R;US)

COATINGS
See also ANTIREFLECTION COATINGS
ENAMELS
ENERGY BEAM DEPOSITION FILMS
PAINTS
SPRAYED COATINGS

Adhesion
Formation of TiC/TiAl in situ composite layer on diecast aluminium alloy by electrical discharge alloying, 19:6946 (IA;JP;In Japanese)

Cobalt Additions
Structure and wear resistance property of high velocity combustion flame sprayed WC-12%Co coating, 19:7020 (IA;JP;In Japanese)

Composite Materials
Formation of TiC/TiAl in situ composite layer on diecast aluminium alloy by electrical discharge alloying, 19:6946 (IA;JP;In Japanese)

Crystal Structure
Structure and wear resistance property of high velocity combustion flame sprayed WC-12%Co coating, 19:7020 (IA;JP;In Japanese)

Dendrites
Formation of TiC/TiAl in situ composite layer on diecast aluminium alloy by electrical discharge alloying, 19:6946 (IA;JP;In Japanese)

Electron Microprobe Analysis
Structure and wear resistance property of high velocity combustion flame sprayed WC-12%Co coating, 19:7020 (IA;JP;In Japanese)

Fabrication
Multi-layer coating processing by thermal spraying using wet plating, 19:6955 (IA;JP;In Japanese)

Metallurgical Effects
Formation of TiC/TiAl in situ composite layer on diecast aluminium alloy by electrical discharge alloying, 19:6946 (IA;JP;In Japanese)

Microstructure
Structure and wear resistance property of high velocity combustion flame sprayed WC-12%Co coating, 19:7020 (IA;JP;In Japanese)

Plasma Arc Spraying
Effect of spraying parameters on the property of ceria stabilized zirconia coating, 19:7018 (IA;JP;In Japanese)

Scanning Electron Microscopy
Structure and wear resistance property of high velocity combustion flame sprayed WC-12%Co coating, 19:7020 (IA;JP;In Japanese)

Sintered Materials
Structure and wear resistance property of high velocity combustion flame sprayed WC-12%Co coating, 19:7020 (IA;JP;In Japanese)

Spray Coating
Effect of spraying parameters on the property of ceria stabilized zirconia coating, 19:7018 (IA;JP;In Japanese)

Stratification
Multi-layer coating processing by thermal spraying using wet plating, 19:6955 (IA;JP;In Japanese)

Thickness
Formation of TiC/TiAl in situ composite layer on diecast aluminium alloy by electrical discharge alloying, 19:6946 (IA;JP;In Japanese)

Titanium
Formation of TiC/TiAl in situ composite layer on diecast aluminium alloy by electrical discharge alloying, 19:6946 (IA;JP;In Japanese)

Titanium Carbides
Formation of TiC/TiAl in situ composite layer on diecast aluminium alloy by electrical discharge alloying, 19:6946 (IA;JP;In Japanese)

Tungsten Carbides
Structure and wear resistance property of high velocity combustion flame sprayed WC-12%Co coating, 19:7020 (IA;JP;In Japanese)

Vickers Hardness
Structure and wear resistance property of high velocity combustion flame sprayed WC-12%Co coating, 19:7020 (IA;JP;In Japanese)

Wear Resistance
Structure and wear resistance property of high velocity combustion flame sprayed WC-12%Co coating, 19:7020 (IA;JP;In Japanese)

X-Ray Diffraction
Structure and wear resistance property of high velocity combustion flame sprayed WC-12%Co coating, 19:7020 (IA;JP;In Japanese)

COBALT COMPOUNDS
Technology development for cobalt F-T catalysts: Quarterly technical progress report No. 1, September 25, 1992 to December 31, 1992, 19:6037 (R;US)

COCOMBUSTION
Cofiring of biofuels in coal fired boilers: Results of case study analysis, 19:6409 (RA;US)
Utilization of agricultural waste in power production, 19:6420 (RA;US)

COFIRING
See COCOMBUSTION

COGENERATION
An implementation of the diagnosis method DYANA, applied to a combined heat-power device, 19:6870 (R;NL)
Displacement expanders for small scale cogeneration, 19:6583 (R;SE)
North Plant co-generation project for South Davis County Sewer Improvement District, 19:6374 (RA;US)
The role of combined heat and power (CHP) in energy and climate policy, 19:6805 (R;DE;In German)

COGENERATION PLANTS
See DUAL-PURPOSE POWER PLANTS

COHERENT ANTI-STOKES RAMAN SPECTROSCOPY
See RAMAN SPECTROSCOPY

COKE-OVEN GAS
See COAL GAS

COKING PLANTS
Innovative coke oven gas cleaning system for retrofit applications: Quarterly technical progress report No. 4, October 1, 1990 to December 31, 1990, 19:6056 (R;US)

COLLEGES
See EDUCATIONAL FACILITIES

COLLIDER DETECTOR AT FERMILAB
See FERMILAB COLLIDER DETECTOR

COLLOIDS
See also FOAMS
Travel to Granada, Spain for discussions on materials that exhibit complex relaxations: Foreign trip report, June 21–17, 1993, 19:7053 (R;US)

COLOGNE SPIRITS
See ETHANOL

COLORADO
Partial and preliminary inventory of NOAA data for ARM/IDASS research, 19:7401 (R;US)

COLUMBIA RIVER
Adjusted streamflow and storage: Columbia River and Coastal Basins, 1928–1989, 19:6461 (R;US)
Radionuclide releases to the Columbia River from Hanford Operations, 1944–1971: Hanford Environmental Dose Reconstruction Project, 19:6241 (R;US)

COLUMNS (MECHANICAL)
See MECHANICAL STRUCTURES

COMBINED GAS AND STEAM CYCLE POWER PLANTS
See COMBINED-CYCLE POWER PLANTS

COMBINED STEAM-POWER GENERATION
See COGENERATION
COMBINED-CYCLE POWER PLANTS
Enhanced durability of high-temperature desulfurization sorbents for moving-bed applications: Option 2 Program: Development and testing of zinc titanate sorbents, 19:6021 (R;US)
Identifying technology barriers in adapting a state-of-the-art gas turbine for IGCC applications and an experimental investigation of air extraction schemes for IGCC operations: Final report, 19:6575 (R;US)
Production of 800 kW of electrical power using medium calorific gas from a biomass gasifier integrated in a combined cycle, 19:6415 (RA;US)
Recovery, transport, and disposal of CO_2 from an integrated gasification combined-cycle power plant, 19:6584 (R;US)
COMBUSTION
See also COCOMBUSTION
FLUIDIZED-BED COMBUSTION
METC Combustion Research Facility, 19:6069 (R;US)
Travel to China for the World Congress on Engineering and the Environment III and the Second Asian-Pacific International Symposium on Combustion and Energy Utilization: Foreign trip report, October 8–24, 1993, 19:6065 (R;US)
Uncertainties in the characterization of the thermal environment of a solid rocket propellant fire, 19:7136 (R;US)
COMBUSTION PRODUCTS
See also ASHES
Case study of recycling options for New Hampshire generators, 19:6449 (RA;US)
Direct coal-fired gas turbines for combined cycle plants, 19:6571 (R;US)
Integrated Low Emissions Cleanup system for direct coal fueled turbines, 19:6020 (R;US)
COMBUSTORS
See also CYCLONE COMBUSTORS
FLUIDIZED-BED COMBUSTORS
Computational model of a whole tree combustor, 19:6413 (RA;US)
The experience of burning the high-moistured waste of biomass conversion, 19:6422 (RA;US)
COMMERCE (NUCLEAR)
See NUCLEAR TRADE
COMMERCIAL BUILDINGS
Integrating climate change into energy demand forecasts: A commercial sector analysis, 19:6773 (R;US)
COMMERCIAL SECTOR
Bonneville Power Administration's commercial sector conservation market, 19:6754 (R;US)
COMPLEX TERRAIN
An overview of the ASCOT program, 19:7419 (R;US)
COMPOSITE MATERIALS
See also CERMETS
WOOD-PLASTIC COMPOSITES
Anisotropy
A higher order shear deformation theory for laminated anisotropic plates and its application in defence industry, 19:6965 (R;PK)
Chemical Properties
New lignin products for ecological situation improvement, 19:7066 (RA;US)
Domain Structure
Sol-gel derived silica/siloxane composite materials: The effect of loading level and catalyst activity on silica domain formation, 19:7079 (R;US)
Fabrication
Fabrication and testing of plasma-spray formed $MoSi_2$ and $MoSi_2$ composite tubes, 19:7031 (R;US)
Microwave assisted chemical vapor infiltration, 19:7060 (R;US)
Fracture Properties
Numerical simulations of interfacial debonding in ductile-phase reinforced intermetallic matrix composites, 19:7084 (R;US)
Grinding
Application of MA composite powder spraying for solid oxide fuel cell, 19:7023 (IA;JP;In Japanese)
Grindability of alumina fibre reinforced aluminium-alloy matrix composite material, 19:7068 (R;SE)
Plasma spraying of Ni/ZrO2 mechanically alloyed composite powders, 19:7022 (IA;JP;In Japanese)
Hardening
General Motors Corporation and Pacific Northwest Laboratory staff exchange: Inspection of case hardened steels and metal-matrix composites, 19:6986 (R;US)
Martensitic Steels
Properties of SUS440C/Ag composite coatings deposited by wire explosion spraying, 19:6949 (IA;JP;In Japanese)
Mechanical Properties
Fabrication and testing of plasma-spray formed $MoSi_2$ and $MoSi_2$ composite tubes, 19:7031 (R;US)
Investigation of forced and isothermal chemical vapor infiltrated SiC/SiC ceramic matrix composites: Final report, 19:7069 (R;US)
Sol-gel derived silica/siloxane composite materials: The effect of loading level and catalyst activity on silica domain formation, 19:7079 (R;US)
National Defense
New materials in defence, 19:7055 (R;PK)
Physical Properties
New lignin products for ecological situation improvement, 19:7066 (RA;US)
Plasma Arc Spraying
Fabrication and testing of plasma-spray formed $MoSi_2$ and $MoSi_2$ composite tubes, 19:7031 (R;US)
Plasma spraying of Ni/ZrO2 mechanically alloyed composite powders, 19:7022 (IA;JP;In Japanese)
Powders
Plasma spraying of Ni/ZrO2 mechanically alloyed composite powders, 19:7022 (IA;JP;In Japanese)
Shear Properties
A higher order shear deformation theory for laminated anisotropic plates and its application in defence industry, 19:6965 (R;PK)
Silver
Properties of SUS440C/Ag composite coatings deposited by wire explosion spraying, 19:6949 (IA;JP;In Japanese)
Sprayed Coatings
Application of MA composite powder spraying for solid oxide fuel cell, 19:7023 (IA;JP;In Japanese)
Stratification
Properties of SUS440C/Ag composite coatings deposited by wire explosion spraying, 19:6949 (IA;JP;In Japanese)
Synthesis
Structure and properties of intermetallic composites synthesized in situ using solid state displacement reactions, 19:7071 (R;US)
COMPOUND NUCLEI
Data on parity violation in the compound nucleus and its interpretation, 19:7592 (R;US)
COMPOUND PARABOLIC CONCENTRATORS
Nonimaging reflectors as functionals of the desired irradiance, 19:6488 (RA;US)
Performance of the Southern California Edison Company Stirling dish, 19:6478 (R;US)
COMPOUNDS (ORGANIC)
See ORGANIC COMPOUNDS
COMPUTER CALCULATIONS
Summary of uncertainty analysis of dispersion and deposition modules of the MACCS and COSYMA consequence codes: A joint USNRC/CEC study, 19:6741 (R;US)

COMPUTERIZED CONTROL SYSTEMS
Demonstration Programs
US utility I&C upgrade initiative, 19:6677 (RA;US)
Design
Instrumentation and control system upgrade plan for operating PWR plants in Japan, 19:6618 (RA;US)
Human Factors Engineering
Strategy to safety grade systems replacements, 19:6679 (RA;US)
Installation
Experience in installing a microprocessor-based protection system on a UK nuclear power plant, 19:6678 (RA;US)
Licensing Regulations
Experience in installing a microprocessor-based protection system on a UK nuclear power plant, 19:6678 (RA;US)
Recent activities within Nuclear Electric related to the qualification of digital systems and the extension of maintenance intervals, 19:6621 (RA;US)
Maintenance
Software maintenance and re-validation for nuclear power plants, 19:6681 (RA;US)
Modifications
Upgrade of DIII-D toroidal magnetic field power supply controls, 19:7872 (R;US)
Neural Networks
Adaptive optimization and control using neural networks, 19:7931 (R;US)
Operation
Experience in installing a microprocessor-based protection system on a UK nuclear power plant, 19:6678 (RA;US)
Performance
US utility I&C upgrade initiative, 19:6677 (RA;US)
Programming
Graphical programming at Sandia National Laboratories, 19:7154 (R;US)
Reliability
Instrumentation and control system upgrade plan for operating PWR plants in Japan, 19:6618 (RA;US)
Reliability analysis of microprocessor-based control and protection systems in nuclear power plants, 19:6682 (RA;US)
Strategy to safety grade systems replacements, 19:6679 (RA;US)
Retrofitting
Strategy to safety grade systems replacements, 19:6679 (RA;US)
Safety
US utility I&C upgrade initiative, 19:6677 (RA;US)
Safety Analysis
Reliability analysis of microprocessor-based control and protection systems in nuclear power plants, 19:6682 (RA;US)
Standards
Qualification issues associated with the use of advanced instrumentation and control systems hardware in nuclear power plants, 19:6597 (RA;US)
Validation
Qualification issues associated with the use of advanced instrumentation and control systems hardware in nuclear power plants, 19:6597 (RA;US)
Software maintenance and re-validation for nuclear power plants, 19:6681 (RA;US)

COMPUTERIZED SIMULATION
Blasting, graphical interfaces and Unix, 19:7370 (R;US)

COMPUTERS
See also CRAY COMPUTERS
An analysis of file system and installation of the file management system for NOS operating system, 19:7926 (R;KR;In Korean)
Emerging human-computer interface (HCI) design guidelines for graphical user interface (GUI), 19:7937 (R;US)
The High Performance Storage System: Revision 1, 19:7951 (R;US)
Using a transfer function to describe the load-balancing problem, 19:7905 (R;US)

CONCRETES
A simplified model of aerosol scrubbing by a water pool overlying core debris interacting with concrete: Final report, 19:6726 (R;US)
Core-concrete interactions with overlying water pools: The WETCOR-1 test, 19:6727 (R;US)
Effects of rebar and concrete construction joints on the migration of 4 M HNO_3 in concrete test cylinders, 19:7087 (R;US)
Improved utilization of coal derived fly ash in concrete: Quarterly technical progress report No. 12, 19:6057 (R;US)
Lasers for the radioactive decontamination of concrete, 19:6207 (R;US)
Nuclear Regulatory Commission issuances, October 1993: Volume 38, No. 4, 19:6723 (R;US)
The probability of Mark-I containment failure by melt-attack of the liner, 19:6730 (R;US)

CONOCO GASIFICATION PROCESS

THAILAND
Summary of a reference book on financing arrangements for nuclear power projects in developing countries, 19:6644 (I;XA)
Visions for a sustainable world: A conference on science, technology and social responsibility: Conference report, 19:6768 (R;US)
DEVICES
See EQUIPMENT
DIAMONDS
Fullerenes as precursors for diamond film growth without hydrogen or oxygen additions, 19:7042 (R;US)
Ion implantation of diamond: Damage, doping, and lift-off, 19:6320 (R;US)
Molecular beam mass spectrometry studies of the chemical vapor deposition of diamond, 19:7080 (R;US)
DIAPHRAGMS (THERMONUCLEAR DEVICE)
See LIMITERS
DIATOMS
[Environmental Hazards Assessment Program annual report, June 1992–June 1993]: Use of diatom distributions to monitor environmental health, 19:7469 (R;US)
DIES
Effect of nitrocarburizing on shape of titanium alloy parts, 19:7008 (R;US)
DIESEL ENGINES
Air Pollution Control
Particulate control for coal-fueled diesel engine exhaust, 19:6916 (R;US)
Computerized Control Systems
Feasibility study on introduction of a large methanol engine power generation plant, 19:6460 (R;JP;In Japanese)
Fuel Substitution
An overview of the current status of biodiesel, 19:6377 (RA;US)
Chemical composition of tall oil-based cetane enhancer for diesel fuels, 19:6381 (RA;US)
Coal-fueled diesel engines for locomotive applications, 19:6913 (R;US)
Commercialization of coal diesel engines for non-utility and export power markets, 19:6918 (R;US)
National SoyDiesel Development Board standards for biodiesel, 19:6822 (RA;US)
Nonaqueous enzymatic synthesis of ester fuels, 19:6380 (RA;US)
Progress report Idaho on-road test with vegetable oil as a diesel fuel, 19:6423 (RA;US)

Rapeseed and safflower oils as diesel fuels, 19:6384 (RA;US)
Rapeseed oil as diesel fuel, an overview, 19:6383 (RA;US)
Transesterification process to manufacture ethyl ester of rape oil, 19:6378 (RA;US)

Methanol Fuels
Feasibility study on introduction of a large methanol engine power generation plant, 19:6460 (R;JP;In Japanese)

Nitrogen Oxides
Feasibility study on introduction of a large methanol engine power generation plant, 19:6460 (R;JP;In Japanese)

Power Plants
Feasibility study on introduction of a large methanol engine power generation plant, 19:6460 (R;JP;In Japanese)

Power Range 10-100 Mw
Feasibility study on introduction of a large methanol engine power generation plant, 19:6460 (R;JP;In Japanese)

Power Range 100-1000 Mw
Feasibility study on introduction of a large methanol engine power generation plant, 19:6460 (R;JP;In Japanese)

Start-Up
Feasibility study on introduction of a large methanol engine power generation plant, 19:6460 (R;JP;In Japanese)

Synthetic Fuels
Biodiesel from microalgae: Complementarity in a fuel development strategy, 19:6382 (RA;US)
Conversion of rice hulls to diesel fuel, 19:6379 (RA;US)

Thermal Efficiency
Feasibility study on introduction of a large methanol engine power generation plant, 19:6460 (R;JP;In Japanese)

Waste Heat Utilization
Feasibility study on introduction of a large methanol engine power generation plant, 19:6460 (R;JP;In Japanese)

DIESEL FUELS
Chemical composition of tall oil-based cetane enhancer for diesel fuels, 19:6381 (RA;US)
Rapeseed oil as diesel fuel, an overview, 19:6383 (RA;US)

DIESEL MOTORS
See DIESEL ENGINES

DIESEL OIL (FRACTION)
See DIESEL FUELS

DIFFRACTION
Measurement of the elastic, total and single diffraction cross sections at Tevatron energies, 19:7625 (R;US)

DIFFRACTION GRATINGS
Intensity of waves diffracted from symmetrical profile lamellar gratings, 19:7541 (R;XA)
Water-cooled ion-milled diffraction gratings for the synchrotron radiation community, 19:7271 (R;US)

DIFFUSION
Hydrogen and deuterium in multi-crystalline silicon wafers and solar cells, 19:6467 (R;NL)
Hydrogen and deuterium in semi-crystalline silicon wafers and solar cells, 19:6468 (R;NL)
ONED90: 1-dimensional diffusion code, 19:7927 (R;KR;In Korean)

DIGESTER GAS
See METHANE

DIGITAL SYSTEMS
Addressing the susceptibility of digital systems to electromagnetic interference, 19:6669 (RA;US)
Recent activities within Nuclear Electric related to the qualification of digital systems and the extension of maintenance intervals, 19:6621 (RA;US)
Regulatory perspective on digital instrumentation and control systems for future advanced nuclear power plants, 19:6641 (RA;US)
Regulatory requirements for replacement of analog systems with digital upgrades, 19:6668 (RA;US)

DILUTION
Reload safety evaluation of boron dilution accident related to shutdown margin proportional to boron concentration, 19:6615 (R;KR;In Korean)

DIODE TRANSISTORS
See TRANSISTORS

DIRECTIONAL RADIATION DETECTORS
Directional measurements for sources of fission neutrons, 19:7321 (R;US)

DIRICHLET PROBLEM
Oceanic circulation code on connection machine, 19:7907 (R;FR;In French)

DISASTERS

HANFORD ENGINEERING DEVELOPMENT LABORATORY
History of operations (1 January 1944–20 March 1945), 19:6698 (R;US)
Technical Department (Part I): Book 14, Operation of Hanford Engineer Works, 19:6127 (R;US)
HANFORD PRODUCTION REACTORS
Fuel failure reports, 1968–1969, 19:6693 (R;US)
[Hanford 100 Area Technical Department monthly activity report], February 1945, 19:6694 (R;US)
HANFORD RESERVATION
Aquifers
Applicability of slug interference testing of hydraulic characterization of contaminated aquifer sites, 19:6282 (R;US)
Buildings
Asbestos-cement panels test report, 100K Area, Hanford, Washington, 19:7086 (R;US)
Contamination
Services provided by the 222-S laboratory for regulatory support, 19:6245 (R;US)
Environmental Impacts
Westinghouse Hanford Company operational environmental monitoring annual report, CY 1992, 19:6244 (R;US)
Environmental Policy
United States Department of Energy Richland Operations Office Environmental Protection Implementation Plan: November 9, 1993, to November 9, 1994, 19:6155 (R;US)
Gamma Logging
Application of intrinsic germanium spectral gamma-ray logging for characterization of high-level nuclear waste tank leaks, 19:6208 (R;US)
Assessment of unsaturated zone radionuclide contamination in the 200 areas of the Hanford site, Washington, 19:6246 (R;US)
Historical Aspects
P Department functions and organization to July 1, 1945, 19:6120 (R;US)
S Department: Book 12, Operation of Hanford Engineer Works, 19:6128 (R;US)
Isotope Separation Plants
A brief history of the PUREX and UO_3 facilities, 19:6121 (R;US)
Operation
P Department functions and organization to July 1, 1945, 19:6120 (R;US)
Personnel
An evaluation of the adequacy of vital status follow-up in the Hanford worker mortality study, 19:6280 (R;US)
Planning
Using multi-disciplinary strategic master facilities planning for organizations experiencing programmatic re-direction, 19:7901 (R;US)
Program Management
Security Transition Program Office 1994 fiscal year work plan WBS 6.11, 19:6304 (R;US)
Radiation Monitoring
Isotopic trace analysis by atomic mass spectrometry, 19:7107 (R;US)
Radioactive Effluents
Commercial milk distribution profiles and production locations: Hanford Environmental Dose Reconstruction Project, 19:6239 (R;US)
Final report on the meteorological database, December 1944–1949: Hanford Environmental Dose Reconstruction Project, 19:7506 (R;US)
Hanford Environmental Dose Reconstruction Project, Quarterly report, September–November 1993, 19:7458 (R;US)
Radionuclide releases to the Columbia River from Hanford Operations, 1944–1971: Hanford Environmental Dose Reconstruction Project, 19:6241 (R;US)
Radionuclide releases to the atmosphere from Hanford Operations, 1944–1972: Hanford Environmental Dose Reconstruction Project, 19:6240 (R;US)
Radioactive Waste Facilities
Reaction sequences in simulated neutralized current acid waste slurry during processing with formic acid, 19:6191 (R;US)
Radioactive Waste Management
Disposal of Hanford site tank wastes, 19:6206 (R;US)
Tank SY-102 remediation project: Flowsheet and conceptual design report, 19:6171 (R;US)
WRAP 2A product specification, 19:6211 (R;US)
Records Management
Team Hanford: Records management in a multi-contractor environment, 19:6804 (R;US)
Remedial Action
100 area excavation treatability test plan, 19:6267 (R;US)
Engineering assessment of low-level liquid waste disposal caisson locations at the 618-11 Burial Grounds, 19:6292 (R;US)
Functions and requirements for subsurface barriers used in support of single-shell tank waste retrieval, 19:6297 (R;US)
Phase 1 and 2 feasibility study report for the 300-FF-1 Operable Unit, 19:6266 (R;US)
Radioactive waste shipments to Hanford Retrievable Storage from the General Electric Vallecitos Nuclear Center, Pleasanton, California, 19:6291 (R;US)
Schedule optimization study implementation plan, 19:6269 (R;US)
The evolution of Hanford Environmental Restoration program planning, estimating and baselining, 19:6294 (R;US)
Security
Security Transition Program Office 1994 fiscal year work plan WBS 6.11, 19:6304 (R;US)
Site Characterization
Application of the Ferris test methods for estimating hydraulic properties near a river boundary, 19:6192 (R;US)
Physiologically anaerobic microorganisms of the deep subsurface: Final performance report, June 1, 1990–August 31, 1993, 19:6260 (R;US)
Steam Generation Plants
Notice of construction for proposed backup package boiler, 19:6109 (R;US)
Terrestrial Ecosystems
Plant reestablishment after soil disturbance: Effects of soils, treatment, and time, 19:7453 (R;US)
Waste Management

See NEUTRON SOURCE FACILITIES

HIGH SPIN STATES
High-spin nuclear structure studies with radioactive ion beams, 19:7693 (RA;US)
Investigations of nuclear structure and nuclear reactions induced by complex projectiles: Progress report for the period September 1, 1992–August 31, 1993, 19:7677 (R;US)

HIGH TEMPERATURE GAS COOLED AND GRAPHITE MODERATED REACTORS
See HTGR TYPE REACTORS

HIGH VOLTAGE ALTERNATING CURRENT SYSTEMS
See HVAC SYSTEMS

HIGH-BETA PLASMA
Toroidal plasma beta-FLR limit in a toroidally linked mirror system, 19:7815 (R;US)

HIGH-LEVEL RADIOACTIVE WASTES
Minimization
Process chemistry for the pretreatment of Hanford tank wastes, 19:6184 (R;US)
Monitoring
Quarterly report on Defense Nuclear Facilities Safety Board Recommendation 90-7 for the period ending June 30, 1993, 19:6204 (R;US)
Radioactive Waste Disposal
Software requirements specification document for the AREST code development, 19:6182 (R;US)
Radioactive Waste Management
Tank SY-102 remediation project: Flowsheet and conceptual design report, 19:6171 (R;US)
Radioactive Waste Processing
Chemical pretreatment of Savannah River Site nuclear waste for disposal, 19:6212 (R;US)
Corrosion of steel in simulated nuclear waste solutions, 19:6214 (R;US)
DWPF recycle minimization: Brainstorming session, 19:6230 (R;US)
Task plan: Temperatures in DWPF Glass Waste Storage Building, 19:6218 (R;US)
Radioactive Waste Storage
Chemical composition of Hanford Tank SY-102, 19:6170 (R;US)
Hanford high level waste (HLW) tank mixer pump safe operating envelope reliability assessment, 19:6173 (R;US)
PSA results for Hanford high level waste Tank 101-SY, 19:6174 (R;US)
Quarterly report on Defense Nuclear Facilities Safety Board Recommendation 90-7 for the period ending June 30, 1993, 19:6204 (R;US)
Task plan: Temperatures in DWPF Glass Waste Storage Building, 19:6218 (R;US)
Technical task plan for testing filter box sorbent-paint filter test, 19:6219 (R;US)
Safety Analysis
Hanford high level waste (HLW) tank mixer pump safe operating envelope reliability assessment, 19:6173 (R;US)
PSA results for Hanford high level waste Tank 101-SY, 19:6174 (R;US)
Underground Disposal
Implementation plan for the Defense Nuclear Facilities Safety Board Recommendation 90-7: Revision 1, 19:6203 (R;US)
Software requirements specification document for the AREST code development, 19:6182 (R;US)
Underground Storage
Process chemistry for the pretreatment of Hanford tank wastes, 19:6184 (R;US)
Vitrification
High level radioactive waste glass production and product description, 19:6216 (R;US)
High-level waste glass compendium; what it tells us concerning the durability of borosilicate waste glass, 19:6139 (R;US)
High-level waste qualification: Managing uncertainty, 19:6186 (R;US)
Processing constraints on high-level nuclear waste glasses for Hanford Waste Vitrification Plant, 19:6188 (R;US)
Waste Transportation
Particle size distribution of ground ITP washed precipitate for estimating filter box radioactive cesium release during transfer, 19:6221 (R;US)

HIGH-TC SUPERCONDUCTORS
Current leads and magnetic bearings, 19:7785 (R;US)
Flux flow, pinning, and resistive behavior in superconducting networks: Annual progress report, May 1, 1993–April 30, 1994, 19:7789 (R;US)
Neutron scattering and antiferromagnetic fluctuations in high-T_c superconductors below T_c, 19:7757 (R;RU)
On the nature of oxygen bonding in BiSrCaCuO superconductors as reflected through Auger parameters and O(KLL) intensities, 19:7063 (IA;IL)
Photothermal measurements of superconductors, 19:7012 (RA;US)
Practical superconductor development for electrical power applications: Annual report for FY 1993, 19:7782 (R;US)
Superconducting property measurements in tape geometry, 19:7011 (RA;US)
Synthesis, rheology and forming of Y-Ba-Cu-O ceramics, 19:7790 (R;US)

HIGHWAYS

STEELS
Current status of research and development on nickel and iron aluminides, 19:6961 (R;US)
Terfenol: A study of the phase equilibrium diagram and the solidification process, 19:6968 (R;US)
IRON OXIDES
Relationship between iron oxide phase and catalytic activity in model compound reaction studies, 19:6042 (R;US)
IRRADIATION CAPSULES
Fission product behavior in gas-cooled reactors and fuel performance: Foreign trip report, June 19–27, 1993, 19:6622 (R;US)
ISOBUTYLENE
See 2-METHYLPROPENE
ISOCHRONOUS CYCLOTRONS
The role of cyclotrons as primary and secondary beam accelerators, 19:7251 (RA;US)
ISOLATED LOCATIONS
See REMOTE AREAS
ISOTHIOCYANATES
Infrared diode laser studies of the products from the reaction $CH_2(\tilde{X}^3B_1) + O_2$ and from the near-UV photolysis of CH_3NCS, 19:7131 (R;US)
ISOTOPE ANALYSIS (QUANTITATIVE)
See ISOTOPE RATIO
ISOTOPE COMPOSITION (QUANTITATIVE)
See ISOTOPE RATIO
ISOTOPE RATIO
Comparison of three gamma-ray isotopic determination codes: FRAM, MGA, and TRIFID, 19:6308 (R;US)
ISOTOPE SEPARATION PLANTS
A brief history of the PUREX and UO_3 facilities, 19:6121 (R;US)
ISOTOPIC ANALYSIS (QUANTITATIVE)
See ISOTOPE RATIO
ISOTOPIC COMPOSITION (QUANTITATIVE)
See ISOTOPE RATIO

ITALY
Finite element model for prediction of circulation in Gulf of La Spezia (Italy): Tide, wind and seiche effects analysis, 19:7473 (R;IT;In Italian)
Technical and economical feasibility study for energy requalification of school buildings in Bertesina 'M. Montessori', Vicenza (Italy), 19:6898 (R;IT;In Italian)
Wind field modelling: Mass consistent model and simulation of atmospheric dispersion of passive pollutants over complex terrain and heterogeneous surfaces, 19:7404 (R;IT;In Italian)

ITER TOKAMAK
A robust helium-cooled shield/blanket design for ITER, 19:7873 (R;US)
Advanced steady-state operating scenarios, 19:7897 (R;US)
Argon frost continuous cryopump for fusion applications, 19:7850 (R;US)
Cryogenic fracture behavior of 316LN in magnetic fields up to 14.6 T, 19:6976 (R;US)
Gas purification by use of hot metal getter beds, 19:7880 (R;DE)
Poloidal flux linkage requirements for the International Thermonuclear Experimental Reactor, 19:7842 (R;US)
Travel to Germany for ITER task negotiations: Foreign trip report, July 11–17, 1993, 19:7861 (R;US)
Travel to Germany to attend the International Thermonuclear Experimental Reactor (ITER) RF Technical Meeting: Foreign trip report, October 19–27, 1993, 19:7836 (R;US)
Travel to Germany to discuss European licensing of potential ITER design options: Foreign trip report, July 10–17, 1993, 19:7864 (R;US)
Travel to Italy for Workshop on Plasma Edge Theory in Fusion Devices: Foreign trip report, October 1–10, 1993, 19:7869 (R;US)
Travel to Switzerland to discuss the design of the ITER long-length quench experiment: Foreign trip report, November 14–21, 1993, 19:7870 (R;US)

J

JAPAN
Integrated solid waste management in Japan, 19:6905 (RA;US)

JET MODEL
Jet production in muon scattering at Fermilab E665, 19:7631 (R;US)

JET REACTORS
See JET TOKAMAK

JET TOKAMAK
Application of dynamic response analysis to JET heat pulse data, 19:7827 (R;GB)

JETS
Comparative study of the vorticity field in turbulent flows: Theory, experiments and computations: Final report, 19:7172 (R;US)
High speed arc spray process, 19:7142 (IA;JP;In Japanese)
Modeling of pulverulent ceramic jets with CALE: Final report, 19:7181 (R;US)
The effect of turbulence on the stability of liquid jets and the resulting droplet size distributions: Third quarterly technical report, July 1, 1993–September 30, 1993, 19:7173 (R;US)

K

K CODES
Experience with the Common KADS WB, 19:7913 (R;NL)

K REACTOR
Calculation of seismic Severe Core Melt Frequency using internal event models for K reactor, 19:6749 (R;US)
K Reactor restart configuration: Level 1 internal events PRA results, 19:6747 (R;US)
Supplementary safety system 1/4 scale testing, 19:6748 (R;US)

K-25 PLANT
See ORGDP

KALKAR POWER REACTOR
See SNR REACTOR

KANSAS
Surfactant-enhanced alkaline flooding field project: Annual report, 19:6088 (R;US)

KAONS
See also KAONS PLUS
Angular dependence of parton-parton scattering extracted from hadron pair production in pp collisions at $\sqrt{s}$=11.5 GeV, 19:7639 (R;RU)

KAONS PLUS
Topics in electroweak baryogenesis: The sphaleron and t-violation, 19:7576 (R;US)

KAPPA-725 RESONANCES
See MESONS

KERR METRIC
Kerr-Schild metrics revisited. Pt. 1: The ground state, 19:7534 (R;HU)
Kerr-Schild metrics revisited. Pt. 2: The homogeneous integrals, 19:7535 (R;HU)

KETOVALERIC ACID-GAMMA
See LEVULINIC ACID

KLYSTRONS
A test accelerator for the next linear collider, 19:7209 (R;US)
Amended proposal for R&D on a cluster klystron, 19:7238 (R;US)
Energy efficient deQing for SLAC Klystron Modulators, 19:7282 (R;US)

KMR REACTOR
KMRR fuel design, 19:6672 (R;KR;In Korean)

KNOCK-ON ELECTRONS
See ELECTRONS

KNU-9 REACTOR
See ULCHIN-1 REACTOR

KOREA (NORTH)
See NORTH KOREA

KORI-2 REACTOR
A technical report on the operational data analysis for kori-2, cycle-7, 19:6607 (R;KR;In Korean)
Nuclear design report for kori nuclear power plant unit 2, cycle 9, 19:6606 (R;KR)

KOVAR
High temperature grain growth and oxidation of Fe-29Ni-17Co (Kovar™) alloy leads, 19:7001 (R;US)

KOZLODUY-1 REACTOR
Investigation of spectral and spatial microseismic noise characteristics around Kozloduy NPP (Bulgaria), 19:7445 (RA;CZ)

L

L CODES
LAS CRUCES DATABASE: Las Cruces Trench Site Database, Vadose Model, 19:7920 (CM;US)
LPDSERVICES: An RFC 1179 Compatible Remote Print Server for Windows 3.1, 19:7915 (CM;US)

L REACTOR
Final data report: Vertical process-pipe flow characteristics experiment, 19:6700 (R;US)

LA REINA REACTOR
See RESEARCH REACTORS

LA SALLE COUNTY-2 REACTOR
Analysis of the LaSalle Unit 2 nuclear power plant: Risk Methods Integration and Evaluation Program (RMIEP): Volume 8, Seismic analysis, 19:6724 (R;US)

LABORATORIES
US Department of Energy multiprogram laboratories, 1981 to 1991, a decade of change, 19:6795 (R;US)

LACTIC ACID
Catalytic conversion of lactic acid and its derivatives, 19:6890 (RA;US)
Study of lignocellulose components for production of lactic acid, 19:6892 (RA;US)

LAMBDA NEUTRAL
See LAMBDA PARTICLES

LAMBDA PARTICLES
Recent results and directions in hypernuclear and Kaon physics, 19:7672 (R;US)
LAND FILLS
See SANITARY LANDFILLS
LAND POLLUTION
Contaminated soils and treatment technologies from the chemist's point of view (a summary of literature), 19:7449 (R;DE;In German)
LAND POLLUTION CONTROL
Contaminated soils and treatment technologies from the chemist's point of view (a summary of literature), 19:7449 (R;DE;In German)
LAND RECLAMATION
K-Area and Par Pond Sewage Sludge Application Sites groundwater monitoring report: Second quarter 1993, 19:7466 (R;US)
LAND USE
Waste Isolation Pilot Plant, Land Management Plan, 19:6156 (R;US)
LANDFILLS
See SANITARY LANDFILLS
LANGMUIR OSCILLATIONS
See PLASMA WAVES
LANL
Life safety and seismic hazards: Selecting buildings for review and questions still to answer, 19:6276 (R;US)
Risk management at Los Alamos National Laboratory, 19:6277 (R;US)
LANTHANUM CHROMITES
See CHROMIUM OXIDES
LANTHANUM OXIDES
LANTHANUM OXIDES
Synthesis, characterization, phase diagrams and superconducting and normal state magnetic properties of $La_{2-x}Sr_xCuO_4$ ($0 \leq x \leq 0.08$) and electrochemically oxidized $La_{2-x}Sr_xCuO_{4+\delta}$ ($0 \leq x \leq 0.33$, $0 \leq \delta \leq 0.12$), 19:7029 (R;US)
LANTHANUM SILICATES
Effect of temperature and recoil-energy spectra on irradiation-induced amorphization in $Ca_2La_8(SiO_4)_6O_2$, 19:7070 (R;US)
LASER FUSION REACTORS
Optimization of the National Ignition Facility primary shield design, 19:7898 (R;US)
LASER ISOTOPE SEPARATION
Innovative lasers for uranium isotope separation: Progress report for the period September 1, 1989–May 31, 1990, 19:6122 (R;US)
Innovative lasers for uranium isotope separation: [Progress report], 19:6123 (R;US)
LASER MATERIALS
Transient radiation-induced absorption in laser materials, 19:7073 (R;US)
Transient radiation-induced absorption in the materials for a GSGG laser, 19:7078 (R;US)
LASER RADIATION
Characterization of thermal plasmas by laser light scattering, 19:7134 (RA;US)
Investigations into ultraviolet matrix-assisted laser desorption, 19:7129 (R;US)
Laser-induced breakdown in heavy water: search for nuclear fusion evidence, 19:7825 (R;RU)
Transient radiation-induced absorption in the materials for a GSGG laser, 19:7078 (R;US)
Travel to Japan and Greece to attend and present invited talks at the International Union of Materials Research Society – The 3rd International Conference on Advanced Materials: Foreign trip report, August 21, 1993–September 17, 1993, 19:7781 (R;US)
LASER-PRODUCED PLASMA
Travel to Japan and Greece to attend and present invited talks at the International Union of Materials Research Society – The 3rd International Conference on Advanced Materials: Foreign trip report, August 21, 1993–September 17, 1993, 19:7781 (R;US)
LASERS
See also X-RAY LASERS
Lasers for the radioactive decontamination of concrete, 19:6207 (R;US)
LATEX
Mechanism of the sensitization of radiation vulcanisation of rubber latex by mono-acrylates, 19:6321 (IA;AU)
LATTICE FIELD THEORY
Quantum Chromodynamics and nuclear physics at extreme energy density: Progress report, May 1992–April 1993, 19:7601 (R;US)
LATVIA
Energy conservation in Latvia, 19:6848 (RA;DK)
Issues and options analysis for rational energy management in Latvia, 19:6825 (RA;DK)
Issues and options in the energy sector in Latvia. Vol. 1: Background reports. Energy conservation in Latvia. Energy utilities and pricing, 19:6809 (R;DK)
LAUSANNE TOKAMAK
See TCA TOKAMAK
LAWRENCE BERKELEY LABORATORY
Chemical Sciences Division: Annual report 1992, 19:7088 (R;US)
Lawrence Berkeley Laboratory, Institutional Plan FY 1994–1999, 19:6797 (R;US)
LAWRENCE LIVERMORE LABORATORY
Electric utility system master plan, 19:6750 (R;US)
Energy and technology review, July 1993, 19:6912 (R;US)
Risk management at Lawrence Livermore National Laboratory, 19:7903 (R;US)
Site environmental report for 1992, 19:6243 (R;US)
LEAD
F/H seepage basin groundwater influent, effluent, precipitated sludge characterization task technical plan, 19:6217 (R;US)
LEAD 208
Investigation of giant resonances via photon decay, 19:7673 (R;US)
The widths of magnetic twist modes, 19:7679 (R;RU)
LEAD 208 TARGET
Heavy ion Coulomb excitation and gamma decay studies of the one and two phonon giant dipole resonances in ^{208}Pb and ^{209}Bi, 19:7704 (R;US)
LEAD 212
The measurement of the chemically mobile fraction of lead in soil using isotopic dilution analysis, 19:7103 (R;DE;In German)
LEAD BASE ALLOYS
Selection and characterization of lead alloys for use in the SDC EM Calorimeter, 19:7298 (R;US)
LEAD COMPOUNDS
Measurement of elemental speciation by liquid chromatography – inductively coupled plasma mass spectrometry (LC-ICP-MS) with the direct injection nebulizer (DIN), 19:7097 (R;US)
The measurement of the chemically mobile fraction of lead in soil using isotopic dilution analysis, 19:7103 (R;DE;In German)
LEAD IONS
Coordination chemistry of two heavy metals: I, Ligand preferences in lead(II) complexation, toward the development of therapeutic agents for lead poisoning: II, Plutonium solubility and speciation relevant to the environment, 19:7122 (R;US)
LEAD-ACID BATTERIES
Advanced electric-car batteries: Testing, 19:6764 (R;SE;In Swedish)
LEPTON REACTIONS
See also ELECTRON REACTIONS
Deep-inelastic operators in meson-nucleon theory, 19:7718 (R;RU;In Russian)
LEPTON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET
LEPTON REACTIONS
LEPTONS
See also ELECTRONS
NEUTRINOS
A search for the production of Direct Leptons in nucleon-nucleus and nucleus-nucleus collisions: Progress report, April 1, 1991–December 1, 1993, 19:7621 (R;US)
Energy distribution of the leptons in top decay to charged Higgs, 19:7669 (R;US)

New particle searches at CDF, 19:7626 (R;US)
Vector leptoquark production at hadron colliders, 19:7609 (R;US)

LEVEL DENSITY
See ENERGY LEVELS

LEVEL INDICATORS
In-situ measurement of response time of RTDs and pressure transmitters in nuclear power plants, 19:6660 (RA;US)

LEVEL SCHEMES
See ENERGY LEVELS

LEVITATED TRAINS
Expansion joint for guideway for magnetic levitation transportation system, 19:6865 (PA;US)
Three-dimensional finite element modeling of a magnet array spinning above a conductor, 19:6915 (R;US)

LEVULINIC ACID
The thermochemical conversion of cellulosic biomass to high value chemicals and fuel additives, 19:6894 (RA;US)

LI-DRIFTED SI DETECTORS
Lithium drifted silicon detector fabrication on gettered Floating-Zone silicon, 19:7330 (R;US)

LIDAR

HILACS
LINEAR COLLIDERS
ORELA
QUADRUPOLE LINACS
STANFORD LINEAR COLLIDER
WAKEFIELD ACCELERATORS
A 50-MeV mm-wave electron linear accelerator system for production of tunable short wavelength synchrotron radiation, 19:7198 (R;US)
Accelerator complex for unstable beams at INS, 19:7257 (RA;US)
Linac Coherent Light Source (LCLS) at 2–4 nm using the SLAC linac, 19:7210 (R;US)
Some aspectgs of linacs as applied to the ISL benchmark facility, 19:7252 (RA;US)

LINEAR COLLIDERS
A test accelerator for the next linear collider, 19:7209 (R;US)
An "NLC-style" short bunch length compressor in the SLAC linac, 19:7280 (R;US)
Overview of the Final Focus Test Beam alignment system, 19:7279 (R;US)
Simulations of low energy e^+e^- particle backgrounds, 19:7227 (R;US)
Stochastic cooling requirements for a muon collider, 19:7214 (R;US)

LINEAR PROGRAMMING
Research on primal-dual interior point algorithms for mathematical programming: Final technical report, August 1991–August 1993, 19:7909 (R;US)

LINERS
The probability of Mark-I containment failure by melt-attack of the liner, 19:6730 (R;US)

LIQUID ASPHALT
See PETROLEUM RESIDUES

LIQUID COLUMN CHROMATOGRAPHY
Chemically modified polymeric resins for separation of cations, organic acids, and small polar moleculea by high performance liquid chromatography, 19:7100 (R;US)
Measurement of elemental speciation by liquid chromatography – inductively coupled plasma mass spectrometry (LC-ICP-MS) with the direct injection nebulizer (DIN), 19:7097 (R;US)

LIQUID EFFLUENTS
See LIQUID WASTES

LIQUID FLOW
The effect of turbulence on the stability of liquid jets and the resulting droplet size distributions: Third quarterly technical report, July 1, 1993–September 30, 1993, 19:7173 (R;US)

LIQUID FUELS
See also DIESEL FUELS
FUEL OILS
GASOHOL
GASOLINE
Ablative fast pyrolysis: Converting wood, agricultural wastes and crops into energy and chemicals, 19:6402 (RA;US)
Development of measurement capabilities for the thermophysical properties of energy-related fluids: Annual report, December 1, 1990–November 30, 1991, 19:7092 (R;US)
The development of commercial scale Rapid Thermal Processing of biomass, 19:6398 (RA;US)

LIQUID METAL COOLANT
See LIQUID METALS

LIQUID METAL TEST FACILITIES
See TEST FACILITIES

LIQUID METALS
Liquid metal MHD and heat transfer in a tokamak blanket slotted coolant channel, 19:7845 (R;US)
LIQUID SCINTILLATION DETECTORS
Progress report of a research program in experimental and theoretical high energy physics, 1 June 1992–May 31, 1993, 19:7311 (R;US)
LIQUID WASTES
See also WASTE WATER
Functions and requirements for subsurface barriers used in support of single-shell tank waste retrieval, 19:6297 (R;US)
Radioactive contamination in liquid wastes discharged to ground at separations facilities through December 1961, 19:6165 (R;US)
Tank 29 salt removal method using slurry pump agitation, 19:6232 (R;US)
LIQUIDS
See also COAL LIQUIDS
LIQUID METALS
Neutron scattering from solutions, 19:7768 (IA;CH)
LITEK LAMP
See FLUORESCENT LAMPS
LITHIUM
Wall conditioning experiments on TFTR using impurity pellet injection, 19:7894 (R;US)
LITHIUM ALLOYS
An anodic dissolution-based mechanism for the rapid cracking, "pre-exposure" phenomenon demonstrated by Al-Li-Cu alloys, 19:6997 (R;US)
Reference electrodes for solid polymer electrolytes, 19:6759 (R;US)
LITHIUM FLUORIDES
Emission properties of gamma irradiated LiF crystals excited in F absorption band by excimer laser, 19:7778 (RA;IT)
Optical gain of F2 and F3 centers in thin and colored layers of LiF, 19:7779 (RA;IT)
LITHIUM HALIDES
See also LITHIUM FLUORIDES
A shuttle mechanism for molten-electrolyte lithium batteries, 19:6760 (R;US)
LITHIUM HYDROXIDES
Photochemistry in constrained spaces: Zeolites and layered double metal hydroxides: Progress report, August 1, 1992–September 15, 1993, 19:7128 (R;US)
LITHIUM ISOTOPES
Hyperfiltration-induced fractionation of lithium isotopes in geologic systems: Progress report, April 1, 1992–June 30, 1993, 19:7517 (R;US)
LMFBR TYPE REACTORS
See also SNR REACTOR
A nonlinear dynamic model of a once-through, helical-coil steam generator, 19:6627 (R;US)
Characterization of the sodium void reactivity effect for advanced liquid metal reactor fuels, 19:6628 (R;US)
LOAD (DYNAMIC)

LOSS OF COOLANT
Study on development and assessment of severe accident management strategies, 19:6654 (R;KR;In Korean)
LOST CIRCULATION
Status of lost circulation research, 19:6526 (RA;US)
LOW ALLOY STEELS
An experimental study on the effects of compressive stress on the fatigue crack growth of low-alloy steel, 19:7007 (R;US)
LOW BTU GAS
The R.D.F. gasifier of Florentine area, 19:6906 (RA;US)
LOW-LEVEL RADIOACTIVE WASTES
DOE site performance assessment activities: Radioactive Waste Technical Support Program, 19:6152 (R;US)
Low level transuranic waste assay by photon interrogation and neutron counting, 19:6144 (R;FR;In English, French)
Mixed waste solidification testing on polymer and cement-based waste forms in support of Hanford's WRAP 2A facility, 19:6209 (R;US)
Molten salt oxidation of mixed wastes: Separation of radioactive materials and Resource Conservation and Recovery Act (RCRA) materials, 19:6145 (R;US)
Projecting the range of potential future climate change as an aid in the assessment of the effectiveness of the Hanford Site Permanent Isolation Barrier, 19:6293 (R;US)
Prospects for vitrification of mixed wastes at ANL-E, 19:6141 (R;US)
WRAP 2A product specification, 19:6211 (R;US)
LOWER HYBRID CURRENT DRIVE
Travel to Caderache, France for visit with the Lower Hybrid Current Drive Modeling Group: Foreign trip report, June 19–28, 1993, 19:7820 (R;US)
LUBRICANTS
See also LUBRICATING OILS
Accelerated screening methods for determining chemical and thermal stability of refrigerant-lubricant mixtures: Part 2, Experimental comparison and verification of methods: Quarterly technical progress report, 1 March 1993–30 June 1993, 19:7111 (R;US)
Compatibility of refrigerants and lubricants with engineering plastics: Final report, 19:7047 (R;US)
Development of measurement capabilities for the thermophysical properties of energy-related fluids: Annual report, December 1, 1990–November 30, 1991, 19:7092 (R;US)
Solubility, viscosity and density of refrigerant/lubricant mixtures: Quarterly technical progress report, 1 July 1993–30 September 1993, 19:7049 (R;US)
LUBRICATING OILS
Oxidation phenomenons of lubricating oils for gasoline engines working at high temperature, 19:6095 (R;FR;In French)
LUMBER INDUSTRY
See WOOD PRODUCTS INDUSTRY
LWR TYPE REACTORS

SPENT FUELS
Fission product behavior in gas-cooled reactors and fuel performance: Foreign trip report, June 19–27, 1993, 19:6622 (R;US)
Uranium chloride extraction of transuranium elements from LWR fuel, 19:6126 (PA;US)
World nuclear capacity and fuel cycle requirements, November 1993, 19:6643 (R;US)

NUCLEAR MATERIALS MANAGEMENT
Applications of portable gamma-ray technologies to quantitative measurements in-situ, 19:6310 (R;US)

NUCLEAR PHYSICS
Future directions in particle and nuclear physics at multi-GeV hadron beam facilities, 19:7561 (R;US)
Research in nuclear physics: Progress report, 1992–1993, 19:7670 (R;US)
Theoretical nuclear physics: Progress report, July 1, 1992–June 30, 1993, 19:7671 (R;US)
[Electroweak and other interactions in medium-energy nuclear physics]: Progress report, 19:7564 (R;US)

NUCLEAR POWER PLANTS
Aging
Modeling the degradation of nuclear components, 19:6705 (R;US)
NRC Research Program on Plant Aging: Listing and summaries of reports issued through September 1993: Revision 4, 19:6658 (R;US)
Survey and evaluation of aging risk assessment methods and applications, 19:6722 (R;US)

Air Filters
Design and construction of a type testing and production test facility for HEPA filters to be installed in ventilation systems of German nuclear power plants, 19:7146 (R;DE;In German)

Capacity
World nuclear capacity and fuel cycle requirements, November 1993, 19:6643 (R;US)

Computerized Control Systems
Computer software review procedures, 19:6676 (RA;US)

Containment Buildings
Experiments to evaluate behavior of containment piping bellows under severe accident conditions, 19:6670 (R;US)

Containment Shells
Experiments to evaluate behavior of containment piping bellows under severe accident conditions, 19:6670 (R;US)

Control Theory
A survey on the technologies and cases for the cognitive models of nuclear power plant operators, 19:6674 (R;KR;In Korean)

Electric Generators
Empirical Bayes estimation of the average reliability of nuclear power plant emergency diesel generators to load-run upon demand, 19:6657 (R;US)

Health Hazards
Risk perspectives for TOPAZ II flight mission, 19:6740 (R;US)

Inspection
Manual of quality assurance programme auditing, 19:6638 (I;CZ;In Czech)
The use of probabilistic risk assessment to satisfy the Nuclear Regulatory Commission's maintenance rule, 19:6637 (R;US)

Licensing Regulations
License renewal, 19:6640 (RA;US)
Regulatory requirements for replacement of analog systems with digital upgrades, 19:6668 (RA;US)

Maintenance
The use of probabilistic risk assessment to satisfy the Nuclear Regulatory Commission's maintenance rule, 19:6637 (R;US)

Man-Machine Systems
A survey on the technologies and cases for the cognitive models of nuclear power plant operators, 19:6674 (R;KR;In Korean)

Meltdown
A simplified model of aerosol scrubbing by a water pool overlying core debris interacting with concrete: Final report, 19:6726 (R;US)

Personnel
TAP 1: Training Program Manual, 19:6719 (R;US)

Pumps
The selection of pumps and valves for an optimum system performance, 19:6653 (R;KR;In Korean)

Quality Assurance
Manual of quality assurance programme auditing, 19:6638 (I;CZ;In Czech)

Radiation Doses
Occupational radiation exposure at commercial nuclear power reactors and other facilities 1992: Twenty-fifth annual report, Volume 14, 19:7505 (R;US)

Reactor Accidents
Summary of uncertainty analysis of dispersion and deposition modules of the MACCS and COSYMA consequence codes: A joint USNRC/CEC study, 19:6741 (R;US)
Travel to Lithuania and Romania to discuss emergency response plans for reactor accidents: Foreign trip report, July 16–31, 1993, 19:6712 (R;US)

Reactor Components
In-situ measurement of response time of RTDs and pressure transmitters in nuclear power plants, 19:6660 (RA;US)
NRC Research Program on Plant Aging: Listing and summaries of reports issued through September 1993: Revision 4, 19:6658 (R;US)
Sensitivity and uncertainty analyses in aging risk-based prioritizations, 19:6703 (R;US)
Survey and evaluation of aging risk assessment methods and applications, 19:6722 (R;US)

Reactor Control Systems
Regulatory requirements for replacement of analog systems with digital upgrades, 19:6668 (RA;US)

Reactor Licensing
Early Site Permit Demonstration Program: Recommendations for communication activities and public participation in the Early Site Permit Demonstration Program, 19:6642 (R;US)
License renewal, 19:6640 (RA;US)

Reactor Monitoring Systems
Predictive maintenance of electrical components through computer-controlled acquisition and trending of standard circuit parameters, 19:6664 (RA;US)

Reactor Protection Systems
Software reliability and safety in nuclear reactor protection systems, 19:6731 (R;US)

Reactor Safety
Modeling the degradation of nuclear components, 19:6705 (R;US)
Travel to Vienna, Austria for meeting on the safety of VVER 440/230 NPPs: Foreign trip report, December 9–13, 1991, 19:6709 (R;US)

Risk Assessment
Analysis of extreme top event frequency percentiles based on fast probability integration, 19:6735 (R;US)
Coherent sampling of multiple branch event tree questions, 19:6733 (R;US)
Risk perspectives for TOPAZ II flight mission, 19:6740 (R;US)

Seismic Noise
Investigation of spectral and spatial microseismic noise characteristics around Kozloduy NPP (Bulgaria), 19:7445 (RA;CZ)

Supply and Demand
World nuclear capacity and fuel cycle requirements, November 1993, 19:6643 (R;US)

Valves

OSHA
See US OSHA

OVERTHRUST BELT
See WESTERN US OVERTHRUST BELT

OXALATES
Variation of stability constants of thorium and uranium oxalate complexes with ionic strength, 19:7127 (R;US)

OXETANE
See ETHERS
OXIRANS
See EPOXIDES
OXYGEN
Analysis of benchmark critical experiments with ENDF/B-VI data sets, 19:6651 (R;US)
Electrochemical thinning of silicon, 19:7192 (PA;US)
Infrared diode laser studies of the products from the reaction $CH_2(\tilde{X}^3B_1) + O_2$ and from the near-UV photolysis of CH_3NCS, 19:7131 (R;US)
Initial data testing of ENDF/B-VI for thermal reactor benchmark analysis, 19:6600 (R;US)
Magnetic, optical and charge-transfer spectra of antiferromagnetic solid α-O_2 and "paramagnetic" solid β-O_2: A small-cluster, many-electron calculation, 19:7744 (R;US)
Oxygen reduction at a YSZ interface with cathode materials $La_{1-x}(Ca \text{ or } Sr)_xMnO_3$ or $Y_{1-x}CaMnO_3$, 19:6840 (R;US)
[Reactive collisions of high-temperature systems]: [Technical progress report 1990], 19:7746 (R;US)
OXYGEN 18
Beta-delayed (alpha) particle emission; A probe of weak interactions in nuclei, 19:7698 (RA;US)
OXYGEN 18 REACTIONS
Shape changes and isospin purity in highly excited light mass nuclei (Gamma spectra, angular distribution coefficients), 19:7714 (R;US)
OXYGEN EFFECT (RADIOBIOLOGY)
See OXYGEN
OXYGEN HYDRIDES
See WATER
OXYGEN IONS
Determination of atomic data pertinent to the Fusion Energy Program: Progress report for FY 92, 19:7805 (R;US)
Low energy ion-molecule reactions and chemiionization kinetics: Progress report, February 1, 1991–January 31, 1994, 19:7747 (R;US)
Scaling 2XIIB impurity radiation to BPNS, 19:7896 (R;US)
OZONE
Modeling of the deposition processes during dew formation in complex structures: Contribution to EUROTRAC subproject BIATEX. Final report, 19:7407 (R;DE;In German)
Ozone production at a rural site in Georgia during the summer 1992 SOS campaign, 19:7387 (R;US)
OZONE LAYER
Monitoring of the ozone layer: A Norwegian and global perspective, 19:7417 (R;NO;In Norwegian)

P

P CODES
PHAZE: Parametric Hazard Function Estimation, 19:7918 (CM;US)
P INVARIANCE
Data on parity violation in the compound nucleus and its interpretation, 19:7592 (R;US)
PACIFIC NORTHWEST REGION
See USA
PACIFIC OCEAN
Global survey of carbon dioxide in the ocean: Progress report, January 1, 1993–December 31, 1993, 19:7468 (R;US)
PACKAGING RULES
SOR/92-150, 27 February 1992, Transport Packaging of Radioactive Materials, amendment, 19:6315 (I;CA;In English, French)
PAINTS
Study of the adhesion between paint film and metal spraying layer, 19:6956 (IA;JP;In Japanese)
PALLADIUM
Fast-neutron scattering from vibrational palladium nuclei, 19:7689 (R;US)
Geometric structures of thin film: Pt on Pd(110) and NiO on Ni(100), 19:6967 (R;US)
Low severity upgrading of F-T waxes with solid superacids: Quarterly report, June 1, 1993–August 31, 1993, 19:6036 (R;US)
Recovery of hydrogen from impurities using a palladium membrane reactor, 19:7881 (R;US)
PALLADIUM 110 TARGET
Analysis of compound nucleus formation in reactions $^{100}+^{100}Mo$ and $^{110}Pd+^{110}Pd$. Fusion barrier, 19:7678 (R;RU)
PALLADIUM COMPLEXES
The catalytic inactivation of cellulase enzyme components by palladium complexes, 19:7483 (R;US)
PALLADIUM HYDRIDES
Electronic charge distribution of sodium substituted palladium hydride, $NaPd_3H_2$, 19:7038 (R;US)
PANINDCO PROCESS
See COAL GASIFICATION
PANTEX PLANT
Pantex lightning study recommendations report, 19:7153 (R;US)
The use of benchmarking at the U.S. Department of Energy's Pantex Plant, 19:7374 (R;US)
PAPER INDUSTRY
Energy efficient liquid ring vacuum pump installations in the paper industry, 19:6877 (I;GB)
Energy-efficient manufacture of groundwood and refiner groundwood, 19:6882 (R;FI;In Finnish)
New possibilities for energy conservation in mechanical pulping, 19:6881 (R;FI;In Finnish)
The growth and harvesting of kenaf and its conversion to products: Case history of an industrial biomass crop, 19:6361 (RA;US)
Waste paper and pulp sludge as feedstock for ethanol production, 19:6388 (RA;US)
PARAFFINS

INHOMOGENEOUS PLASMA
LASER-PRODUCED PLASMA
Anti-corrosion of plasma sprayed coatings, 19:6957 (IA;JP;In Japanese)
Application of dynamic response analysis to JET heat pulse data, 19:7827 (R;GB)
Diagnostics of particle genesis and growth in RF silane plasmas by ion mass spectrometry and light scattering, 19:7832 (R;CH)
Kinetic resonance damping rate of the toroidal ion temperature gradient mode, 19:7814 (R;US)
Time-resolved measurements of highly-polymerised negative ions in rf silane plasma deposition experiments, 19:7829 (R;CH)

PLASMA (QUARK)
See QUARK MATTER

PLASMA ACCELERATORS
See PLASMA GUNS

PLASMA ARC SPRAYING
Characterization of electrostatic separation for metal/ceramics mixed powders, 19:7014 (IA;JP;In Japanese)
Development of multi coated steel by thermal spraying-hot rolling method. 2, 19:6947 (IA;JP;In Japanese)
High speed arc spray process, 19:7142 (IA;JP;In Japanese)
Influence of the temperature rise of Fe-C base alloy deposits during thermal spraying on their structures and mechanical properties, 19:6948 (IA;JP;In Japanese)

PLASMA DIAGNOSTICS
Diagnostics of particle genesis and growth in RF silane plasmas by ion mass spectrometry and light scattering, 19:7832 (R;CH)
Heavy Neutral Beam Probe for edge plasma analysis in Tokamaks: Annual progress report, December 1, 1992–November 30, 1993, 19:7810 (R;US)
Time-resolved measurements of highly-polymerised negative ions in rf silane plasma deposition experiments, 19:7829 (R;CH)

PLASMA DISRUPTION
Modelling erosion damage from low-energy plasma gun simulations of disruptions, 19:7846 (R;US)
Travel to Russia for research on vacuum ultraviolet spectra of plasma generators for Tokamak disruption simulations: Foreign trip report, September 12–October 15, 1993, 19:7821 (R;US)

PLASMA DRIFT
Shear flow generation from the interaction of neoclassical and drift wave transport processes, 19:7818 (R;US)
The dynamics of interacting nonlinearities governing long wavelength driftwave turbulence, 19:7809 (R;US)

PLASMA GUNS
High speed arc spray process, 19:7142 (IA;JP;In Japanese)

PLASMA HEATING
An experimental study of the harmonics generated during Alfven wave heating in TCA, 19:7828 (R;CH)
Cyclotron subharmonics resonant (CSR) heating, 19:7839 (R;US)
Stochastic plasma heating by electrostatic waves: a comparison between a particle-in-cell simulation and a laboratory experiment, 19:7831 (R;CH)

PLASMA IMPURITIES
Fuel ion rotation measurement and its implications on H-mode theories, 19:7824 (R;US)
Travel to Austria and the Netherlands to attend the 12th Meeting of the Atomic and Molecular Data Centers and ALADDIN Network: Foreign trip report, September 18–29, 1993, 19:7835 (R;US)

PLASMA INSTABILITY
Nonlinear instabilities relating to negative-energy modes, 19:7826 (R;DE)
Reduced Braginskii equations, 19:7817 (R;US)

PLASMA JETS
Characterization of thermal plasmas by laser light scattering, 19:7134 (RA;US)

PLASMA OSCILLATIONS
See PLASMA WAVES

PLASMA SIMULATION
δf Algorithm, 19:7816 (R;US)
Two dimensional self-consistent fluid simulation of rf inductive sources, 19:7559 (R;US)

PLASMA WAVES
Self-similar regimes of subsonic Langmuir wave collapse, 19:7794 (R;RU)

PLASTICS
See also POLYSTYRENE
TEFLON
THERMOPLASTICS
Compatibility of refrigerants and lubricants with engineering plastics: Final report, 19:7047 (R;US)
Resonant holographic measurements of laser ablation plume expansion in vacuum and argon gas backgrounds, 19:7754 (R;US)

PLATES (FUEL)
See FUEL PLATES

PLATING
Multi-layer coating processing by thermal spraying using wet plating, 19:6955 (IA;JP;In Japanese)

PLATINUM
Geometric structures of thin film: Pt on Pd(110) and NiO on Ni(100), 19:6967 (R;US)
Low severity upgrading of F-T waxes with solid superacids: Quarterly report, June 1, 1993–August 31, 1993, 19:6036 (R;US)

PLESIOTHERAPY
See RADIOTHERAPY
PLUTONIC ROCKS
See also GRANITES
Geology, alteration, and magmatic-hydrothermal history of The Geysers felsite – potential applications for exploration and development, 19:6498 (RA;US)
PLUTONIUM
Application of non-radiometric methods to the determination of plutonium: Literature review conducted for the Buried Waste Integrated Program, 19:7095 (R;US)
Effect of nitrocarburizing on shape of titanium alloy parts, 19:7008 (R;US)
Geomorphology of plutonium in the Northern Rio Grande, 19:7477 (R;US)
High-value use of weapons-plutonium by burning in molten salt accelerator-driven subcritical systems or reactors, 19:6172 (R;US)
Improved implementations of two gamma-ray measurement methods, 19:6309 (R;US)
Radioactive contamination in liquid waste discharged to ground at the separations facilities through December, 1964, 19:6142 (R;US)
Study of Pu consumption in Advanced Light Water Reactors: Evaluation of GE Advanced Boiling Water Reactor plants: Compilation of Phase 1B task reports, 19:6595 (R;US)
The integration of human factors into the risk assessment of a nuclear device arming and firing system, 19:7383 (R;US)
The status of United States R&D programs in safeguards and physical protection, 19:6924 (R;US)

PEPTIDES
^{14}C-AMS quantification of biomolecular interactions using microbore and plate separations, 19:7487 (R;US)

PROTON BEAMS
On possibility of application of RFQ focusing in proton linacs at energies 100 MeV and above, 19:7219 (R;RU;In Russian)
Operation of the bent single crystal in intense beams, 19:7220 (R;RU;In Russian)

PROTON PRECIPITATION
Study on the precipitations of high-energy charged particles in the Brazilian anomaly region, 19:7557 (R;RU;In Russian)

PROTON REACTIONS
Excitation of the reaction of ^{123}I, ^{123}Xe and ^{123}Cs radionuclides production: Experimantal and calculational data, 19:7683 (R;RU;In Russian)

PROTON-ANTIPROTON INTERACTIONS
A search for rapidity gap events in $p\bar{p}$ collisions at D0, 19:7633 (R;US)
An analysis of monojet data in $p\bar{p}$ collisions at $\sqrt{s}$ = 1.8 TEV, 19:7618 (R;US)
Measurement of the elastic, total and diffraction cross sections at tevatron energies, 19:7635 (R;US)
Measurement of the elastic, total and single diffraction cross sections at Tevatron energies, 19:7625 (R;US)
Properties of W + jet events in proton-antiproton collisions at 1.8 TeV, 19:7647 (R;US)
Properties of events containing a photon and several jets seen in $p\bar{p}$ collisions at $\sqrt{s}$ = 1.8 TeV, 19:7619 (R;US)
Proton elecromagnetic form factor near PantiP threshold, 19:7642 (R;RU;In Russian)
Search for excited quarks in $p\bar{p}$ collisions at $\sqrt{s}$ = 1.8 TeV, 19:7632 (R;US)

PROTON-NEUTRON INTERACTIONS
Theoretical and computational studies in intermediate energy nuclear physics: Progress report, November 1, 1992–October 31, 1993 (Dept. of Physics and Astronomy, Ohio Univ., Athens, Ohio), 19:7716 (R;US)

PROTON-PROTON INTERACTIONS
Angular dependence of parton-parton scattering extracted from hadron pair production in pp collisions at $\sqrt{s}$=11.5 GeV, 19:7639 (R;RU)

PROTONS
Angular dependence of parton-parton scattering extracted from hadron pair production in pp collisions at $\sqrt{s}$=11.5 GeV, 19:7639 (R;RU)
Backward emission of protons in Au+Au collisions at 11.7 A.GeV/c, 19:7739 (R;US)
Deep Inelastic Scattering results from the first year of HERA operation, 19:7611 (R;US)
Proton elecromagnetic form factor near PantiP threshold, 19:7642 (R;RU;In Russian)
Results on structure functions from fixed-target experiments, 19:7668 (R;US)
The E2/M1 mixing ratio in the excitation of the Δ from polarized photo-reactions, 19:7614 (R;US)

PSI RESONANCES

RADIOACTIVE EFFLUENTS
1993 International conference on nuclear waste management and environmental remediation, Prague, Czech Republic, September 5–11, 1993: Combined foreign trip report, 19:6183 (R;US)
Annual summary report of the Surveillance and Maintenance activities at Oak Ridge National Laboratory for FY 1993, 19:6178 (R;US)
Comparison of accelerator-based with reactor-based waste transmutation schemes, 19:6175 (R;US)
Developing a scarifier to retrieve radioactive waste from Hanford single-shell tanks, 19:6194 (R;US)
In situ vitrification: Providing a comprehensive solution for remediation of contaminated soils, 19:6185 (R;US)
Logistics modeling of future solid waste storage, treatment, and disposal, 19:6189 (R;US)
Nuclear technology programs. Semiannual progress report, April–September 1991, 19:6137 (R;US)
Radioactive discharges and environmental monitoring: annual report for 1992, 19:6233 (R;GB)
Reaction sequences in simulated neutralized current acid waste slurry during processing with formic acid, 19:6191 (R;US)
Surface layer effects on waste glass corrosion, 19:6140 (R;US)
Test plan for dig-face characterization performance testing, 19:6159 (R;US)
Test plan for the Rapid Geophysical Surveyor, 19:6271 (R;US)
The Westinghouse Hanford Company Operational Environmental Monitoring Program CY-93, 19:6205 (R;US)
Transuranium elements leaching from simulated HLW glasses in synthetic interstitial claywater, 19:7447 (I;BE)

Travel to Japan to help JAERI scientists with design of burner reactors for nuclear waste transmutation: Foreign trip report, July 15–October 1, 1993, 19:6151 (R;US)
United States Department of Energy Richland Operations Office Environmental Protection Implementation Plan: November 9, 1993, to November 9, 1994, 19:6155 (R;US)

RADIOFREQUENCY SYSTEMS
See RF SYSTEMS

RADIOGRAPHY (BIOMEDICAL)
See BIOMEDICAL RADIOGRAPHY

RADIOISOTOPE HEAT SOURCES
Preliminary reentry safety assessment of the General Purpose Heat Source module for the Cassini mission: Aerospace Nuclear Safety Program, 19:6629 (R;US)

RADIOISOTOPE MIGRATION
See RADIONUCLIDE MIGRATION

RADIOISOTOPES
See also BETA DECAY RADIOISOTOPES
NEUTRON-DEFICIENT ISOTOPES
NEUTRON-RICH ISOTOPES
Assessment of unsaturated zone radionuclide contamination in the 200 areas of the Hanford site, Washington, 19:6246 (R;US)
Empirical distributions of radionuclides, from RWMIS data, 19:6158 (R;US)
Geothermal waste treatment biotechnology, 19:6535 (RA;US)
Production rates of terrestrial in-situ-produced cosmogenic nuclides, 19:7554 (R;US)
Samples for s- and p-process studies, 19:7702 (RA;US)
Simulations of terrestrial in-situ cosmogenic-nuclide production, 19:7555 (R;US)

RADIOLOGICAL PROTECTION
See RADIATION PROTECTION

RADIOMETERS
Radiative transfer through arrays of discrete surfaces, 19:6482 (RA;US)
The automated rotating shadowband spectroradiometer, 19:7352 (R;US)

RADIONUCLIDE MIGRATION
AREST model description, 19:6180 (R;US)
Development of the FMT chemical transport simulator: Advective transport sensitivity to aqueous density and mineral volume fraction coupled to phase compositions, 19:6242 (R;US)
Ecological risk assessment guidance for preparation of remedial investigation/feasibility study work plans, 19:6255 (R;US)
Evaluation of host rocks and background lithologies as secondary contributors to the uranium and rare-earth element source-term at the Needle's Eye natural analogue site, 19:7435 (R;GB)
Evaluation of the Atmospheric Release Advisory Capability emergency response model for explosive sources, 19:7424 (R;US)
Final report on the meteorological database, December 1944–1949: Hanford Environmental Dose Reconstruction Project, 19:7506 (R;US)
NUTRAN: Long-Term Repository Safety Analysis, 19:7919 (CM;US)
The AFTAC model integration project: An annual progress report: Revision 1, 19:7422 (R;US)
Travel to Vienna, Austria for meeting on modelling radionuclide transfer in the environment: Foreignn trip report, March 1–9, 1991, 19:7434 (R;US)

RADIONUCLIDE TRANSFER (IN ENVIRONMENT)
See RADIONUCLIDE MIGRATION

RADIONUCLIDES
See RADIOISOTOPES

RADIOSURGERY
See RADIOTHERAPY

RADIOTHERAPY
Experimental radiotherapy unit to be established at GSI in Darmstadt, 19:7493 (R;DE;In German)

RADIUM 226
Surface and subsurface cleanup protocol for radionuclides, Gunnison, Colorado, UMTRA project processing site: Final report: Revision 1, 19:6252 (R;US)

RADIUM ADDITIONS
See ALLOYS

RADIUM SILICATES
See SILICATES

RADON
Energy recovery ventilation as a radon mitigation method for Navy family housing in Guam, 19:7399 (R;US)
Properties and behaviour of radon and thoron and their decay products in the air, 19:7406 (RA;XE)
Radon and radon daughters metrology: basic aspects, 19:7315 (RA;XE)

RADON 220
Properties and behaviour of radon and thoron and their decay products in the air, 19:7406 (RA;XE)

RADON 222
Investigations of the connection between seismicity and ^{222}Rn-CO_2 content in spring waters at the Vogtland area (Germany): first results, 19:7475 (RA;CZ)

RAHYD PROCESS
See REPROCESSING

RAILGUN ACCELERATORS
Application of railgun principle to high-velocity hydrogen pellet injection for magnetic fusion reactor fueling: Progress report, October 1, 1992–September 30, 1993, 19:7853 (R;US)
Performance of an induction coil gun, 19:7205 (R;US)

RAMAN SPECTROSCOPY
Travel to USSR for symposium on Coherent Raman Spectroscopy: Foreign trip report, September 15–28, 1990, 19:7094 (R;US)

RATEMETERS (DOSE)
See DOSE RATEMETERS

RAYLEIGH WAVES
One-component surface waves in anisotropic linear elastic media, 19:6935 (RA;US)

RDF
See REFUSE DERIVED FUELS

REACTOR ACCIDENTS

Modeling the degradation of nuclear components, 19:6705 (R;US)
NRC Research Program on Plant Aging: Listing and summaries of reports issued through September 1993: Revision 4, 19:6658 (R;US)
Sensitivity and uncertainty analyses in aging risk-based prioritizations, 19:6703 (R;US)
Survey and evaluation of aging risk assessment methods and applications, 19:6722 (R;US)
System 80+™ Standard Design: CESSAR design certification: Volume 2: Amendment I, 19:6714 (R;US)
System 80+™ Standard Design: CESSAR design certification: Volume 3: Amendment I, 19:6715 (R;US)

REACTOR CONTROL SYSTEMS
Aging
Life extension activities and modernization strategies for instrumentation & control systems of research and power reactors in India, 19:6696 (RA;US)
Reactor safety instrumentation of Paks NPP (experience and perspective), 19:6617 (RA;US)
The effects of aging on electrical and I&C components: Results of US Nuclear Plant Aging Research, 19:6665 (RA;US)
Design
Account of requirements for modernization in VPBER-600 enhanced safety reactor instrumentation and control system development, 19:6667 (RA;US)
Instrumentation and control system upgrade plan for operating PWR plants in Japan, 19:6618 (RA;US)
Modernisation of the Borssele NPP reactor protection system, 19:6619 (RA;US)
Reactor safety instrumentation of Paks NPP (experience and perspective), 19:6617 (RA;US)
Digital Circuits
Addressing the susceptibility of digital systems to electromagnetic interference, 19:6669 (RA;US)
Human Factors Engineering
Strategy to safety grade systems replacements, 19:6679 (RA;US)
Installation
Experience in installing a microprocessor-based protection system on a UK nuclear power plant, 19:6678 (RA;US)
Licensing Regulations
Experience in installing a microprocessor-based protection system on a UK nuclear power plant, 19:6678 (RA;US)
Recent activities within Nuclear Electric related to the qualification of digital systems and the extension of maintenance intervals, 19:6621 (RA;US)
Regulatory perspective on digital instrumentation and control systems for future advanced nuclear power plants, 19:6641 (RA;US)
Maintenance
Life extension activities and modernization strategies for instrumentation & control systems of research and power reactors in India, 19:6696 (RA;US)
Software maintenance and re-validation for nuclear power plants, 19:6681 (RA;US)
Operation
Experience in installing a microprocessor-based protection system on a UK nuclear power plant, 19:6678 (RA;US)
Reliability
Instrumentation and control system upgrade plan for operating PWR plants in Japan, 19:6618 (RA;US)
Reliability analysis of microprocessor-based control and protection systems in nuclear power plants, 19:6682 (RA;US)
Strategy to safety grade systems replacements, 19:6679 (RA;US)
Retrofitting
Modernisation of the Borssele NPP reactor protection system, 19:6619 (RA;US)
Strategy to safety grade systems replacements, 19:6679 (RA;US)
Safety Analysis
Reliability analysis of microprocessor-based control and protection systems in nuclear power plants, 19:6682 (RA;US)
Safety Standards
The role of international standards in the design of modern I&C systems for nuclear power plants, 19:6680 (RA;US)
Standards
Qualification issues associated with the use of advanced instrumentation and control systems hardware in nuclear power plants, 19:6597 (RA;US)
Testing
The effects of aging on electrical and I&C components: Results of US Nuclear Plant Aging Research, 19:6665 (RA;US)
Validation
Qualification issues associated with the use of advanced instrumentation and control systems hardware in nuclear power plants, 19:6597 (RA;US)
Software maintenance and re-validation for nuclear power plants, 19:6681 (RA;US)

REACTOR CONTROL THEORY
See REACTOR KINETICS

REACTOR COOLING SYSTEMS

Final data report: Vertical process-pipe flow characteristics experiment, 19:6700 (R;US)
Regulatory analysis for the resolution of Generic Issue 143: Availability of chilled water system and room cooling, 19:6616 (R;US)
Technical Specification action statements requiring shutdown: A risk perspective with application to the RHR/SSW systems of a BWR, 19:6729 (R;US)

REACTOR CORES
A first look at LOCAs in the SBWR using RELAP5/MOD3, 19:6596 (RA;US)
System 80+™ Standard Design: CESSAR design certification: Volume 4: Amendment I, 19:6716 (R;US)

REACTOR FUEL ELEMENTS
See FUEL ELEMENTS

REACTOR FUELING
A technical report on the operational data analysis for kori-2, cycle-7, 19:6607 (R;KR;In Korean)
An analysis on the design of the permanent refueling water level indication system of UCN 3 and 4 plants, 19:6614 (R;KR;In Korean)
Nuclear design report for Ulchin nuclear power plant unit 1 cycle 5, 19:6610 (R;KR)
Reload safety evaluation report for kori nuclear power plant unit 4, cycle 8, 19:6645 (R;KR)
Reload safety evaluation report for yonggwang nuclear power plant unit 2 cycle 7, 19:6611 (R;KR)

REACTOR FUELS
See NUCLEAR FUELS

REACTOR INSTRUMENTATION
Account of requirements for modernization in VPBER-600 enhanced safety reactor instrumentation and control system development, 19:6667 (RA;US)
Qualification issues associated with the use of advanced instrumentation and control systems hardware in nuclear power plants, 19:6597 (RA;US)
Reactor safety instrumentation of Paks NPP (experience and perspective), 19:6617 (RA;US)
Recent activities within Nuclear Electric related to the qualification of digital systems and the extension of maintenance intervals, 19:6621 (RA;US)
The effects of aging on electrical and I&C components: Results of US Nuclear Plant Aging Research, 19:6665 (RA;US)
US utility I&C upgrade initiative, 19:6677 (RA;US)
Validation of on-line monitoring techniques for in-situ testing of calibration drift of process instrumentation channels in nuclear power plants, 19:6663 (RA;US)

REACTOR INTERNALS
Potential high fluence response of pressure vessel internals constructed from austenitic stainless steels, 19:6988 (R;US)

REACTOR KINETICS
Analysis of benchmark critical experiments with ENDF/B-VI data sets, 19:6651 (R;US)
Initial data testing of ENDF/B-VI for thermal reactor benchmark analysis, 19:6600 (R;US)
New ENDF/B-V nuclear data library for WIMS-D4M, 19:6687 (R;US)
Testing WIMS-D4M cross sections and the ANL ENDF/B-V 69 group library: Results from global diffusion and Monte Carlo calculations compared with measurements in the Romanian 14-MW TRIGA reactor, 19:6686 (R;US)

REACTOR LICENSING
Early Site Permit Demonstration Program: Recommendations for communication activities and public participation in the Early Site Permit Demonstration Program, 19:6642 (R;US)

REACTOR MONITORING SYSTEMS
The role of international standards in the design of modern I&C systems for nuclear power plants, 19:6680 (RA;US)

REACTOR NOISE
Anomaly detection in OECD Benchmark data using co-variance methods, 19:6650 (R;HU)
REACTOR OPERATION
A technical report on the operational data analysis for kori-2, cycle-7, 19:6607 (R;KR;In Korean)
REACTOR PHYSICS
The depletion computer code ORIGEN-JUEL-II, 19:6647 (R;DE)
REACTOR PROTECTION SYSTEMS
Modernisation of the Borssele NPP reactor protection system, 19:6619 (RA;US)
Reliability analysis of microprocessor-based control and protection systems in nuclear power plants, 19:6682 (RA;US)
Software reliability and safety in nuclear reactor protection systems, 19:6731 (R;US)
The role of international standards in the design of modern I&C systems for nuclear power plants, 19:6680 (RA;US)
REACTOR SAFETY
Modeling the degradation of nuclear components, 19:6705 (R;US)
Nuclear Safety Review 1991, 19:6594 (I;CZ;In Czech)
The European source term code ESTER - basic ideas and tools for coupling of ATHLET and ESTER: Final report. Preparing the coupling of ATHLET and ESTER, 19:6720 (R;DE;In German)
Title I wind/tornado design guidelines for new production reactors, 19:6743 (R;US)
Travel to Cadarache, France to review the preliminary transient code input data for the Fast Flux Test Facility: Foreign trip report, July 14–21, 1991, 19:6710 (R;US)
REACTOR VESSELS
Study on severe fuel damage and in-vessel melt progression, 19:6655 (R;KR;In Korean)
Travel to Europe to visit fracture technology research centers and a nuclear reactor fabrication facility: Foreign trip report, May 29–June 12, 1993, 19:6985 (R;US)
REACTORS

RESINS
Chemically modified polymeric resins for solid-phase extraction and group separation prior to analysis by liquid or gas chromatography, 19:7101 (R;US)
Dual cure low-VOC coating process: Phase 3, Semi-annual report, April 1, 1992–September 30, 1992, 19:6868 (R;US)
Hydrodynamic controls on particle transport through heterogeneous porous media: Technical progress report, 19:7051 (R;US)

RESISTAL
See COPPER BASE ALLOYS

RESONANCE CAVITIES
See CAVITY RESONATORS

RESONANCE STATES
See ENERGY LEVELS

RESOURCE MANAGEMENT
Proposed modifications to the Lower Mokelumne River Project, California: FERC Project No. 2916-004: Final environmental impact statement, 19:6782 (R;US)
Short-rotation forestry for energy production in Hawaii, 19:6333 (RA;US)

RESOURCE RECOVERY FACILITIES
Process and design considerations for the anaerobic digestion of municipal solid waste, 19:6369 (RA;US)

RESPIRABLE DUSTS
See DUSTS

RESPONSE FUNCTIONS
Development of fast-running thermal and structural response models for probabilistic analysis of complex systems, 19:7375 (R;US)

REVERSE-FIELD PINCH
Fluctuation and transport reduction in a reversed field pinch by inductive poloidal current drive, 19:7801 (R;US)
Measurement of magnetic fluctuation induced energy transport, 19:7798 (R;US)
Theoretical reversed field pinch and tokamak studies: Progress report, November 1, 1992–June 10, 1993, 19:7803 (R;US)

RF SYSTEMS
Travel to Japan to attend the US-Japan RF Heating Technology Workshop: Foreign trip report, February 24–March 9, 1991, 19:7862 (R;US)

RHO-1500 RESONANCES
See MESONS

RHO-1700 RESONANCES
See MESONS

RICE
Conversion of rice hulls to diesel fuel, 19:6379 (RA;US)

RICHLAND FFTF REACTOR

RINGS (STORAGE)
See STORAGE RINGS

RISER CRACKING
See COAL LIQUEFACTION

RISK ANALYSIS
See RISK ASSESSMENT

RISK ASSESSMENT
Analysis of extreme top event frequency percentiles based on fast probability integration, 19:6735 (R;US)
Is probability of frequency too narrow?, 19:7929 (R;US)
Technology and society: Impact and adjustment perspectives, 19:6781 (R;IT)
Travel to Russia for coordination meetings for the Cooperative Program in Surety Technologies: Foreign trip report, July 3–15, 1993, 19:6264 (R;US)
Uses of zero-one sampling in probabilistic risk assessment, 19:6599 (R;US)
[Environmental Hazards Assessment Program annual report, June 1992–June 1993]: Survey of environmental management training coordinators: Risk assessment/risk management training needs, 19:6263 (R;US)

RISKS
See HAZARDS

RIVERS
See also COLUMBIA RIVER
Application of the Ferris test methods for estimating hydraulic properties near a river boundary, 19:6192 (R;US)
Juvenile passage program: A plan for estimating smolt travel time and survival in the Snake and Columbia Rivers, 19:7482 (R;US)

Proposed modifications to the Lower Mokelumne River Project, California: FERC Project No. 2916-004: Final environmental impact statement, 19:6782 (R;US)

ROAD TRANSPORT
Alternative intersection design. A possible way of reducing air pollutant emissions from road and street traffic, 19:6866 (R;SE)

ROADS
Production of low-cost calcium magnesium acetate (CMA) as an environmentally friendly deicer from cheese whey, 19:6891 (RA;US)
Quarterly environmental radiological survey summary: First quarter 1993, 100, 200, 300, and 600 Areas, 19:7462 (R;US)

ROBOTS
Graphical programming at Sandia National Laboratories, 19:7154 (R;US)
Periodic components of hand acceleration/deceleration impulses during telemanipulation, 19:6131 (R;US)
Some considerations on robotics for environmental friendliness, 19:7143 (R;US)

ROCK DRILLING
Program plan for the development of advanced synthetic-diamond drill bits for hard-rock drilling, 19:7185 (R;US)

ROCK SALT
See SALT DEPOSITS

ROCK-FLUID INTERACTIONS
Development and verification of a numerical technique for coupled hydromechanical phenomena in rocks, 19:7520 (R;US)

ROCKS
Blasting, graphical interfaces and Unix, 19:7370 (R;US)

ROCKY FLATS PLANT
Fire risk assessments at Rocky Flats Plant, 19:6285 (R;US)
MACCS usage at Rocky Flats Plant for consequence analysis of postulated accidents, 19:6284 (R;US)
Qualitative safety analysis of proposed material relocation options, 19:7507 (R;US)

ROCKY MOUNTAIN OVERTHRUST BELT
See WESTERN US OVERTHRUST BELT

ROCKY MOUNTAIN REGION

RODS (FUEL)
See FUEL RODS

ROMBACH PROCESS
See COAL GASIFICATION

ROOFS
Asbestos-cement panels test report, 100K Area, Hanford, Washington, 19:7086 (R;US)
Loose-fill insulation - Measurement of the thermal resistance, 19:6859 (R;SE;In Swedish)

ROTORS
See also TIPVANE ROTORS
Airfoil characteristics from a rotating wind turbine blade, 19:6560 (RA;GB)
Dynamics of composite rotors, with special reference to influence of imperfections and internal damping, 19:6582 (R;SE)
Experimental results on noise and airfoil performance of wind turbine rotor blades, 19:6553 (RA;GB)
Induced velocities for rotors in yaw: An extension of the blade element momentum method, 19:6550 (RA;GB)
On the measurement of inflow velocity and inflow angles with a spheric probe, 19:6547 (R;NL)
Sectional prediction of 3D effects for separated flow on rotating blades, 19:6556 (RA;GB)
Test FLEXTEETER: Volume 1: Main body of the report, 19:6543 (R;NL)
Unsteady flow past wind turbine rotor, 19:6562 (RA;GB)

RUBBER (NATURAL)
See NATURAL RUBBER

RUBBER INDUSTRY
Rubber compounding in the rubber processing industry, 19:6879 (I;GB)

RUBBERS
See also LATEX
NATURAL RUBBER
Chemi-microbial processing of waste tire rubber: A project overview, 19:6897 (R;US)

RUPTURE DISKS
See RELIEF VALVES

RURAL AREAS
Report of feasibility study on international-cooperation in high efficient energy conversion technology, 19:6829 (R;JP;In Japanese)

RUSSIAN FEDERATION
Communications received from members regarding the export of nuclear material and of certain categories of equipment and other material, 19:6314 (R;XA;In Arabic, Chinese, English, Spanis)
SPECTRUM analysis of multispectral imagery in conjunction with wavelet/KLT data compression, 19:7518 (R;US)

RUTHENIUM COMPOUNDS
Photochemistry in constrained spaces: Zeolites and layered double metal hydroxides: Progress report, August 1, 1992–September 15, 1993, 19:7128 (R;US)

S

S CODES
SYNTH: A spectrum synthesizer, 19:7740 (R;US)

S-1000 RESONANCES
See MESONS

SACCHARIDES
Instrumental development of novel detection and separation methods for capillary electrophoresis, 19:7096 (R;US)
Sweet sorghum cropping systems for on-farm ethanol or lactic acid, 19:6359 (RA;US)

SACCHAROMYCES CEREVISIAE
Engineering aspects of lignocellulosic biomass conversion to ethanol, 19:6394 (RA;US)

SAFEGUARDS
Advances in gamma-ray field instrumentation at Los Alamos, 19:6307 (R;US)
Lawrence Livermore National Laboratory safeguards and security quarterly progress report to the US Department of Energy: Quarter ending September 30, 1993, 19:6313 (R;US)
Safeguards applications of pattern recognition and neural networks, 19:6311 (R;US)

SAFETY
See also OCCUPATIONAL SAFETY
REACTOR SAFETY
Machine Protection System algorithm compiler and simulator, 19:7208 (R;US)

SAFETY (NUCLEAR)
See RADIATION PROTECTION

SAFETY (REACTOR)
See REACTOR SAFETY

SAFETY ENGINEERING
WESVA: A decision aid for comparing warhead advanced surety R&D options, 19:7381 (R;US)

SAFETY RODS
See SCRAM RODS

SAFETY VALVES
See RELIEF VALVES

SALMON
Juvenile passage program: A plan for estimating smolt travel time and survival in the Snake and Columbia Rivers, 19:7482 (R;US)
Proposed modifications to the Lower Mokelumne River Project, California: FERC Project No. 2916-004: Final environmental impact statement, 19:6782 (R;US)

SALT DEPOSITS
Fluid flow through very low permeability materials: A concern in the geological isolation of waste, 19:6235 (R;US)
Investigations on density and seismic velocity of rock salt from the Asse mine situ and in laboratory, 19:6163 (R;DE;In German)
Permeability and hydraulic diffusivity of Waste Isolation Pilot Plant repository salt inferred from small-scale brine inflow experiments, 19:6197 (R;US)

SALT TRANSPORT PROCESS
See PYROCHEMICAL REPROCESSING
SAMPLERS
Innovative directional and position specific sampling technique: Phase I: Final report, July 28, 1992–April 28, 1993, 19:7436 (R;US)
SANDIA LABORATORIES
In-situ containment and stabilization of buried waste: Annual report FY 1993, 19:7429 (R;US)
Organizational cultural assessment of the Sandia National Laboratories, 19:6769 (R;US)
Site environmental report for 1992, 19:6243 (R;US)
SANITARY LANDFILLS
Accounting for time-varying vadose-zone water fluxes caused by infiltration caps using the MEPAS transport, exposure, and risk assessment model, 19:6190 (R;US)
Adaptive sampling strategy support for the unlined chromic acid pit, chemical waste landfill, Sandia National Laboratories, Albuquerque, New Mexico, 19:7428 (R;US)
The sustainable landfill: A feasibility study to assess the potential of developing a bioreactor cell rotation landfill, 19:6365 (R;GB)
US EPA record of decision review for landfills: Sanitary landfill (740-G), Savannah River Site, 19:6300 (R;US)
SAPPHIRE
Adsorption and desorption studies of cesium on sapphire surfaces, 19:7039 (R;US)
Collaborative research on ion implantation of ceramics.: Foreign trip report, June 25–July 21, 1993, 19:7033 (R;US)
SATELLITES
Gamma Large Area Silicon Telescope (GLAST): Applying silicon strip detector technology to the detection of gamma rays in space, 19:7346 (R;US)
The validation of ATSR measurements with in situ sea temperatures, 19:7388 (R;US)
SAVANNAH RIVER PLANT
A comparison of four aerial radiological surveys of Par Pond and the surrounding area, Savannah River Site, Aiken, South Carolina: Dates of surveys: 1989–1992, 19:6236 (R;US)
Assessment of strontium in the Savannah River Site environment, 19:6299 (R;US)
Cavitation and two-phase flow characteristics of SRPR (Savannah River Plant Reactor) pump: Final report, 19:6721 (R;US)
Chemical pretreatment of Savannah River Site nuclear waste for disposal, 19:6212 (R;US)
Final examination of IDMS corrosion coupons, 19:6228 (R;US)
One-quarter scale separate effects Wyle counterpart tests, 19:6701 (R;US)
SRS ES and H Standards Compliance Program Implementation Plan: Revision 1, 19:6301 (R;US)
Savannah River Technology Center: Monthly report, May 1993, 19:6699 (R;US)
Tank 29 salt removal method using slurry pump agitation, 19:6232 (R;US)
[Monthly progress report for the Works Technical Department, July 1954], 19:6692 (R;US)
[Monthly progress report for the Works Technical Department, June 1954], 19:6691 (R;US)

[Environmental Hazards Assessment Program annual report, June 1992–June 1993]: Proposal for a new program leading to the Master of Science degree in environmental studies to be offered jointly by the Medical University of South Carolina and the University of Charleston, South Carolina, 19:6778 (R;US)
[Environmental Hazards Assessment Program annual report, June 1992–June 1993]: Needs assessment for the proposed masters degree program in environmental science at the Medical University of South Carolina: EHAP Volume 1, No. 2, 19:6777 (R;US)
SCLERA
See EYES
SCOTLAND
See UNITED KINGDOM
SCRAM RODS
Aging, maintenance and modernization of instrumentation at the ORNL High Flux Isotope Reactor, 19:6695 (RA;US)
SCRAP METALS
Control levels for residual contamination in materials considered for recycle and reuse, 19:6187 (R;US)
Fernald scrap metal recycling and beneficial reuse, 19:6161 (R;US)
SEALING MATERIALS
Study of the adhesion between paint film and metal spraying layer, 19:6956 (IA;JP;In Japanese)
SEAS
See also BALTIC SEA
PACIFIC OCEAN
Global atmospheric and ocean modeling on the connection machine, 19:7410 (R;US)
Simulation of the carbon cycle in the oceans: Annual report, Third year, September 15, 1992–September 14, 1993, 19:7467 (R;US)
The validation of ATSR measurements with in situ sea temperatures, 19:7388 (R;US)
SECONDARY BATTERIES
See ELECTRIC BATTERIES
SECONDARY COOLANT CIRCUITS
Auxiliary feedwater system risk-based inspection guide for the South Texas Project nuclear power plant, 19:6620 (R;US)
SECONDARY EMISSION
Characterization of highly charged ions by secondary electron emission, 19:7691 (R;FR)
SECTOR CYCLOTRON
See ISOCHRONOUS CYCLOTRONS
SECURITY
Lawrence Livermore National Laboratory safeguards and security quarterly progress report to the US Department of Energy: Quarter ending September 30, 1993, 19:6313 (R;US)

Travel to France for the International Organization for Standardization work on computer security techniques: Foreign trip report, October 10–22, 1993, 19:7955 (R;US)

SEDIMENTS
A summary of chemical and biological testing of proposed disposal of sediment from Richmond Harbor relative to the Deep Off-Shelf Reference Area, the Bay Farm Borrow Area, and the Alcatraz Environs Reference Area, 19:7455 (R;US)
The UFA method for site characterization and remediation, 19:7457 (R;US)

SEISMIC EFFECTS
Analysis of the LaSalle Unit 2 nuclear power plant: Risk Methods Integration and Evaluation Program (RMIEP): Volume 8, Seismic analysis, 19:6724 (R;US)

SEISMIC EVENTS
See also EARTHQUAKES
Seismic monitoring at The Geysers, 19:6501 (R;US)

SEISMIC WAVES
Efficient modeling in transversely isotropic inhomogeneous media, 19:7516 (R;US)

SELENIUM
Measurement of unsaturated hydraulic conductivity and chemical transport in Yucca Mountain Tuff: Milestone Report 3044-WBS1.2.3.4.1.4.1, 19:6237 (R;US)

SELENIUM 79
High-value use of weapons-plutonium by burning in molten salt accelerator-driven subcritical systems or reactors, 19:6172 (R;US)

SELENIUM COMPOUNDS
Measurement of elemental speciation by liquid chromatography – inductively coupled plasma mass spectrometry (LC-ICP-MS) with the direct injection nebulizer (DIN), 19:7097 (R;US)

SELF-POWERED GAMMA DETECTORS
Advances in gamma-ray field instrumentation at Los Alamos, 19:6307 (R;US)

SELOX PROCESS

SERVICE LIFE
Asbestos-cement panels test report, 100K Area, Hanford, Washington, 19:7086 (R;US)

SEWAGE SLUDGE
K-Area and Par Pond Sewage Sludge Application Sites groundwater monitoring report: Second quarter 1993, 19:7466 (R;US)
Light hydrocarbon liquids from dry raw sewage sludge, 19:6908 (RA;US)
Production of biomass/energy crops on phosphatic clay soils in central Florida, 19:6351 (RA;US)
Wood ash to treat sewage sludge for agricultural use, 19:6452 (RA;US)

SHALE MINING
See OIL SHALE MINING

SHALES
Solid-state NMR analysis of coals and shales from the Mesaverde Group, Green River Basin, Wyoming, 19:6045 (R;US)

SHELLS (CONTAINMENT)
See CONTAINMENT SHELLS

SHIELDING
A robust helium-cooled shield/blanket design for ITER, 19:7873 (R;US)
Optimization of the National Ignition Facility primary shield design, 19:7898 (R;US)

SHIELDS
Practical aspects of shielding high-energy particle accelerators, 19:7508 (R;US)
Surface impurity removal from DIII-D graphite tiles by boron carbide grit blasting, 19:7871 (R;US)

SHIP PROPULSION REACTORS
The qualification of NDT inspection personnel in the naval nuclear propulsion program, 19:7184 (R;US)

SHIPMENT
See TRANSPORT

SHIPS
Test with combined electric, diesel and wind propulsion of a small fishing boat. Continued testing of electric traction, 19:6863 (R;SE;In Swedish)

SHOCK (THERMAL)
See THERMAL SHOCK

SHOCK WAVES
See also DETONATION WAVES
A modified finite element procedure for underwater shock analysis, 19:7160 (R;US)
Experimental and numerical investigation of shock wave propagation through complex geometry, gas continuous, two-phase media, 19:7822 (R;US)

SHORT ROTATION CULTIVATION
Public perceptions of short rotation coppice, 19:6445 (R;GB)

SHOWER COUNTERS
A Full-Acceptance Detector (FAD) for the SSC: An Overview, 19:7347 (R;US)
Beam solid state device (BSSD) performance in the test run June–July 1984, 19:7304 (R;US)
CsI electromagnetic calorimeter development for a low or medium energy e^+e^- collider, 19:7348 (R;US)
Pattern recognition in the GEM central tracker at luminosity of 10^{33} $cm^{-2}s^{-1}$, 19:7324 (R;US)

Progress report of a research program in experimental and theoretical high energy physics, 1 June 1992–May 31, 1993, 19:7311 (R;US)
Proposal for the completion of outstanding work on the installation scheduling and alignment of the SDC central calorimeter, 19:7233 (R;US)
Proposal for the completion of outstanding work on the mechanical absorber structure of SDC barrel electromagnetic calorimeter, 19:7299 (R;US)
Radiation hardness of 3HF-tile/O2-WLS-fiber calorimeter, 19:7319 (R;US)
Real-time tracking with a 3D-Flow processor array, 19:7349 (R;US)
SDC tracking capabilities for B physics, 19:7350 (R;US)
SSC and G-2 calorimeter and optical calibration: Progress report, September 15, 1992–September 14, 1993, 19:7310 (R;US)
Selection and characterization of lead alloys for use in the SDC EM Calorimeter, 19:7298 (R;US)
Simulation of the GEM silicon central tracker using GEANT, 19:7325 (R;US)
Theoretical and experimental studies of elementary physics: Annual technical progress report, November 1, 1992–October 31, 1993, 19:7623 (R;US)
Travel to Switzerland to perform data analysis, provide advice concerning the electromagnetic calorimeter level-1 power monitoring system, and particpate in the L3 experiment: Foreign trip report, June 14–30, 1993, 19:7340 (R;US)
[Continuation request for E864 capital grant, FY 1994]: [Semiannual technical progress report, June 1, 1993–November 14, 1993] (High Energy Detection), 19:7312 (R;US)

SHRUBS
Herbaceous energy crops in humid lower South USA, 19:6354 (RA;US)
Understory biomass from southern pine forests as a fuel source, 19:6340 (RA;US)

Nanoscale plasticity in silica glass, 19:7041 (R;US)
Simulations of terrestrial in-situ cosmogenic-nuclide production, 19:7555 (R;US)
Sol-gel derived silica/siloxane composite materials: The effect of loading level and catalyst activity on silica domain formation, 19:7079 (R;US)

SILICON SEMICONDUCTOR DETECTORS
See SI SEMICONDUCTOR DETECTORS

SILICON SOLAR CELLS
Continuous roll-to-roll a-Si photovoltaic manufacturing technology: Annual subcontractor report, 1 April 1992–31 March 1993, 19:6471 (R;US)
Hydrogen and deuterium in multi-crystalline silicon wafers and solar cells, 19:6467 (R;NL)
Hydrogen and deuterium in semi-crystalline silicon wafers and solar cells, 19:6468 (R;NL)
PV Cz silicon manufacturing technology improvements: Annual subcontract report, 1 April 1992–31 March 1993, 19:6472 (R;US)
Silicon-Film™ photovoltaic manufacturing technology: Semiannual subcontract report, 15 November 1992–15 May 1993, 19:6475 (R;US)

Thin EFG octagons: Annual subcontract report, 1 April 1992–31 March 1993, 19:6473 (R;US)
Travel to Japan to evaluate photovoltaic developments in Japan, Australia, and Europe: Foreign trip report, November 16–26, 1993, 19:6479 (R;US)

SILOXANES
Sol-gel derived silica/siloxane composite materials: The effect of loading level and catalyst activity on silica domain formation, 19:7079 (R;US)

SILVER
RHEED studies of the nucleation, growth, and mobility of Ag atoms on the Si(111)7 x 7 surface, 19:7755 (R;US)

SIMS
See MASS SPECTROSCOPY

SIMULATION
See also COMPUTERIZED SIMULATION
PLASMA SIMULATION
Center for computation and visualization of geometric structures: [Annual], Progress report, 19:7911 (R;US)

SIMULATORS
Geothermal development promotion survey.: Outline of Oguni area survey report on the development of a geothermal reservoir evaluation method, 19:6500 (I;JP;In Japanese)

SINGLE CRYSTALS
See MONOCRYSTALS

SITE CHARACTERIZATION
Adaptive sampling strategy support for the unlined chromic acid pit, chemical waste landfill, Sandia National Laboratories, Albuquerque, New Mexico, 19:7428 (R;US)
Quantitative in situ uranium contaminant mapping using high-resolution gamma-ray spectrometry and beta scintillation counting, 19:6195 (R;US)
Site characterization and hazard assessment criteria for natural phenomena hazards at DOE sites, 19:6288 (R;US)
The UFA method for site characterization and remediation, 19:7457 (R;US)

SITE REHABILITATION
See REMEDIAL ACTION

SITE SURVEYS
See SITE CHARACTERIZATION

SKYLIGHTS
Evaluation of solar gain through skylights for inclusion in the SP53 residential building loads data base, 19:6486 (R;US)

SLC
See STANFORD LINEAR COLLIDER

SLC DETECTORS
See STANFORD LINEAR COLLIDER DETECTOR

SLOVAK REPUBLIC
Text of the agreement between the Czechoslovak Socialist Republic and the Agency for the application of safeguards in connection with the treaty on the non-proliferation of nuclear weapons: Succession by the Slovak Republic, 19:6923 (R;XA;In Arabic, Chinese, English, Spanis)

SLUDGES
See also SEWAGE SLUDGE
Development of biological coal gasification (MicGas process): 12th Quarterly report, 19:6022 (R;US)
F/H seepage basin groundwater influent, effluent, precipitated sludge characterization task technical plan, 19:6217 (R;US)
Final examination of IDMS corrosion coupons, 19:6228 (R;US)
Process chemistry for the pretreatment of Hanford tank wastes, 19:6184 (R;US)
The Acimet® Process: An innovative approach to biogasification of municipal sludge, 19:6375 (RA;US)

SLUGS (FUEL)
See FUEL RODS

SLURRIES
See also FUEL SLURRIES
Development of a catalytic system for gasification of wet biomass, 19:6418 (RA;US)

SLURRIES (FUEL)
See FUEL SLURRIES

SMECTITE
Macrostructure of smectite - water systems: influence of anionic polyelectrolytes upon organization of montmorillonite suspensions, 19:6107 (R;FR;In French)

SMELTERS
Development of methods for evaluating options for improving air quality in Santiago, Chile and its environs: Final report, 19:7409 (R;US)

SMES
See SUPERCONDUCTING MAGNETIC ENERGY STORAGE

SNAILS
Effect of snails (Elimia clavaeformis) on phosphorus cycling in stream periphyton and leaf detritus communities, 19:7472 (R;US)

SNR REACTOR
LMFBR source term experiments with rupture disk discharge under sodium, 19:6626 (R;DE;In German)
Travel to Germany to examine equipment from the SNR-300 plant: Foreign trip report, August 5–17, 1991, 19:6711 (R;US)
Travel to the Windscale and Dounreay sites in the United Kingdom to discuss the details of SNR-300 fuel assembly modification: Foreign trip report, July 12–19, 1991, 19:6625 (R;US)

SNR-1 REACTOR
See SNR REACTOR

SNR-300 REACTOR
See SNR REACTOR

SODIUM 20
Beta-delayed (alpha) particle emission; A probe of weak interactions in nuclei, 19:7698 (RA;US)

SODIUM HYDRIDES
Electronic charge distribution of sodium substituted palladium hydride, $NaPd_3H_2$, 19:7038 (R;US)

SOFC
See SOLID ELECTROLYTE FUEL CELLS

SOILING
See SURFACE CONTAMINATION

SOILS
Alpha Detection
Long-Range Alpha Detector (LRAD) sensitivity to beta contamination and soil moisture, 19:7329 (R;US)
Cleaning
In situ bioremediation via horizontal wells: Revision 1, 19:7463 (R;US)
Contamination
In situ vitrification: Providing a comprehensive solution for remediation of contaminated soils, 19:6185 (R;US)
Measuring program of the Federal Republic of Germany: Results of the environment measurements in Russia, Belarus and Ukraine from May 12 to September 26, 1992, 19:7448 (R;DE;In German)
Possible differences in biological availability of isotopes of plutonium: Report of a workshop, 19:7459 (R;US)
Radioactive contamination in liquid wastes discharged to ground at separations facilities through June 1960, 19:6164 (R;US)
Decontamination
100 area excavation treatability test plan, 19:6267 (R;US)
Soil washwater treatment system operating procedure, 19:6296 (R;US)
Surface and subsurface cleanup protocol for radionuclides, Gunnison, Colorado, UMTRA project processing site: Final report: Revision 1, 19:6252 (R;US)
Fluid Flow
LAS CRUCES DATABASE: Las Cruces Trench Site Database, Vadose Model, 19:7920 (CM;US)
Heating
Investigation of electric fields for low-temperature treatment of soils and liquids, 19:7456 (R;US)
Hydraulic Conductivity
A stochastic model for two-phase flow in heterogeneous porous media, 19:7176 (RA;DK)
LAS CRUCES DATABASE: Las Cruces Trench Site Database, Vadose Model, 19:7920 (CM;US)
The UFA method for site characterization and remediation, 19:7457 (R;US)

Moisture
Integrated production of warm season grasses and agroforestry for biomass production, 19:6349 (RA;US)
Permeability
A stochastic model for two-phase flow in heterogeneous porous media, 19:7176 (RA;DK)
Radionuclide Migration
A correlation between soil descriptions and ^{226}Ra concentrations in Florida soils, 19:7440 (R;US)
Distribution of uranium-bearing phases in soils from Fernald, 19:6247 (R;US)
Effects of vegetation of radon transport processes in soil: The origins and pathways of ^{222}Rn entering into basement structures: Final report, March 15, 1987–May 15, 1993, 19:7432 (R;US)
Estimating baseline risks from biouptake and food ingestion at a contaminated site, 19:7427 (R;US)
Remedial Action
Direct Sampling Ion Trap Mass Spectrometry, 19:7430 (R;US)
In situ vitrification: Providing a comprehensive solution for remediation of contaminated soils, 19:6185 (R;US)
Quantitative in situ uranium contaminant mapping using high-resolution gamma-ray spectrometry and beta scintillation counting, 19:6195 (R;US)
Significance of radon exposures in developing cleanup criteria for radium-contaminated soil at the Weldon Spring Site, 19:6248 (R;US)
Sampling
Innovative directional and position specific sampling technique: Phase I: Final report, July 28, 1992–April 28, 1993, 19:7436 (R;US)
SOLAR AIR HEATERS
Development of solar air heaters, 19:6489 (R;DK;In Danish)
SOLAR ARCHITECTURE
Pilot project for solar house Egebjerggaard, 19:6487 (R;DK;In Danish)
Travel to France to participate in the Empirical Validation Study: Foreign trip report, September 20–23, 1993, 19:6845 (R;US)
SOLAR BATTERIES
See SOLAR CELL ARRAYS
SOLAR CELL ARRAYS
Construction of a computer-assisted experimental facility for recording the voltage-current characteristic of amorphous solar modules, 19:6481 (R;DE;In German)
Research on high-efficiency, large-area, $CuInSe_2$-based thin-film modules: Annual subcontract report, 1 May 1992–15 Aug 1993, 19:6476 (R;US)
SOLAR CELLS
See also COPPER SELENIDE SOLAR CELLS
GALLIUM ARSENIDE SOLAR CELLS
GALLIUM PHOSPHIDE SOLAR CELLS
INDIUM PHOSPHIDE SOLAR CELLS
INDIUM SELENIDE SOLAR CELLS
SILICON SOLAR CELLS
Continuous roll-to-roll a-Si photovoltaic manufacturing technology: Annual subcontractor report, 1 April 1992–31 March 1993, 19:6471 (R;US)
Photovoltaic performance and reliability workshop, 19:6469 (R;US)
Semiannual technical progress report: Advanced development of PV encapsulants: Annual subcontract report, 1 January 1993–30 June 1993, 19:6470 (R;US)
SOLAR CENTRAL RECEIVERS
See CENTRAL RECEIVERS
SOLAR COLLECTORS
See also FLAT PLATE COLLECTORS
SOLAR AIR HEATERS
Data bases and specifications for solar collector materials, 19:6492 (R;SE;In Swedish)
Solar collector constructed of welded plastic foils, 19:6490 (R;DK;In Danish)
SOLAR CONCENTRATORS
See also COMPOUND PARABOLIC CONCENTRATORS
Development of a 2f optical performance measurement system, 19:6491 (R;US)
SOLAR ENERGY
Travel to Hungary to participate in the International Solar Energy Society Solar World Congress 1993: Foreign trip report, August 19, 1993–September 3, 1993, 19:6466 (R;US)
SOLAR ENERGY CONVERSION
Performance of the Southern California Edison Company Stirling dish, 19:6478 (R;US)
SOLAR ENERGY RESEARCH INSTITUTE
Interagency Advanced Power Group, Solar Working Group: Meeting minutes, 19:6464 (R;US)
Overview of the geothermal energy conversion efforts at NREL, 19:6517 (RA;US)
SOLAR HEATING
Evaluation of solar gain through skylights for inclusion in the SP53 residential building loads data base, 19:6486 (R;US)
SOLAR NEUTRINOS
The status of the solar neutrino problem, 19:7548 (R;US)
SOLAR POWER PLANTS
Isothermal corrosion testing of steels in molten nitrate salts, 19:7003 (R;US)
Performance of the Southern California Edison Company Stirling dish, 19:6478 (R;US)
SOLAR RADIATION
Initial ultraviolet-B intensity data at Lawrence Livermore National Laboratory, 19:7513 (R;US)
SOLDERED JOINTS
Microstructural development and mechanical behavior of eutectic bismuth-tin and eutectic indium-tin in response to high temperature deformation, 19:6982 (R;US)
SOLID ELECTROLYTE FUEL CELLS
Characterization of solid oxide fuel cell electrodes by impedance spectroscopy and I-V characteristics, 19:6838 (R;NL)
SOLID ELECTROLYTES
Characterization of solid oxide fuel cell electrodes by impedance spectroscopy and I-V characteristics, 19:6838 (R;NL)
SOLID SCINTILLATION DETECTORS
Detection of 40-2000 MeV neutrons at the intensive gamma-ray background by means of a CsJ(Tl)-detector during the synchrotron U-70 experiment, 19:7338 (R;RU;In Russian)
High sensitivity, low profile neutron detector for safeguards measurements, 19:6926 (R;US)
SOLID STATE PHYSICS
Neutron scattering: Lecture notes of the first summer school on neutron scattering, 19:7760 (I;CH)
SOLID WASTES
See also WOOD WASTES
An assessment of thermochemical conversion systems for processing biomass and refuse, 19:6366 (R;GB)
Energy supply of food processing plants and breweries from its specific solid wastes, 19:6370 (RA;US)
MSW and biomass to liquid fuels by packaged liquefaction plants, 19:6907 (RA;US)
Process and design considerations for the anaerobic digestion of municipal solid waste, 19:6369 (RA;US)
SOLIDS
Effective elastic properties of cracked solids, 19:6938 (RA;US)
Fundamental aspects of brittle damage processes – discrete systems, 19:6936 (RA;US)
One-component surface waves in anisotropic linear elastic media, 19:6935 (RA;US)
The Preisach model with stochastic input as a model for aftereffect, 19:6939 (RA;US)
Travel to Granada, Spain for discussions on materials that exhibit complex relaxations: Foreign trip report, June 21–17, 1993, 19:7053 (R;US)
Travel to Greece and Germany for meetings on the electronic structure of solids and complex systems: Foreign trip report, September 16–October 1, 1993, 19:7751 (R;US)
SONDES
See PROBES
SORBENT INJECTION PROCESSES
Confined zone dispersion flue gas desulfurization demonstration: Quarterly report No. 9, November 17, 1992–February 16, 1993, 19:6590 (R;US)

SORGHUM
Fast pyrolysis of sweet soghum bagasse in a fluidized bed, 19:6387 (RA;US)
SOURCE TERMS
XSOR codes users manual, 19:6725 (R;US)
SOUTH TEXAS PROJECT-1 REACTOR
Auxiliary feedwater system risk-based inspection guide for the South Texas Project nuclear power plant, 19:6620 (R;US)
SOUTH TEXAS PROJECT-2 REACTOR

THERMAL SHOCK
Thermal shock testing for sprayed coating, 19:6952 (IA;JP;In Japanese)

THERMAL STRESSES
Thermal shock testing for sprayed coating, 19:6952 (IA;JP;In Japanese)

THERMIONIC FUEL ELEMENTS
Design and performance of the UO_2 fuel for the Topaz-II reactor, 19:6634 (R;US)
Technical accomplishments of the Thermionic Fuel Element Verification Program, 19:6632 (R;US)

THERMIONIC REACTOR EXPERIMENT (TREX)
See THERMIONIC REACTORS

THERMIONIC REACTORS
SPACE-R thermionic space nuclear power system design and technology demonstration: Test plans for INERTEK experimental tasks: CDRL No. 5 and No. 9, 19:6631 (R;US)
Technical accomplishments of the Thermionic Fuel Element Verification Program, 19:6632 (R;US)

THERMOLUMINESCENT DOSEMETERS
Monte Carlo computed field parameters for design of photon personal dosemeters, 19:7313 (R;IT)

THERMOMETERS
Aging, maintenance and modernization of instrumentation at the ORNL High Flux Isotope Reactor, 19:6695 (RA;US)
Effects of normal aging on calibration and response time of nuclear plant RTDs and pressure sensors, 19:6662 (RA;US)
In-situ measurement of response time of RTDs and pressure transmitters in nuclear power plants, 19:6660 (RA;US)

THERMONUCLEAR FUELS
Application of railgun principle to high-velocity hydrogen pellet injection for magnetic fusion reactor fueling: Progress report, October 1, 1992–September 30, 1993, 19:7853 (R;US)

THERMONUCLEAR REACTOR MATERIALS
Effect of loading mode on the fracture toughness of a reduced activation ferritic/martensitic stainless steel, 19:7892 (R;US)
Fundamentals of defect production, 19:7893 (R;US)
Helium production cross sections for fusion-energy neutrons: Final report, [March 1, 1979–December 31, 1986], 19:7851 (R;US)
Modeling defect production in high energy collision cascades, 19:7891 (R;US)
Participation in the IEA workshop on low activation materials: Foreign trip report, April 8–12, 1991, 19:7863 (R;US)
Relationship between swelling and irradiation creep in cold-worked PCA stainless steel irradiated to ~178 dpa at ~400°C, 19:7889 (R;US)
Travel to Germany and Italy for meetings on fusion reactor materials: Foreign trip report, September 21–October 8, 1993, 19:7868 (R;US)

THERMONUCLEAR REACTOR WALLS
See also FIRST WALL
ARIES-IV Nested Shell Blanket Design, 19:7874 (R;US)

THERMONUCLEAR REACTORS
See also ION BEAM FUSION REACTORS
LASER FUSION REACTORS
STEADY-STATE FUSION REACTORS
Determination of atomic data pertinent to the Fusion Energy Program: Progress report for FY 92, 19:7805 (R;US)
On physical aspects of a thermonuclear reactor with a vacuum gap between plasma and first wall, 19:7888 (R;RU;In Russian)
Participation in the Second International Symposium on Fusion Nuclear Technology: Foreign trip report, May 31–June 12, 1991, 19:7857 (R;US)

THERMONUCLEAR WEAPONS
See NUCLEAR WEAPONS

THERMOPLASTICS
SESAME equation of state number 8020: Polyetheretherketone (PEEK), 19:7057 (R;US)

THERMOSYPHONS
On the deterministic and chaotic flow in a thermal convection loop, 19:7180 (R;SE)

THF
See TETRAHYDROFURAN

THIN FILMS
In situ x-ray reflectivity measurements of thin film structural evolution, 19:6998 (R;US)
Magnetoresistance of films and strips with the diffuse surface scattering, 19:7540 (R;XA)
Microscopic image processing system for measuring nonuniform film thickness profiles: Image scanning ellipsometry, 19:7166 (RA;US)
RHEED studies of the nucleation, growth, and mobility of Ag atoms on the Si(111)7 x 7 surface, 19:7755 (R;US)
Stress-induced roughening instabilities along surfaces of piezoelectric materials, 19:7009 (RA;US)

THOMSON SCATTERING
Photon counting spectroscopy as done with a Thomson scattering diagnostic, 19:7800 (R;US)

THORIUM 230
Surface and subsurface cleanup protocol for radionuclides, Gunnison, Colorado, UMTRA project processing site: Final report: Revision 1, 19:6252 (R;US)
THORIUM B
See LEAD 212
THORIUM COMPLEXES
Variation of stability constants of thorium and uranium oxalate complexes with ionic strength, 19:7127 (R;US)
THORIUM D
See LEAD 208
THORON
See RADON 220
TIDAL POWER
Technology assessment and the severn barrage, 19:6832 (RA;DK)
The Severn Barrage project (United Kingdom), 19:6833 (RA;DK)
TIDAL POWER PLANTS
Tidal regimes and salt marshes - the River Hamble analogue, 19:6536 (R;GB)
TIME-REVERSAL INVARIANCE
See T INVARIANCE
TIN 116 TARGET
Nuclear chemistry progress report, 19:7710 (R;US)
TIN 124 TARGET
Nuclear chemistry progress report, 19:7710 (R;US)
TIN 126
High-value use of weapons-plutonium by burning in molten salt accelerator-driven subcritical systems or reactors, 19:6172 (R;US)
TIN ALLOYS
A theoretical study of ordering phenomena in K-In and K-Sb molten alloys, 19:7543 (R;XA)
Reference electrodes for solid polymer electrolytes, 19:6759 (R;US)
Research into the microstructure and mechanical behavior of eutectic Bi-Sn and In-Sn, 19:6979 (R;US)
TIN COMPOUNDS
Measurement of elemental speciation by liquid chromatography – inductively coupled plasma mass spectrometry (LC-ICP-MS) with the direct injection nebulizer (DIN), 19:7097 (R;US)
TIPVANE ROTORS
A hybrid wake model for HAWT, 19:6555 (RA;GB)
Investigation of teeter stability of stalled rotors, 19:6557 (RA;GB)
Modification of airfoil characteristics by the three dimensional potential flow of horizontal axis windturbine rotors, 19:6552 (RA;GB)
Wind tunnel measurements on a stalled horizontal axis wind turbine rotor, 19:6554 (RA;GB)
TIRES
Chemi-microbial processing of waste tire rubber: A project overview, 19:6897 (R;US)
TISSUE-EQUIVALENT MATERIALS
Monte Carlo computed field parameters for design of photon personal dosemeters, 19:7313 (R;IT)
TITANIUM
Catalytic fabric filtration for simultaneous NO_x and particulate control: Quarterly technical progress report, April 1–June 30, 1993, 19:6589 (R;US)
TITANIUM ALLOYS
Effect of nitrocarburizing on shape of titanium alloy parts, 19:7008 (R;US)
TITANIUM NITRIDES
Measurements of the elastic constants of superlattice films by line-focus acoustic microscopy, 19:7010 (RA;US)

Charged-Particle Transport
A 3-D Fokker-Planck code for studying parallel transport in tokamak geometry with arbitrary collisionalities and application to neoclassical resistivity, 19:7834 (R;CH)
Travel to Caderache, France for visit with the Lower Hybrid Current Drive Modeling Group: Foreign trip report, June 19–28, 1993, 19:7820 (R;US)
Electron Temperature
Profile constraining mechanism for T_e profile invariance in tokamaks, 19:7878 (R;DE)
Feedback
Active feedback stabilization of axisymmetric modes in highly elongated tokamak plasmas, 19:7830 (R;CH)
H-Mode Plasma Confinement
Travel to Japan for the Fourth IAEA Technical Committee meeting on H-mode physics: Foreign trip report, October 12–19, 1993, 19:7837 (R;US)
Icr Heating
Travel to Japan to attend the US-Japan RF Heating Technology Workshop: Foreign trip report, February 24–March 9, 1991, 19:7862 (R;US)
Joule Heating
The isotope effect in ASDEX, 19:7877 (R;DE)
Meetings
Participation in the US-Japan workshop on physics issues for steady state tokamaks: Foreign trip report, June 27–July 3, 1993, 19:7865 (R;US)
Travel to France, Germany and the United Kingdom to participate in fusion technology program reviews and planning meetings: Foreign trip report, October 26–November 6, 1991, 19:7855 (R;US)
Mhd Equilibrium
Passive stabilization of MHD instabilities at high βn in the HBT-EP Tokamak, 19:7804 (R;US)
Microwave Amplifiers
Travel to England for conference on gyrotron and high power microwave research: Foreign trip report, September 4–11, 1993, 19:7867 (R;US)
Non-Inductive Current Drive
Fast wave current drive technology development at ORNL, 19:7796 (R;US)
Review of tokamak experiments on direct electron heating and current drive with fast waves, 19:7823 (R;US)
Theoretical reversed field pinch and tokamak studies: Progress report, November 1, 1992–June 10, 1993, 19:7803 (R;US)
Travel to Japan for workshop on RF Heating and Current Drive in Confinement Systems Tokamaks: Foreign trip report, November 16–22, 1991, 19:7819 (R;US)
Pellet Injection
High-speed repetitive pellet injector for plasma fueling of magnetic confinement fusion devices, 19:7847 (R;US)
The new centrifuge high-speed pellet injector for ASDEX Upgrade, 19:7876 (R;DE)
Plasma Confinement
The isotope effect in ASDEX, 19:7877 (R;DE)
Plasma Diagnostics
Heavy Neutral Beam Probe for edge plasma analysis in Tokamaks: Annual progress report, December 1, 1992–November 30, 1993, 19:7810 (R;US)
Plasma Heating
Cyclotron subharmonics resonant (CSR) heating, 19:7839 (R;US)
Travel to Japan for workshop on RF Heating and Current Drive in Confinement Systems Tokamaks: Foreign trip report, November 16–22, 1991, 19:7819 (R;US)
Plasma Instability
Passive stabilization of MHD instabilities at high βn in the HBT-EP Tokamak, 19:7804 (R;US)

Research Programs
Fusion reactor systems studies: Progress report, November 1, 1992–October 31, 1993, 19:7854 (R;US)
Stability
Active feedback stabilization of axisymmetric modes in highly elongated tokamak plasmas, 19:7830 (R;CH)
TOKAMAK FUSION TEST REACTOR
See TFTR TOKAMAK
TOP ACCIDENTS
See TRANSIENT OVERPOWER ACCIDENTS
TOP PARTICLES
Energy distribution of the leptons in top decay to charged Higgs, 19:7669 (R;US)
New particle searches at CDF, 19:7626 (R;US)
Report of the subgroup on the top quark, 19:7654 (R;US)
Search for the top quark in the single lepton + jets channel at D0, 19:7636 (R;US)
The CDF SVX II detector upgrade, 19:7317 (R;US)
Top quark search at CDF, 19:7628 (R;US)
TOPAZ REACTOR
Design and construction of the TOPAZ II reactor system real-time dynamic simulator, 19:6636 (R;US)
TORE SUPRA
See TORE SUPRA TOKAMAK
TORE SUPRA TOKAMAK
Travel to France to discuss with the Tore Supra staff the repair and reinstallation of the Phase III Outboard Limiter: Foreign trip report, September 19–25, 1993, 19:7866 (R;US)
TORNADOES
Title I wind/tornado design guidelines for new production reactors, 19:6743 (R;US)
TOTAL-ABSORPTION SPECTROMETERS

Great Basin paleoenvironmental studies project: Technical progress report, second quarter, September–November, 1993, 19:6154 (R;US)
Great Basin paleoenvironmental studies project: Technical progress report: First quarter (January–August 1993), 19:6153 (R;US)
Measurement of unsaturated hydraulic conductivity and chemical transport in Yucca Mountain Tuff: Milestone Report 3044-WBS1.2.3.4.1.4.1, 19:6237 (R;US)
The impact of repository heat on thermo-hydrological performance at Yucca Mountain, 19:6201 (R;US)

Z

Z NEUTRAL BOSONS
A measurement of $R_b = \Gamma(Z^0 \rightarrow b\bar{b})/\Gamma(Z^0 \rightarrow \text{hadrons})$ at SLD, 19:7650 (R;US)
A study of jet handedness at the Z^0 resonance, 19:7651 (R;US)
An analysis of monojet data in $p\bar{p}$ collisions at $\sqrt{s} = 1.8$ TEV, 19:7618 (R;US)
ZEA MAYS
See MAIZE
ZEEMAN EFFECT
Zeeman laser interferometry for detection and chemical analysis, 19:7104 (R;US)
ZEEMAN RESONANCE
See ZEEMAN EFFECT
ZEEMAN SPECTRUM
See ZEEMAN EFFECT
ZEEMAN TRANSITION
See ZEEMAN EFFECT
ZHURAVLEV PROCESS
See COAL GASIFICATION
ZINC
Cracking of textured zinc coating during forming process, 19:6980 (R;US)
ZINC DISTILLATION PROCESS
See PYROCHEMICAL REPROCESSING
ZINC SULFIDES
Characterization of Zns-GaP Naon-composites, 19:7056 (R;US)
ZIRCONIUM
Effect of precipitate structure on hot deformation of Al-Mg-Mn alloys, 19:6996 (R;US)
ZIRCONIUM 90
The widths of magnetic twist modes, 19:7679 (R;RU)
ZIRCONIUM BASE ALLOYS
Materials science experiments in the ISOSPIN laboratory, 19:6933 (RA;US)
ZIRCONIUM OXIDES
Development of a catalyst for conversion of syngas-derived materials to isobutylene: Technical progress report No. 4, January 1, 1992–March 30, 1992, 19:6024 (R;US)
Low severity upgrading of F-T waxes with solid superacids: Quarterly report, June 1, 1993–August 31, 1993, 19:6036 (R;US)
Plasma spraying of Ni/ZrO2 mechanically alloyed composite powders, 19:7022 (IA;JP;In Japanese)

Contract Number Index

Numbers assigned to DOE contracts announced in documents in this publication are listed. Contract numbers are sorted alphanumerically and list the primary corporate author of the document cited, the citation number, and the report number or other document identification.

Contract No.	Abstract No.	Report No.
AC02-76CH00016	Lawrence Livermore National Lab., CA (United States)

Report Number Index

The report number index consists of the alphanumeric identifiers assigned to report literature as well as patent and conference literature cited in this publication. Entries provide the abstract number; the source(s) of availability of the document; the GPO file prefix for GPO depository library documents; the order number for OSTI and NTIS report ordering purposes; and, if the document was distributed under the DOE distribution program, the category number is shown for paper copy (PC), microfiche (MF), or no distribution (ND). These categories are included to assist DOE librarians in responding to requests for reports in their collections. The index also lists secondary numbers, with the corresponding abstract numbers and cross-references to other identifying numbers.

ORDER FORM

DOE and DOE Contractors: Fill in Parts I, II, and IV. **Others:** Fill in Parts I, III, and IV. Mark appropriate blanks in Part IV to indicate quantity and form (microfiche or paper copy).

I. SHIPPING AND PAYMENT INFORMATION

Ordering Address

Name _____ Telephone _____

Address _____

City _____ State _____ Zip _____

Shipping Address (if different from above)

Name _____

Address _____

City _____ State _____ Zip _____

_____

SIGNATURE (Required to validate ALL orders)

II. OSTI ORDERS (DOE and DOE contractors can order from OSTI.)

☐ Charge OSTI deposit account no. _____

☐ Charge to my ☐ VISA ☐ Mastercard

_____ _____

Account Number **Card expiration date**

Mail orders to: U.S. Department of Energy
Office of Scientific and Technical Information
P.O. Box 62
Oak Ridge, TN 37831

III. NTIS ORDERS

☐ Charge NTIS deposit account no. _____

☐ Check/Money Order enclosed for $ _____

☐ Charge to my ☐ American Express ☐ VISA ☐ Mastercard

_____ _____

Account Number **Card expiration date**

☐ Ship and Bill (see below for restrictions) _ _ _ _ _ _ _ _ _

Employer identification number (9 digits) —

Purchase Order number _____

Phone number of billing office _____
(Required for Ship & Bill orders)

Ship & Bill service is restricted to North American business locations for an extra $7.50 per order (or per Custom Search). The business' employer identification number plus the phone number of the office paying the bill are required to process these requests. A late payment charge will be applied to billings more than 30 days overdue. Prepaying, using an NTIS Deposit Account or a charge account, speeds order processing. Be sure payment and order are sent together. Checks, payable to NTIS, must be in U.S. dollars.

Mail orders to: U.S. Department of Commerce
Technology Administration
National Technical Information Service
Springfield, VA 22161

IF NO METHOD OF PAYMENT IS INDICATED, YOUR ORDER WILL BE RETURNED TO YOU AS A PRICE QUOTE UNPROCESSED.

IV. SELECTIONS

Order number _____ Report number _____

Abstract number (with vol., issue) _____

No. of fiche _____ No. of paper copies _____

Order number _____ Report number _____

Abstract number (with vol., issue) _____

Federal Depository Library Program

As a result of an agreement between the U.S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are not sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.
